Cosmology Lecture 3 - Cosmology Lecture 3 by Stanford 126,223 views 11 years ago 1 hour, 41 minutes - (January 28, 2013) Leonard Susskind presents **three**, possible geometries of homogeneous space: flat, spherical, and hyperbolic, ...

They Grow for a While and Then They Shrink and in Fact We Know How Big each One of these Spheres Is if the Spheres Are Characterized by an Angle Let's Call that Angle R Is the Distance from this Point as Measured Let's Say in Angle so $R = 0$ over Here $R = \pi$ over Here That's Just a Way To Label the Sphere That's Just over a Set of Coordinates To Describe the Sphere Right Where We Are that's $R = 0$ the Farthest We Can See until the Sphere Closes Up on Itself at the Back End We'll Call that $R = \pi$

If You Want To Go another Step to Three-Dimensional Spheres You Think of Them as a Nested Series of Concentric Two Spheres around You Okay Now You Should Be Able To Guess What the Metric of a Three Sphere Is this Is the Metric of a Three Sphere It's the $\Omega^2 = dr^2 + r^2 d\Omega^2$ Again Is It dr^2 Squared There's Always a dr^2 Squared that's Distance Away from You and Then Is the Angular Part and the Angular Part Now Will Not Involve Circles but the Angular Part Will Involve Two Spheres a Series of Two Spheres around You and that Will Be $\sin^2 R$ the Ω^2 Squared Not the Ω Squared

And Even More Might Actually Just Be Living on the One Dimensional Space with no Sense of a Perpendicular Direction but Still Nevertheless We Can if We Like Describe a Circle by Embedding It in Two Dimensions It's Only One Dimensional but We Can Embed It in Two Dimensions and How Do We Do that We Write that the Circle Is $x^2 + y^2 = 1$ That's the Circle Right Common Distance every Point Same Distance from the Origin Namely in this Case a Distance Worn that's the Unit Circle the Unit 2 Sphere We Introduce a Third Direction Notice that the Describer 2 Sphere in this Way We Have to We Have no Choice but To Introduce a Fake Third Dimension In this Case a Distance Worn that's the Unit Circle the Unit 2 Sphere We Introduce a Third Direction Notice that the Describer 2 Sphere in this Way We Have to We Have no Choice but To Introduce a Fake Third Dimension Now the Third Dimension in the Case of the Surface of the Earth Is Real You Can Move in the Perpendicular Direction but Again if You Thought about a World Flatland if You Thought a Flatland Where Creatures Can Only Receive Light from within the Surface Itself Then the Extra Dimension Would Just Be a Trick for Describing the Circle Sorry Describing the Sphere We Would Describe It as $x^2 + y^2 + z^2 = 1$

You Can Go another Step You Can Say Let Me Construct a Three Sphere To Construct the Three Sphere in this Way You Have To Embed It in a Four Dimensional Space Again Now the Four Dimensional Space May Really Be a Fake Maybe Only the the the Three Dimensional Surface Makes any Sense but You Would Add One More Letter and this Surface this Three-Dimensional Surface in a Four Dimensional Space Is the 3-Sphere Again if You Coordinate Eyes It by Distance from some Point this Is the Metric of the Three Sphere Okay Embedding It in a Higher Dimensional Space May or Might May Not Make Real Sense or in Other Words Really Have Physical Significance as I Said the Surface of the Earth Is Embedded in Three-Dimensional Space if We Live on a Three Sphere Chances Are It Is Not Embedded in the Same Way in a Four Dimensional Space

Incidentally this Fact Is True in Three Dimensions It's True in any Number of Dimensions but Now Let's Do It on the Sphere and for Simplicity Let's Just Imagine the 2-Sphere so Here We Are We're over Here and We're Looking Out at the Galaxies Which Are All about the Same Size They Fill the Space Pretty Much Homogeneous Lee We Can Tell How Far They Are from Us in the Same Way That We Told before We Can Measure Their Angle Let's See What Let's See What We Get Again the Size of the Galaxy Is D^2
