Pacific Record of Medicine and Pharmacy

The field of nutrition has significant interaction and overlaps with the practice of pharmacy. Patients often address the pharmacist first for nutritional advice or information on dietary supplements. To meet the patients' needs, pharmacists must be knowledgeable about nutrition, weight control, diet and disease, potential food and drug interactions, and herbal medicines used as nutritional supplements. This work aims to provide pharmacists with the information they need to make sound decisions in their practice and to give patients accurate advice in nutrition counselling. Topics include ergogenic aids, herbal medicines, and pediatric nutrition.

Prescription Pharmacy

"Index medicus" in v. 1-30, 1895-1924.

American Journal of Hospital Pharmacy

The development of new technology means that compromised patients previously confined to hospital may now be treated at home. Those patients receiving intravenous feeding, cytotoxic drugs and new insulin therapy, are fully trained by the health-care professionals (doctors, pharmacists and nurses) to encourage self-reliance and understanding which are vital to success. There are hazards in treating these patients in the home environment, e.g. microbiological risks which are currently being evaluated, failure of equipment, and social problems as patients adjust to a new life in the community. Nevertheless, the balance of benefits favour restoration of the patient to a self-reliant positive life at home. The delivery of this important new dimension in therapy was described at a symposium held in the University of York by innovators in the field. Discussion enabled the core of knowledge and experience developed by multi-disciplinary teams to be shared. The problems of supplying parenteral nutrition and medication for the compromised patient in the home and the family situation were aired and solutions presented. The special care for hospital out-patients receiving cytotoxic drug therapy and safe procedures for staff handling these agents was presented and together with responses to questions indicated the direction for UK hospital pharmacists to follow. More information is needed and it is hoped that this account of these proceedings will stimulate interest in these aspects of health care.

Medical Review of Reviews

Every four minutes, over 50 children under the age of five die. In the same four minutes, 2 mothers lose their lives in childbirth. Every year, malaria kills nearly 1.2 million people, despite the fact that it can be prevented with a mosquito net and treated for less than \$1.50. Sadly, this list goes on and on. Millions are dying from diseases that we can easily and inexpensively prevent, diagnose, and treat. Why? Because even though we know exactly what people need, we just can't get it to them. They are dying not because we can't solve a medical problem but because we can't solve a logistics problem. In this profoundly important book, Eric G. Bing and Marc J. Epstein lay out a solution: a new kind of bottom-up health care that is delivered at the source. We need microclinics, micropharmacies, and microentrepreneurs located in the remote, hard-to-reach communities they serve. By building a new model that "scales down" to train and incentivize all kinds of health-care providers in their own villages and towns, we can create an army of on-site professionals who can prevent tragedy at a fraction of the cost of top-down bureaucratic programs. Bing and Epstein have seen the model work, and they provide example after example of the extraordinary results it has achieved in Africa, Asia, and Latin America. This is a book about taking health care the last mile—sometimes literally—to prevent widespread, unnecessary, and easily avoided death and suffering. Pharmacy on a Bicycle shows how the same forces of innovation and entrepreneurship that work in first-world business cultures can be unleashed to save the lives of millions.

Social and Administrative Aspects of Pharmacy in Low- and Middle-Income Countries

Social and Administrative Aspects of Pharmacy in Low- and Middle-Income Countries: Present Challenges and Future Solutions examines the particularities of low- and middle-income countries and offers solutions based on their needs, culture and available resources. Drawing from the firsthand experience of researchers and practitioners working in these countries, this book addresses the socio-behavioral aspects of pharmacy and health, pharmacoeconomics, pharmaceutical policy, supply management and marketing, pharmacoepidemiology and public health pharmacy specific to low- and middle-income countries. While some practices may be applied appropriately in disparate places, too often pharmacy practice in low- and middle-income countries is directly copied from successes in developed countries, despite the unique needs and challenges low- and middle-income countries face. Examines key issues and challenges of pharmacy practice and the pharmaceutical sector specific to low- and middle-income countries Compares pharmacy practice in developed and developing countries to highlight the unique challenges and opportunities of each Provides a blueprint for the future of pharmacy in low- and middle-income countries, including patient-centered care, evidence-based care and promoting the role of the pharmacist for primary health care in these settings

Oxford Handbook of Clinical Pharmacy

This handbook is the definitive quick reference guide to clinical pharmacy, providing practising and student pharmacists with a wealth of practical information.

Fundamental Skills for Patient Care in Pharmacy Practice

Fundamental Skills for Patient Care in Pharmacy Practice enables students and new pharmacists to master the skills associated with clinical care in either the inpatient or outpatient setting. In accessible steps, this valuable resource provides the tools for gaining medication histories from patients and counseling them on the most effective and safe manner to take medications. Each chapter explores the background and practice of a critical skill, tools that aid in its development and mastery, and tips for success. Students and pharmacists will come away with the knowledge to identify drug-related problems and formulate plans for solutions to these problems. Fundamental Skills for Patient Care in Pharmacy Practice prepares future pharmacists to communicate effectively in verbal and written formats with health professionals and special patient populations as they prepare and present SOAP notes, patient cases, and discharge counseling.

Clinical Pharmacy and Patient Education

This 1984 book, part of the series Progress in Clinical Pharmacy, provides an authoritative account of developments in clinical pharmacy in Europe. It is prefaced by chapters on the American experience in clinical pharmacy education and on patient education. The book reports the proceedings of the twelfth European symposium on clinical pharmacy, held in Barcelona in October 1983. Two of the great challenges facing pharmacy were how better to educate pharmacists to fulfil a clinical or extended role in healthcare and how to meet an important part of such a role, that is the better education of patients in the use of medicines. These two complementary topics were the twin themes of this symposium. As well as papers on these themes, other articles on clinical pharmacy were presented and are published in these proceedings. The book will continue to interest any pharmacist contemplating the development of clinical pharmacy.

Hospital pharmacy and the patient

The development of new technology means that compromised patients previously confined to hospital may now be treated at home. Those patients receiving intravenous feeding, cytotoxic drugs and new insulin therapy, are fully trained by the health-care professionals (doctors, pharmacists and nurses) to encourage self-reliance and understanding which are vital to success. There are hazards in treating these patients in the home environment, e.g. microbiological risks which are currently being evaluated, failure of equipment, and social problems as patients adjust to a new life in the community. Nevertheless, the balance of benefits favour restoration of the patient to a self-reliant positive life at home. The delivery of this important new dimension in therapy was described at a symposium held in the University of York by innovators in the field. Discussion enabled the core of knowledge and experience developed by multi-disciplinary teams to be shared. The problems of supplying parenteral nutrition and medication for the compromised patient in the home and the family situation were aired and solutions presented. The special care for hospital out-patients receiving cytotoxic drug therapy and safe procedures for staff handling these agents was presented and together with responses to questions indicated the direction for UK hospital pharmacists to follow. More information is needed and it is hoped that this account of these proceedings will stimulate interest in these aspects of health care.

Hospital Pharmacy

A STEP-BY-STEP GUIDE TO IMPLEMENTING ADVANCED PHARMACY SERVICES IN COMMUNITY AND CLINIC SETTINGS Community and Clinical Pharmacy Services teaches pharmacy students and practicing pharmacists how to provide advanced levels of pharmacy services in community and clinic settings designed to help patients achieve specific health goals and treat common disease states. This unique text provides practical--rather than merely ideological--ways for pharmacists to utilize their extensive clinical knowledge and fill a major gap in American health care. It discusses barriers, nec-

essary skills, required knowledge, and issues related to preparation, interventions, patient outcomes, economic aspects, and marketing considerations for therapeutic areas commonly addressed in the outpatient setting. The beginning of the book delves into the general management skills necessary to provide and implement advanced patient care services, including documentation, patient interviewing, and medication therapy management. Important chapters discuss disease states that would most likely be amenable to development of pharmacy services, including: Asthma Smoking Cessation Diabetes Hypertension Osteoporosis Obesity Also covered are immunizations, anticoagulation, and cardiometabolic services. The disease state chapters include learning aids such as summary points, first-hand accounts from experienced pharmacists who have implemented pharmacy services for that particular condition, a simulated patient case, and multiple-choice questions.

Community and Clinical Pharmacy Services: A step by step approach.

Clinical pharmacy: a practical approach.

Clinical Pharmacy Practice

Pharmacy Practice in Developing Countries: Achievements and Challenges offers a detailed review of the history and development of pharmacy practice in developing countries across Africa, Asia, and South America. Pharmacy practice varies substantially from country to country due to variations in needs and expectations, culture, challenges, policy, regulations, available resources, and other factors. This book focuses on each country's strengths and achievements, as well as areas of weakness, barriers to improvement and challenges. It sets out to establish a baseline for best practices, taking all of these factors into account and offering solutions and opportunities for the future. This book is a valuable resource for academics, researchers, practicing pharmacists, policy makers, and students involved in pharmacy practice worldwide as it provides lessons learned on a global scale and seeks to advance the pharmacy profession. Uses the latest research and statistics to document the history and development of pharmacy practice in developing countries Describes current practice across various pharmacy sectors to supply a valuable comparative analysis across countries in Africa, Asia, Europe, and South America Highlights areas of achievement, strengths, uniqueness, and future opportunities to provide a basis for learning and improvement Establishes a baseline for best practices and solutions
