## Neonatal Encephalopathy and Cerebral Palsy

This monograph explores the mechanisms and timing of possible etiologic events that contribute to fetal and neonatal neurologic injury. The report presents evidence that most cases of cerebral palsy are a result of multifactorial and unpreventable causes that occur during fetal development or in the newborn after delivery, and not a result of an isolated intrapartum hypoxic event. The report contains a set of criteria that may be used to define (or rule out) an acute intrapartum hypoxic event sufficient to cause or suggest cerebral palsy.

## Neonatal Encephalopathy and Neurologic Outcome

Significantly revised and updated, the new second edition updates the science on neonatal encephalopathy presented in the 1st edition. The new 2nd edition recommends a broad evaluation of all potential contributing factors in every case of neonatal encephalopathy, including maternal medical history, obstetric and intrapartum factors, and placental pathology. This recommendation is a shift from the 2003 report, which focused on determining whether or not a hypoxic-ischemic event was the cause of neonatal encephalopathy. Includes new sections on - Placental pathology - Focal ischemic stroke - Neonatal interventions - Patient safety - Significant advances in neuroimaging This report will assist the clinician in evaluating a newborn with encephalopathy to assist in defining both the cause and timing.

## Fetal Therapy

This book examines the role of Neonatal Intensive Care Units (NICUs) and follow-up clinics in addressing the complex developmental, behavioral, social, and medical needs of at-risk infants through early intervention and medical subspecialties. It describes the necessary functional components of follow-up clinics and challenges in establishing and running multidisciplinary clinics in an area of difficult health care financing. Chapters provide essential guidelines for determining which neonates will need follow-up care, evaluating for neurodevelopmental delays and medical and behavioral impairment and disability, and estimating how long intervention and further follow-up will be required. Chapters also discuss organization, staffing, funding, testing protocols, and coordination with other programs and care facilities, particularly early intervention and the medical home. In addition, the book offers best practices for fostering optimal development for individual infants and high-risk populations while raising standards for neonatal care and creating a smooth transition to appropriate subsequent care. Topics featured in this book include: Developmental care in the nursery. Utilizing neonatal brain imaging to predict neurodevelopmental outcomes of NICU infants. Genetic considerations in infants with congenital anomalies. The HRIF clinic organization model. Issues common in neurodevelopmental testing of premature infants. The impact of environmental risks, such as parental distress and in-utero drug exposure, to infant neurodevelopment. Follow-Up for NICU Graduates is a must-have resource for researchers, practitioners, and graduate students in developmental psychology, pediatrics, neuroscience, obstetrics, nursing, and related disciplines.

The first section of the book provides a comprehensive and up-to-date overview of development of the brain, including topics such as neuronal stem cells, epigenetics, and the influence of the prenatal environment. The next three sections analyze the epidemiology, diagnosis, interventions, and controversies and research directions associated with each of the three neurodevelopmental disorders. It also examines co-morbidities common to all three disorders, such as disturbed sleep, seizures, behavioral disorders, and pain. It concludes by highlighting the impact of ASD, FASD, and CP on family dynamics and provides tools and resources based on foundational concepts such as neuroethics, bioinformatics, community engagement, and advocacy. Learning objectives, key points, clinical vignettes, and multiple choice questions are incorporated throughout the book. With its comprehensive treatment of disease mechanisms, genetics, and pathophysiology associated with these disorders and its discussion of potential therapies and novel treatments, Neurodevelopmental Pediatrics: Genetic and Environmental Influences is an essential resource for developmental pediatricians, child neurologists, fellows, residents and graduate students.
