Baby Dinosaurs

It's not easy being a big sister - especially when your new baby brother is a roaring dino baby. There are just SO many things to remember . . . Be quiet in the morning, when you first get up. Because crashes, bangs and thuds will wake our dino pup. Shhhhhhhh! Don't play rough and tumble with a little thing like this. Instead be soft and gentle. We all LOVE a dino kiss. Mwaah! But, before long, this big sister grows to love teaching her brother all the grown-up things she knows and, very quickly, life in the dino family is as fun (and chaotic!) as ever.

Dinosaur Babies

A scientific look at creationism from a former creationist According to a recent Gallup Poll, almost 40 percent of Americans believe that sometime in the last 10,000 years Earth and humankind were created in their present form--the rationale being that this is (presumably) the story told in the book of Genesis. Within that group, any threatening scientific evidence that suggests otherwise is rejected or, when possible, retrofitted into a creationist worldview. But can this uncomfortable blend of biblical literalism and pseudoscience hold up under scrutiny? Is it tenable to believe that the Grand Canyon was formed not millions of years ago by gradual erosion but merely thousands of years ago by the Great Flood? Were there really baby dinosaurs with Noah on his ark? Janet Kellogg Ray, a science educator who grew up a creationist, doesn't want other Christians to have to do the exhausting mental gymnastics she did earlier in her life. Working through the findings of a range of fields including geology, paleontology, and biology, she shows how a literal interpretation of the book of Genesis simply doesn't mesh with what we know to be reality. But as someone who remains a committed Christian, Ray also shows how an acceptance of the theory of evolution is not necessarily an acceptance of atheism, and how God can still be responsible for having created the world, even if it wasn't in a single, momentary, miraculous event.
