No More Mr. Nice Engine. One day, Diesel is shunting trucks full of dairy products for Hiro in the yard. To keep them from acting up, he is biffing them as hard as he can, spilling the milk churns. Edward tells Diesel to be gentle, but Diesel retorts that Edward should mind his own business. Soon, Hiro arrives and collects his train. Hiro, unlike Diesel, is nice to the trucks as a means of getting them to behave. He delivers his trucks to Knapford Station, but when the truck door is opened, the milk churns tip over and spill onto Sir Topham Hatt's trousers, much to his dismay.

Engine of Many Colours.James needs to be repaired after crashing into the back of Tidmouth Sheds, he's worried if Sir Topham Hatt would go by his words he said before and paint him blue, if he acts up again, and hears that there might not be enough red paint. That night, he has a succession of dreams about being repainted different colours. Each colour seems fine once he gets used to it and even makes him more splendid. But each time that James starts to show off, he dreams that he has another crash.

Runaway Truck.A truck runs out of control down the line, and Yong Bao and Thomas must stop it. Seeing is Believing.Merlin comes to Sodor from the Mainland for the first time. He thinks that when he shuts his eyes, nobody can see him. Percy hears everyone talking about the 'invisible' engine and wonders why he has not seen him.

Forever and Ever.Gordon is upset that Edward no longer lives at Tidmouth Sheds, and becomes rude to Nia for moving in. When he learns that Henry is moving out of Tidmouth Sheds to stay at Vicarstown,

Gordon throws a paranoid tantrum and decides to do things differently because Sir Topham Hatt is changing things.

Thomas In the Wild. Thomas is taking a film crew to a nature reserve in China to make a film about giant pandas. Vehicle Operator's Manual

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding

valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

The New York Clipper (December 1919)

Illustrating the fascinating interplay between physics and mathematics, *Groups, Representations and Physics*, Second Edition provides a solid foundation in the theory of groups, particularly group representations. For this new, fully revised edition, the author has enhanced the book's usefulness and widened its appeal by adding a chapter on the Cartan-Dynkin treatment of Lie algebras. This treatment, a generalization of the method of raising and lowering operators used for the rotation group, leads to a systematic classification of Lie algebras and enables one to enumerate and construct their irreducible representations. Taking an approach that allows physics students to recognize the power and elegance of the abstract, axiomatic method, the book focuses on chapters that develop the formalism, followed by chapters that deal with the physical applications. It also illustrates formal mathematical definitions and proofs with numerous concrete examples.

This book provides an analysis of the country's political economy in transition. It documents the history of the gold mining industry's involvement in shaping the political landscape of South Africa, and shows the degree to which the political transition was induced to put in place a new mode of regulation for capital accumulation. In the process, the victims of apartheid have now become victims of democracy's neo-liberalism as the government is constrained from being developmental, interventionist and redistributive.

This report was prepared to accompany President Clinton's first address to a Joint Session of Congress. It describes in detail the comprehensive economic plan being proposed by the new administration for the nation. The plan has three key elements: economic stimulus to create jobs now while laying the foundation for long-term economic growth; long term public investments to increase the productivity of people and businesses; and a balanced deficit-reduction plan to prevent the drain of private investments that generate jobs and increase incomes. The text is organized into four sections: (1) "A New Direction" (a brief 3-page preamble); (2) "A Legacy of Failure" (a 16-page statement of the problem, under subheadings such as "Skyrocketing Health Care Costs"); (3) "What We Must Now Do" (a 92-page statement of the solution, under subheadings such as "Investing in the Future: Reducing the Deficit To Increase Private Investment" and "Restoring Fairness"); and (4) "The Task Remaining" (a brief 6-page wrap-up). A closing Appendix contains 25 pages of statistical tables outlining various discretionary program savings, proposed changes to mandatory programs, stimulus proposals, investment proposals, and revenue and receipts proposals. Most tables provide figures for each year for the 6-year period 1993-1998. The field of education is touched upon in the report at six locations: (1) "Relative Earnings by Education for 25-34 Year Olds" (Chart 2-9, p. 18); (2) Chapter 1 Compensatory Education (p.31); (3) Pell Grants (p. 32); (4) "Lifelong Learning," covering full funding of Head Start and related child care funding and Medicaid, National Service, Dislocated Workers Program, Job Corps Expansion, Summer Youth Employment and Training Program, Youth Apprenticeship, and various Department of Education reforms and initiatives (p. 57-59); (5) Impact Aid "b" Projects (p. 87); and (6) Reform of Student Loan Programs (p. 92).
