The Oilman's Barrel

Story of the oil industry's unit of measure ... full of legends and lore of the oil business.

The Oilman's Barrel

This book is of more than ordinary significance, for it tends to consolidate, in interesting and easily understandable terms, the history and definitions, not only of the now-standard oil barrel but also of the units that make it up and the legal pitfalls connected with it. It is a story full of oil-drilling lore--about odd-sized barrels in wagons for transporting the newly discovered petroleum in Pennsylvania in 1859; about Benedict Hagan, who supplied many an empty whiskey barrel to the producers at Oil Run; about Nelly Bly, who is more redoubtable to the oil industry for having been the "mother of steel barrels" than for besting Phileas Fogg's time in circling the globe; about the scientific struggle for accuracy in gauging oil.

Peregrine Bunce

The author develops an economic framework for analyzing state regulation of oil and gas and concludes that existing regulations fall short of assuring optimum well spacing, production rates, use of associated gas, and exploration. Originally published in 1971.

Witty, bawdy, and vicious, Yusuf al-Shirbini's *Brains Confounded* pits the "coarse" rural masses against the "refined" urban population. In Volume One, al-Shirbini describes the three rural "types"—peasant cultivator, village man-of-religion, and rural dervish—offering anecdotes testifying to the ignorance,

dirty, and criminality of each. In Volume Two, he presents a hilarious parody of the verse-and-commentary genre so beloved by scholars of his day, with a 47-line poem supposedly written by a peasant named Abu Shaduf, who charts the rise and fall of his fortunes. Wielding the scholarly tools of elite literature, al-Shirbini responds to the poem with derision and ridicule, dotting his satire with digressions into love, food, and flatulence. Volume Two of *Brains Confounded* is followed by *Risible Rhymes*, a concise text that includes a comic disquisition on "rural" verse, mocking the pretensions of uneducated poets from Egypt's countryside. *Risible Rhymes* also examines various kinds of puzzle poems, which were another popular genre of the day, and presents a debate between scholars over a line of verse by the tenth-century poet al-Mutanabbi. Together, *Brains Confounded* and *Risible Rhymes* offer intriguing insight into the intellectual concerns of Ottoman Egypt, showcasing the intense preoccupation with wordplay, grammar, and stylistics and shedding light on the literature of the era.

The Gasoline and Fuel Oil Shortage

Born in the Great Depression, Dan R. Frantzen worked his way through poverty, adversity and hardship to the pinnacle of his career. Through the help of his young daughter, inspiration discovered Dan and he began his journey writing to help others for the next 40 years. His definition of 'Success Through God' has helped him and many others overcome their problems by Dan's efforts of advice and encouragement. Dan's belief that we are all in service to God makes the point that the lord is with us through every trial and tribulation. Mr. Frantzen learned the secret of turning problems into answers. With God, a positive attitude and some luck, he turned his life of adversities into benefits that lasted him a lifetime. Dan's entire career in the oil and gas industry was met with the ups and downs of the industry. The lessons learned on this path led him to his greatest career discoveries and helped him meet many 'Divine Connections' that have stayed with him the duration of this life. Since 1977, Dan has been corresponding and fighting for our America's economic stability. Predicting our current energy crisis, he has been writing letters to Presidents and Congressmen in an effort to save America and its oil and gas industry. Learn how Dan's economic plans could bring us back to world economic supremacy, regain the respect of the world and help us chose a proper leader for America. Life is not complete without family; and Dan lovingly describes his moments with his children. Mirroring himself, his children set out on the road of life at an early age with a pioneering spirit that Dan could only liken to his own. Finally, an amateur philosopher, read miscellaneous articles that encompass Dan's many thoughts and feelings in regard to this life.

Gasoline, Diessel, and Heating Oil Shortages, Hearings Before the Subcommittee on Energy, 93-1

Interest in the use of biomass for non-food applications has grown strongly in recent years, mainly as a consequence of its potential as a prime renewable energy resource. Renewable energies rank highly among the options that will contribute to the prevention of climate change and to security of energy supply in the future. Furthermore, exploiting biomass is very attractive as a way of dealing with two sensitive issues facing the majority of western European countries today; the extent of unemployment and the setting aside of farm lands to limit excess agricultural production. The 8th European Conference for Energy, Environment, Agriculture and Industry, held in Vienna, October 1994 was larger than any of its predecessors, with over 300 refereed contributions from 20 countries worldwide and over 520

participants. It was arguably the most significant event to date in this field, providing the opportunity for an international exchange of information on the recent progress in developing and implementing renewable biomass based non-food technologies. Published in 3 volumes, the proceedings of this conference therefore contain the most complete overview of the present state-of-the-art. Subjects covered include: biomass resource base, electricity and heat generation, transportation fuels, chemicals from biomass, products from bio- and thermochemical conversion technologies, economics, environmental aspects and opportunities for implementation worldwide, in particular in developing countries. Apart from the numerous contributions on the most recent results in research, development and implementation, the publication also contains authoritative reviews on most of the above-mentioned areas from leading experts in each field. In addition to this, it contains a list of key issues for developing a successful strategy leading to a rapid implementation in Europe and abroad. As a result it is indispensable for anyone working in this area, whether in research, demonstration or in policy development.
