The new edition of the best-selling Lecture Notes title is a concise introduction to clinical biochemistry that presents the fundamental science underpinning common biochemical investigations used in clinical practice. Lecture Notes: Clinical Biochemistry allows the reader to make efficient and informed use of the diagnostic services offered by their clinical biochemistry department. The result is a text that serves as a reference to the practitioner as well as the student. The book takes a system-based approach, with the underlying physiological rationale for any test explained in the context of disruption by disease. This leads naturally to an integrated and practical understanding of biochemical diagnostics. Including multiple choice questions (MCQs) alongside end-of-chapter case studies to help develop test-selection skills, Lecture Notes: Clinical Biochemistry provides the essential background to biochemical investigations and is an ideal course companion and revision guide for medical students, junior doctors on the Foundation Programme, general practitioners, and nurses and laboratory technicians.

Lecture Notes: Tropical Medicine is a comprehensive introduction to tropical medicine. The new edition is in full colour throughout with over 40 colour images integrated with the text. There is a new chapter on syndromes of undernutrition (in both children and adults), and the section on non-communicable diseases has been extended to include mental health problems in the tropics. The core information is presented in a clear and concise way, with extensive use of diagrams, algorithms, tables and boxes. All chapters have been updated to reflect current best practice and the annotated bibliographies and lists of web-based resources have been extended. The chapters on HIV, tuberculosis and malaria have undergone particularly extensive revision, reflecting rapid changes in these areas since the last edition. Lecture Notes: Tropical Medicine is particularly aimed at postgraduate doctors attending tropical medicine courses, as well as medical students taking a tropical medicine elective period. It will also be useful to a wide range of other health professionals involved with medicine in the tropics, or imported tropical disease.

The single best answer format of questions is invaluable in assessing a trainee's clinical skills and problem-solving abilities. It allows the trainee to demonstrate application of their knowledge to clinical practice. This book comprises six sets of practice papers. Each set contains 30 single best answer questions which cover topics including clinical anaesthesia, pain and intensive care. The questions are based on the recent changes introduced to the written part of the final FRCA examination. The best possible answer to a given clinical scenario is substantiated by a detailed explanation drawn from recent review articles and textbooks in clinical anaesthesia. These questions will enable candidates to assess their clinical knowledge and skills in problem-solving, data interpretation and decision making. This book is essential study material for candidates sitting postgraduate examinations in anaesthesia and intensive care medicine. It is not only an essential guide for trainees but also an invaluable educational resource for all anaesthetists.

Wills' Biochemical Basis of Medicine, Second Edition provides a basic understanding of the structure and metabolic processes in the context in which they occur in the cell or in the tissues. This book provides groundwork of academic biochemistry and demonstrations of the application of biochemistry to medicine. Organized into five parts encompassing 43 chapters, this edition begins with an overview of the biochemistry of the subcellular organelles. This text then examines the functions of the nucleus, mitochondria, and the endoplasmic reticulum. Other chapters consider the biochemistry of the hormones and the regulation of the metabolic fuels. This book discusses as well the biochemistry of environmental hazards and examines the treatment of viral carcinogenesis. The final chapter deals with the results of the application of recombinant DNA technology to the diagnosis of genetic disorder. This book is a valuable resource for biochemists, biologists, physicians, clinical researchers, and medical students.

Delays in recognising deterioration or inappropriate management of people in acute care settings can result in late treatment, avoidable admissions to intensive care units and in some instances unnecessary deaths. As the role of the nurse in healthcare settings continues to change and evolve, today's student nurses need to be equipped with the fundamental skills to recognise and manage deterioration in the patient in a competent and confident manner, as you learn to become practitioners of the future. Using a body systems approach and emphasising the central role and function of the nurse throughout, this book provides a comprehensive overview of the essential issues in this important subject. Topics covered include: recognition and identification of physiological deterioration in adults; identification of disordered physiology that may lead to a medical emergency linked to deterioration of normal function; relevant anatomy and physiology; pathophysiological changes and actions that need to be taken; immediate recognition and response; investigations, diagnosis and management issues; and teaching and preventative strategies.
