Reversing Your Chorioretinitis (Uveitis)

Ask yourself this; did Chorioretinitis (Uveitis) exist in the times of our ancestors, centuries ago, or was it born in recent times? Where did it come from? How did we find ourselves diagnosed with it? Has it occurred to you that the foods that you consume on a daily basis directly affect your health? Would you like to know more about the one protocol that has worked for us, time and time again, in increasing our health to a point where "disease" can no longer exist? Through reversing our own chronic diseases and conditions - ranging from severe autoimmune, neurological, digestive - all the way to rare genetic conditions, we noticed a commonality during our healing journeys. We discovered a protocol that supercharged our health and subsequently worked well in the removal of any condition, disease, infection, abnormality, addiction, mental health condition - or any other label that you may come across. Through producing this series of information-assisted journals, our goal has been to reach you directly and share our experiences with you, with the aim of giving you hope. Regardless of what you have been diagnosed/labeled with - if applied correctly, you will experience significant positive changes. This journal has been broken down into two parts - the first part being information-based, and the second part being an assisted journal area for you to document, track and journal your personal daily progress, whilst being given helpful tips along the way. We didn't want to release just another "information overloaded" book which the reader does not benefit from or take action on immediately. Through this interactive and simplified approach found within this series of journals, you will achieve your health goals effectively. Welcome to the world of improved health and healing. Good luck on your journey.

30 Day Journal & Tracker

After relentlessly studying the teachings of legendary healers, such as Dr Arnold Ehret and Dr Robert Morse, we set out on a journey of healing ourselves and reversing our very own conditions. Within our group, we were suffering from a range of diverse diseases and conditions, including Heart Disease, Kidney Disease, Diabetes, a variety of Autoimmune Diseases and Leaky Gut. During our healing journeys, we formed a journal that we would use on a daily basis, and this helped us to incorporate all of the lessons and tips that we had learnt and refined along the way - in short, it acted as a check list. It was important to us to not miss out on any knowledge and practices that had served us well. This journal is designed to guide and support you through your own journey with the core healing protocols included within its theme. One of the key conclusions that we reached through our individual journeys was that whether you are a sufferer of Chorioretinitis (Uveitis), or any other condition, the same protocol that we used applies. However, dependant on the severity of your Chorioretinitis (Uveitis), you may need to follow the protocols for longer, using specific herbs in order to achieve positive results, but you can make your own adjustments as you learn more. The great news is that all information and resources are readily available for personal study and application. Dr Arnold Ehret's books can be downloaded freely if you search for "arnold ehret books pdf". Visit rawfigs.com for Dr Robert Morse videos which can be searched through by keywords via the search bar. With this journal and your newly acquired knowledge, we trust that you will also soon start to experience the positive results that we did, along with the many others that send us regular positive feedback. We wish you all the best. The Health Formation Team

Uveitis

Suffering from a variety of conditions, we formed a small group of individuals that were also struggling, and we helped each other remain accountable as we healed ourselves naturally. How did we do this? We researched tirelessly and tried multiple different methods until we finally started seeing results through the use of protocols taught by legendary healers, Dr Arnold Ehret and Dr Robert Morse. Note: all information and resources are readily available for personal study and application, online. Dr Arnold Ehret's books can be downloaded freely if you search for "arnold ehret books pdf". Visit rawfigs.com for Dr Robert Morse videos which can be searched through by keywords via the search bar. Familiarise yourself with their teachings and protocols and move forward as you put this journal to use. Throughout our healing journeys, we found the process of recording our progress to be of great help. Our journals also helped us in note-taking of anything that we found useful, along with any tips and hacks that we came across. We felt inspired to create a personalised 30 day journal for your condition encouraging you to track your thoughts, feelings, progress and knowledge as you enjoy success and fulfillment on your journey of self healing. One of the key conclusions that we reached through our individual journeys was that whether you are a sufferer of Chorioretinitis (Uveitis), or any other condition, the same protocol that we used to heal will apply to you. However, dependant on the severity and time endured, you may need to follow the protocols for longer, using specific herbs (and glandulars) in order to achieve positive results, but you can make your own adjustments as you learn more. Equipped with the information found on this page, we trust that you will benefit greatly from this journal and reach your goals. Use it to keep yourself accountable, use it for noting down useful information that you discover, whilst recording the raw vegan foods (fruit, vegetables, herbs) that you eat and juice. Record daily routines such as time spent fasting, time spent eating, water consumed, sauna or lymph moving exercises performed, and anything else that you find to be supportive. You will never miss a moment now and remain focused on your goals. We wish you all the best. The Health Formation Team

Diagnosis & Treatment of Uveitis

This book is a comprehensive guide to the imaging techniques that have revolutionized the diagnosis and management of uveitis during the past decade, including optical coherence tomography (OCT), enhanced depth imaging, fundus autofluorescence, and wide-field angiography. In addition, the current role of the traditional (invasive) gold standard techniques, fluorescein angiography and indocyanine green angiography, is described. Among the newer imaging modalities, detailed attention is paid to the various OCT technologies such as spectral domain OCT, enhanced-depth imaging OCT, and enface swept-source OCT. Further individual chapters focus on imaging using adaptive optics, multiview OCT, and OCT angiography. Uveitis can affect virtually any structure in the eye, and imaging of these structures is critical in the diagnosis, prognosis, and management of the disease. Increasing use and better understanding of the different modalities described in this book are sure to improve our knowledge of disease mechanisms and likely outcomes.

Intraocular Inflammation

The increasing use of indocyanine green angiography in recent years makes this book a valuable resource. Provides a detailed introduction to ICG angiography, covering its unique vocabulary and methodology. Also describes normal choroidal filling phases as they occur in two healthy subjects.

Multimodal Imaging in Uveitis

Choroidal Disorders provides an overview on various chorioretinal disorders with a special emphasis on choroidal imaging. Choroidal Disorders

This is the second edition of a highly successful textbook that in many areas has become the preferred manual of vitreoretinal surgery. It provides a complete guide to all common vitreoretinal surgical procedures and also covers diagnosis and other aspects of management. The book is designed to allow a trainee or professional vitreoretinal surgeon to determine the best methodology in individual cases. In order to acquaint the reader with different opinions, "surgical pearls" have been contributed by other international experts in the field. These have proved popular in the past as an illustration of alternative methods, without detracting from the overall method described by the main author. Vitreoretinal Surgery will continue to prove particularly popular amongst trainees, but will also be of value to practicing professionals who need help in the management of difficult and rare cases. The text is backed up by the provision of videos of some aspects of the surgery.

Manual of Retinal Diseases

This book covers the entire range of vitreoretinal surgeries. The first section covers essential information about the anatomy and the appropriate diagnostic techniques which helps in preoperative evaluation. The second section is on surgical instrumentation, and includes adjuncts used in VR surgery. Advanced instrumentation such as 3D visualization system, endoscopic vitrectomy and robotic surgeries are well described in the chapters. The later sections deal with the surgical technique for different disease entities. Management of posterior segment complication of anterior segment surgeries such as cataract and keratoprosthesis are reviewed in detail. A section on gene therapy has been incorporated. This book will help the reader to gather a detailed round-up of basics of and advances made in the field of vitreoretinal surgery. It is supplemented with videos. This book is meant for practicing retinal surgeons, those in training as well as students with interest in vitreoretinal surgery.

Vitreoretinal Surgery

Ophthalmology for the Primary Care Physician

This book reviews the various emerging infectious diseases that show a significant association with uveitis, describing and explaining their ocular manifestations with the aid of color illustrations. In addition, it presents brief reports of further emerging infections that are associated with uveitis in rare cases. The coverage is wide ranging, encompassing diverse emerging bacterial, viral, parasitic and fungal infections. Individual chapters are also devoted to important re-emergent diseases such as syphilis and tuberculosis, with the focus on new data on epidemiology, diagnosis and management. Emerging infectious diseases are defined as "those whose incidence in humans has increased within the past two decades or threatens to increase in the near future". Emergence may be due to the spread of a new agent, to the recognition of an infection that has been present in the population but has gone undetected, or to the realization that an established disease has an infectious origin. This book will be an invaluable source of information on all aspects of uveitis in these diseases.
