Cardiac Catheterization in Congenital Heart Disease

The rapidly growing population of adults surviving with congenital heart lesions along with the success of interventional cardiology in the child and adolescent has spawned an incredible interest in adapting the technology for the adult congenital patients. Dr. Mullins, a pioneer in this area, has written an outstanding reference which covers all aspects of performing diagnostic and therapeutic cardiac catheterization procedures on patients of all ages. This illustrated book details the equipment and techniques for performing safe and successful procedures, with a strong emphasis on avoiding complications. It also includes the requirements of a catheterization laboratory for congenital heart

patients, as well as guidance for setting up and operating such a laboratory. Cardiac Catheterization in Congenital Heart Disease serves as an essential manual for pediatric and adult interventional cardiologists worldwide.

What's New in Cardiovascular Imaging is a bibliographical "image" of a Symposium held June 22-24, 1998 in Leiden, the Netherlands. At this Symposium all the major advances in cardiovascular imaging in all the cardiovascular imaging modalities (X-ray, (intravascular) ultra sound, magnetic resonance, scintigraphy and CT) were addressed by the leading authorities in this field. Based on the presentations of the invited Faculty, this book consists of a compilation of manuscripts related to most of the topics discussed at this particular meeting. We express our gratitude to all authors and coauthors for having made great efforts in preparing their superb up-to-date chapters under a great time pressure, so that this book was available at the time of the Symposium. The authors are all excellent investigators in one or more fields of cardiovascular imaging and they have stimulated progress in cardiovascular imaging with the aim to improve patient care and clinical research. This book consists of a total of 32 chapters subdivided into seven Parts. Each part describes a particular field in cardiovascular imaging. These Parts are: Coronary quantitation by QCA and intracoronary ultrasound (QCU), angiographic trials, progress in intravascular ultrasound, magnetic resonance (MR) coronary and vascular imaging, nuclear cardiovascular imaging, echocardiography, and cine and spiral CT coronary imaging. In general, each Part begins with a chapter that provides a broad overview of the advances in the field described in that particular Part, as well as a view towards the future.

The television series *SPACE: 1999* was in its first series shaped by the late sixties and early seventies counterculture movements, making *SPACE: 1999* into an example of how certain SF scholars see a natural alignment between science fiction and critical theory. However, due to changes in the political climate, *SPACE: 1999* went through an ideological reversal in its second series. As a result, the schizophrenic nature of the series has ever since caused debate. This book is written on an idealistic basis. It is sold at the lowest price the publisher was willing to accept. --Booklist "In the prologue of this book, Echo Heron, RN, states: Nurses are able to do what they do because they are rich in the gifts of healing, compassion and love. She then goes on to illustrate that statement with 18 chapters of amusing and moving true stories of her career in critical care and in the emergency room." --Chicago Tribune "Heron gives a voice to her fellow nurses (a savvy, wisecracking, take-no-guff voice) and turns them into real people." --Seattle Post-Intelligencer "Although Heron provides enough personal detail to make the book a very good read, its importance lies in her depiction of how sick people really function, what nurses do to help them, and how little physicians, hospitals and our society understand or value that work." --The Washington Post Book World

An echocardiogram uses sound waves to produce images of the heart. This common test allows a doctor to see the heart beating and pumping blood, and subsequently identify heart disease. This book is a complete guide to performing and interpreting an echocardiogram. 56 chapters describe both basic and advanced techniques for diagnosing different heart disorders. The second edition has been fully revised to provide clinicians with the latest developments and techniques in the field. Seven new chapters have been added to this edition covering echocardiography and artificial intelligence, hypertension, arrhythmogenic right ventricular dysplasia, Kawasaki disease, cardio-oncology, diabetes mellitus, and foetal echo. Dedicated chapters emphasise the role of echo in surgical procedures, and explore its use with electrophysiology – in patients with pacemakers and those undergoing cardiac resynchronisation therapy. The book is highly illustrated with many 2D and 3D echo images helping explain the descriptive text for each topic. The previous edition (9789352700929) published in 2017.

Space 1999 and Critical Theory

An impassioned insider's view of the Canadian soldier's war in Afghanistan and why it matters. A Line in the Sand takes up where the bestselling Fob Doc left off-this time, with a focus on the Canadian soldier in Afghanistan. What Captain Ray Wiss saw in Afghanistan during his first tour there in 2007-08 convinced him that this conflict was a rare example of a moral war. When the Canadian Forces asked him to return to the combat area, he agreed. Once again, he kept a diary. This time, he wrote something completely different. The conflict in Afghanistan continues to command the nation's attention. Written in an accessible and engaging style, A Line in the Sand's goal is to ensure that the efforts, sacrifices and achievements of those Canadians who served with such distinction are never forgotten. Illustrated with over 50 colour photographs, A Line in the Sand tells us about virtually every kind of soldier fighting in Afghanistan: the bomb technician, the woman who lugs heavy artillery shells, the engineer, the tank driver, the combat medic, the "grunt." We accompany Captain Ray Wiss as he treats the casualties of war-Canadian, Afghan (civilian and military) and Taliban. We follow combat patrols through dangerous terrain. We learn about the Afghans, from whom we are seemingly so different yet with whom we share so much. All profits from A Line in the Sand will be donated to the Military Families Fund, created by former chief of the defence staff General Rick Hillier to assist military families.

Emergency Echocardiography

This book is a comprehensive and richly-illustrated guide to cardiac CT, its current state, applications, and future directions. While the first edition of this text focused on what was then a novel instrument looking for application, this edition comes at a time where a wealth of guideline-driven, robust, and beneficial clinical applications have evolved that are enabled by an enormous and ever growing field of technology. Accordingly, the focus of the text has shifted from a technology-centric to a more patient-centric appraisal. While the specifications and capabilities of the CT system itself remain front and center as the basis for diagnostic success, much of the benefit derived from cardiac CT today comes from avant-garde technologies enabling enhanced visualization, quantitative imaging, and functional assessment, along with exciting deep learning, and artificial intelligence applications. Cardiac CT is no longer a mere tool for non-invasive coronary artery stenosis detection in the chest pain diagnostic algorithms; cardiac CT has proven its value for uses as diverse as personalized cardiovascular risk stratification, prediction, and management, diagnosing lesion-specific ischemia, guiding minimally invasive structural heart disease therapy, and planning cardiovascular surgery, among many others. This second edition is an authoritative guide and reference for both novices and experts in the medical imaging sciences who have an interest in cardiac CT.

Anesthesia for Congenital Heart Disease will provide a state of the art summary of the many changes occurring in this rapidly evolving field over the last decade. The unique value of this book is that all chapters are written by leaders in the field of congenital cardiac anesthesia, who perform large numbers of cases clinically, and contribute important knowledge to the research literature, both clinical and basic science. A wide range of contributors from all of the major congenital heart surgery programs in North America give a broad range of perspectives not seen in previous texts in this field. This text will be the leading book in this subspecialty - the most comprehensive, detailed and specific, from the perspective of multiple institutions. Emphasis on new and emerging developments in anesthetic drugs and techniques occurs in each chapter. New chapters on subjects that have never before been addressed in a textbook of pediatric cardiac anesthesia include cardiac catheterization laboratory anesthesia, computers and technology, neurologic monitoring, bleeding and coagulation, approach to the teenager and adult, approach to the premature newborn, the inflammatory response, regional anesthesia and pain management, airway and ventilatory management, dysrhythmia management, non-cardiac surgery and cardiac magnetic resonance imaging; and research, teaching and administration.
