Disasters raise serious challenges for contemporary legal orders: they demand significant management, but usually amidst massive disruption to the normal functioning of state authority and society. When dealing with disasters, law has traditionally focused on contingency planning and recovery. More recently, however, 'resilience' has emerged as a key concept in effective disaster management policies and strategies, aiming at minimising the impact of events, so that the normal functioning of society and the state can be preserved. This book analyses the contribution of law to resilience building by looking at law's role in the different phases of the disaster regulatory process: risk assessment, risk management, emergency intervention, and recovery. More specifically, it addresses how law can effectively contribute to resilience-oriented disaster management policies, and what legal instruments can support effective resilience-building.

The Supplemental Reader

Message for Parents: The first objective of this book is to provide reading material for parents that is suitable for their child's level of development. Five or six stories or poems should be sufficient. Patient parental guidance is necessary. Especially, review the punctuation definitions. The second objective is to provide a place in the book for the students to write words they learn to spell. Parents can help by looking through the stories and lessons for suitable easy-to-spell words. Every story will have three or four words for easy spelling. Later, the third objective is to choose a clever poem or short story that your child will enjoy reading. If this finally requires the funny papers or a comic book, that is your decision. Nevertheless, when parents make reading a meaningful "for fun" activity at home, their children have the greatest opportunity to become excellent readers. However, if you notice hearing or vision problems, or problems of dyslexia (spatial impairment) tell your child's homeroom teacher. SPM

Copyright law is a critical issue for authors, librarians, publishers, and information vendors. It is also a complex area, with many shades of gray. Librarians continually need to seek answers to questions ranging from the reproduction of copyrighted works for library users, through the performance of audiovisual works, to the digitization and display of protected works on library websites. This book presents updated versions of the author's copyright columns published in *Against the Grain*, the leading journal in acquisitions librarianship since the late 1990s. It is the first volume in the series *Charleston Insights in Library, Archival, and Information Sciences*. The aim of the *Charleston Insights* series is to focus on important topics in library and information science, presenting the issues in a relatively jargon-free way that is accessible to all types of information professionals, including librarians, publishers, and vendors, and this goal shapes the pragmatic and accessible tone of the book. The volume is presented in question-and-answer format. The questions are real, submitted by librarians, educators, and other information professionals who have attended the author's copyright law workshops and presentations or submitted them to her by e-mail or telephone. The author has selected the questions and answers that have general applicability. She has then arranged them into logical chapters, each prefaced by a short introduction to the topic. Because it is written in an accessible and clear style, readers may want to review the entire work or they can just access particular chapters or even specific questions as they need them. The volume includes an index to facilitate reference use.

Handbook of Hydraulic Resistance

The handbook has been composed on the basis of processing, systematization and classification of the results of a great number of investigations published at different time. The essential part of the book is the outcome of investigations carried out by the author. The present edition of this handbook should assist in increasing the quality and efficiency of the design and usage of industrial power engineering and other constructions and also of the devices and apparatus through which liquids and gases move.

Model Free Adaptive Control: Theory and Applications summarizes theory and applications of model-free adaptive control (MFAC). MFAC is a novel adaptive control method for the unknown discrete-time nonlinear systems with time-varying parameters and time-varying structure, and the design and analysis of MFAC merely depend on the measured input and output data of the controlled plant, which makes it more applicable for many practical plants. This book covers new concepts, including pseudo partial derivative, pseudo gradient, pseudo Jacobian matrix, and generalized Lipschitz conditions, etc.; dynamic linearization approaches for nonlinear systems, such as compact-form dynamic linearization, partial-form dynamic linearization, and full-form dynamic linearization; a series of control system design methods, including MFAC prototype, model-free adaptive predictive control, model-free adaptive iterative learning control, and the corresponding stability analysis and typical applications in practice. In addition, some other important issues related to MFAC are also discussed. They are the MFAC for complex connected systems, the modularized controller designs between MFAC and other control methods, the robustness of MFAC, and the symmetric similarity for adaptive control system design. The book is written for researchers who are interested in control theory and control engineering, senior undergraduates and graduated students in engineering and applied sciences, as well as professional engineers in process control.

Self-reference, although a topic studied by some philosophers and known to a number of other disciplines, has received comparatively little explicit attention. For the most part the focus of studies of self-reference has been on its logical and linguistic aspects, with perhaps disproportionate emphasis placed on the reflexive paradoxes. The eight-volume *Macmillan Encyclopedia of Philosophy*, for example, does not contain a single entry in its index under "self-reference"

The Object of the Atlantic is a wide-ranging study of the transition from a concern with sovereignty to a concern with things in Iberian Atlantic literature and art produced between 1868 and 1968. Rachel Price uncovers the surprising ways that concrete aesthetics from Cuba, Brazil, and Spain drew not only on global forms of constructivism but also on a history of empire, slavery, and media technologies from the Atlantic world. Analyzing Jose Marti's notebooks, Joaquim de Sousa Andrade's poetry, Ramiro de Maeztu's essays on things and on slavery, 1920s Cuban literature on economic restructuring, Ferreira Gullar's theory of the "non-object," and neoconcrete art, Price shows that the turn to objects—and from these to new media networks—was rooted in the very philosophies of history that helped form the Atlantic world itself.

This book was written to make the material presented in my book, *Stahlbetonbrücken*, accessible to a larger number of engineers throughout the world. A work in English, the logical choice for this task, had been contemplated as *Stahlbetonbrücken* was still in its earliest stages of preparation. The early success of *Stahlbetonbrücken* provided significant impetus for the writing of *Prestressed Concrete Bridges*, which began soon after the publication of its predecessor. The present work is more than a mere translation of *Stahlbetonbrücken*. Errors in *Stahlbetonbrücken* that were detected after publication have been corrected. New material on the relation between cracking in concrete and corrosion of reinforcement, prestressing with unbonded tendons, skew-girder bridges, and cable-stayed bridges has been added. Most importantly, however, the presentation of the material has been extensively reworked to improve clarity and consistency. *Prestressed Concrete Bridges* can thus be regarded as a thoroughly new and improved edition of its predecessor.

This book reviews concepts and recent advances of biotechnological approaches for livestock production. Indeed, biotechnologies have recently emerged as powerful tools for animal breeding, genetics, production, nutrition, and animal health. Applications to the production of livestock such as cattle, camel, and poultry are detailed. Chapters also present biotechnological applications for diagnostics, animal nutrition, and animal food production.

The Nurturing Parenting Programs

This book reviews the prevalence and variants of consumer subsidies found in the developing world and the effectiveness of these subsidies for the poor. It places consumer subsidies in a broader social protection framework and compares them with poverty-focused programmes in other sectors using a common metric. It concludes that the most common subsidy instruments perform poorly in comparison with most other transfer mechanisms. Alternative consumption and connection subsidy mechanisms show more promise, especially when combined with complementary non-price approaches to making utility services accessible and affordable to poor households. The many factors contributing to those outcomes are dissected, identifying those that can be controlled and used to improve performance.

Modeling the Psychopathological Dimensions of Schizophrenia: From Molecules to Behavior is the first book to offer a comprehensive review of the new theoretical, clinical, and basic research framework that considers psychotic illness as a group of dimensional representations of psychopathology rather than as traditional distinct categorical diagnoses. Psychotic illness, typified by schizophrenia, is a devastating condition increasingly recognized as a disorder of abnormal brain development and dysconnectivity. Its complex etiology involves both genetic and environmental factors, as well as the interplay among them. This book describes the current understanding of the clinical and pathological features of schizophrenia, with a particular focus on the evolving conceptualization of schizophrenia and related diagnostic categories of psychotic illness as combinations of dimensional abnormalities. It provides an overview of modern strategies for generating cellular and whole animal models of schizophrenia as well as detailed reviews of the specific experimental preparations and paradigms aimed at molecular, developmental, and brain-network mechanisms that are the underlying aspects of abnormal behavior and various aspects of schizophrenia. This groundbreaking book is an authoritative overview of the translational impact of emerging clinical insights on basic research approaches in schizophrenia that will advance the reader's understanding of the five major dimensions of psychopathology in schizophrenia and related psychoses and resolve the genetic and neurobiological underpinnings of these dimensions. Includes reviews of animal models that capture the most recent insights into the etiology and pathogenetic mechanisms of schizophrenia, with an emphasis on the translational potential of these models Contains a series of reviews of recently available cellular models for analysis

of signaling pathways and gene expression, which complement behavioral neuroscience research in schizophrenia Edited and authored by leading researchers in the field of schizophrenia and related psychoses

Data driven control and learning has been developed quickly both in theory and applications recently The deep involvement of information science in practical processes poses enormous challenges to the existing control science and engineering due to their size, distributed nature and complexity Modeling these processes accurately using first principles or identification is almost impossible although these plants produce huge amount of operation data in every moment The high tech hardware software and the cloud computing enable us to perform complex real time computation, which makes implementation of data driven control and method for these complex practical plants possible It would be very significant if we can learn the systems behaviors, discover the relationship of system variables by making full use of on line or off line process data, to directly design controller, predict and assess system states, make decisions, perform real time optimization and conduct fault diagnosis
