

valuing health for regulatory cost effectiveness analysis

[#health valuation](#) [#cost effectiveness analysis](#) [#regulatory economic evaluation](#) [#health economics for policy](#)
[#value based healthcare regulation](#)

Explore the crucial intersection of health valuation and regulatory cost-effectiveness analysis. This content delves into how economic principles are applied to assess the societal benefits of health interventions, guiding informed policy decisions and ensuring efficient resource allocation within regulatory frameworks. Understand the methodologies used to quantify health outcomes and their economic impact for effective governance.

Valuing Health for Regulatory Cost-Effectiveness Analysis

Promoting human health and safety by reducing exposures to risks and harms through regulatory interventions is among the most important responsibilities of the government. Such efforts encompass a wide array of activities in many different contexts: improving air and water quality; safeguarding the food supply; reducing the risk of injury on the job, in transportation, and from consumer products; and minimizing exposure to toxic chemicals. Estimating the magnitude of the expected health and longevity benefits and reductions in mortality, morbidity, and injury risks helps policy makers decide whether particular interventions merit the expected costs associated with achieving these benefits and inform their choices among alternative strategies. Valuing Health for Regulatory Cost-Effectiveness Analysis provides useful recommendations for how to measure health-related quality-of-life impacts for diverse public health, safety, and environmental regulations. Public decision makers, regulatory analysts, scholars, and students in the field will find this an essential review text. It will become a standard reference for all government agencies and those consultants and contractors who support the work of regulatory programs.

Valuing Health Care

This book is about the cost effectiveness of present and future medical technologies. Methods of analyzing cost effectiveness are described in terms of choices that take into consideration dollar values of treatment, quality of life and the rationale for deciding who should receive treatment in situations of rationed care. Essays in the book range from lay level to technical state of the art, making the book of interest to a wide variety of readers.

Valuing Health Risks, Costs, and Benefits for Environmental Decision Making

"Cost-effectiveness analysis (CEA) has become the mainstay of many health care systems to estimate the value of medical interventions, and is used at least as a reference point in many more. The subject is taught widely in graduate programs involving health care, such as Master of Public Health, Master of Public Policy, and courses in medical schools and graduate business school courses. It is also taught extensively through online and in-person courses from such organizations as the Society for Medical Decision Making and ISPOR-The International Society for Pharmacoeconomics

and Outcomes Research, which has approximately 15,000 world-wide members. The Tufts University registry of CEA studies now contains over 11,000 entries. Clearly, cost-effectiveness analysis is a large and active "industry."--

Valuing Health

"The Guide, in Part I, begins with a brief description of generalized CEA and how it relates to the two questions raised above. It then considers issues relating to study design, estimating costs, assessing health effects, discounting, uncertainty and sensitivity analysis, and reporting results. Detailed discussions of selected technical issues and applications are provided in a series of background papers, originally published in journals, but included in this book for easy reference in Part II." (from the back cover).

Valuing Health Care

As health costs in the U.S. soar past \$1.5 trillion, much evidence indicates that the nation does not get good value for its money. It is widely agreed that we could do better by using cost-effective analysis (CEA) to help determine which health care services are most worthwhile. American policy makers, however, have largely avoided using CEA, and researchers have devoted little attention to understanding why this is so. By considering the economic, social, legal, and ethical factors that contribute to the situation, and how they can be negotiated in the future, this book offers a unique perspective. It traces the roots of EA in health and medicine, describes its promise for rational resource allocation, and discusses the nature of the opposition to it, using Medicare and the Oregon health plans as examples. In exploring the disconnection between the promise of CEA and the persistent failure of rational intentions, the book seeks to find common ground and practical solutions. It analyzes the prospects for change and presents a roadmap for getting there. It offers pragmatic advice for cost-effectiveness analysts, discussing ways in which they can better translate their research findings into the basis for action. The book also offers advice for policy makers and politicians, including lessons from Europe, Canada, and Australia, and underlines the need for leadership to establish the conditions for change.

Making Choices in Health

A comprehensive account of what it means to quantify health in distributing resources for health care.

Using Cost-Effectiveness Analysis to Improve Health Care

Promoting human health and safety by reducing exposures to risks and harms through regulatory interventions is among the most important responsibilities of the government. Such efforts encompass a wide array of activities in many different contexts: improving air and water quality; safeguarding the food supply; reducing the risk of injury on the job, in transportation, and from consumer products; and minimizing exposure to toxic chemicals. Estimating the magnitude of the expected health and longevity benefits and reductions in mortality, morbidity, and injury risks helps policy makers decide whether particular interventions merit the expected costs associated with achieving these benefits and inform their choices among alternative strategies. Valuing Health for Regulatory Cost-Effectiveness Analysis provides useful recommendations for how to measure health-related quality of- life impacts for diverse public health, safety, and environmental regulations. Public decision makers, regulatory analysts, scholars, and students in the field will find this an essential review text. It will become a standard reference for all government agencies and those consultants and contractors who support the work of regulatory programs.

Cost-Value Analysis in Health Care

"The author explains concisely and clearly the problems of health sector choice from first principles, in an approach that will be particularly useful to healthcare professionals, pharmaceutical industry managers, and students of economics."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

Valuing Health for Regulatory Cost-Effectiveness Analysis

It is becoming increasingly important to examine the relationship between the outcomes of a clinical trial and the costs of the medical therapy under study. The results of such analysis can affect reimbursement

decisions for new medical technologies, drugs, devices or diagnostics. It can aid companies seeking to make claims about the cost-effectiveness of their product, as well as allowing early consideration of the economic value of therapies which may be important to improving initial adoption decisions. It is also vital for addressing the requirements of regulatory bodies. *Economic Evaluation in Clinical Trials* provides practical advice on how to conduct cost-effectiveness analyses in controlled trials of medical therapies. This new edition has been extensively rewritten and revised; topics discussed range from design issues such as the types of services that should be measured and price weights, to assessment of quality-adjusted life years. Illustrative materials, case histories and worked examples are included to encourage the reader to apply the methods discussed. These exercises are supported with datasets, programmes and solutions made available online.

Valuing Health in Practice

This new edition incorporates revised guidance from H.M Treasury which is designed to promote efficient policy development and resource allocation across government through the use of a thorough, long-term and analytically robust approach to the appraisal and evaluation of public service projects before significant funds are committed. It is the first edition to have been aided by a consultation process in order to ensure the guidance is clearer and more closely tailored to suit the needs of users.

Economic Evaluation in Clinical Trials

Cost-benefit Analysis of Environmental Health Interventions clearly articulates the core principles and fundamental methodologies underpinning the modern economic assessment of environmental intervention on human health. Taking a practical approach, the book provides a step-by-step approach to assigning a monetary value to the health benefits and disbenefits arising from interventions, using environmental information and epidemiological evidence. It summarizes environmental risk factors and explores how to interpret and understand epidemiological data using concentration-response, exposure-response or dose-response techniques, explaining the environmental interventions available for each environmental risk factor. It evaluates in detail two of the most challenging stages of Cost-Benefit Analysis in 'discounting' and 'accounting for uncertainty'. Further chapters describe how to analyze and critique results, evaluate potential alternatives to Cost-Benefit Analysis, and on how to engage with stakeholders to communicate the results of Cost-Benefit Analysis. The book includes a detailed case study how to conduct a Cost-Benefit Analysis. It is supported by an online website providing solution files and detailing the design of models using Excel. Provides a clear understanding of the core theory of cost-benefit analysis in environmental health interventions Provides practical guidance using real-world case studies to motivate and expand understanding Describes the challenging 'discounting' and 'accounting for uncertainty' problems at chapter length Supported by a practical case study, online solution files, and a practical guide to the design of CBA models using Excel

The Green Book

That America's natural environment has been degraded and despoiled over the past 25 years is beyond dispute. Nor has there been any shortage of reasons why-short-sighted politicians, a society built on over-consumption, and the dramatic weakening of environmental regulations. In *Retaking Rationality*, Richard L. Revesz and Michael A. Livermore argue convincingly that one of the least understood-and most important-causes of our failure to protect the environment has been a misguided rejection of reason. The authors show that environmentalists, labor unions, and other progressive groups have declined to participate in the key governmental proceedings concerning the cost-benefit analysis of federal regulations. As a result of this vacuum, industry groups have captured cost-benefit analysis and used it to further their anti-regulatory ends. Beginning in 1981, the federal Office of Management and Budget and the federal courts have used cost-benefit analysis extensively to determine which environmental, health, and safety regulations are approved and which are sent back to the drawing board. The resulting imbalance in political participation has profoundly affected the nation's regulatory and legal landscape. But Revesz and Livermore contend that economic analysis of regulations is necessary and that it needn't conflict with-and can in fact support-a more compassionate approach to environmental policy. Indeed, they show that we cannot give up on rationality if we truly want to protect our natural environment. *Retaking Rationality* makes clear that by embracing and reforming cost-benefit analysis, and by joining reason and compassion, progressive groups can help enact strong environmental and public health regulation.

Cost-Benefit Analysis of Environmental Health Interventions

In this book the authors explore the state of the art on efficiency measurement in health systems and international experts offer insights into the pitfalls and potential associated with various measurement techniques. The authors show that: - The core idea of efficiency is easy to understand in principle - maximizing valued outputs relative to inputs, but is often difficult to make operational in real-life situations - There have been numerous advances in data collection and availability, as well as innovative methodological approaches that give valuable insights into how efficiently health care is delivered - Our simple analytical framework can facilitate the development and interpretation of efficiency indicators.

Retaking Rationality

Representing the first book on the topic, this work offers the reader an introduction to the Japanese systems for health technology assessment (HTA) officially introduced by the Ministry of Health, Labour and Welfare (MHLW) in 2016. Policy and guidelines are discussed, with the relevant methods and conditions of cost-effectiveness analysis explained alongside. Numerous instructive examples and exercises, ranging from basic to advanced, impart valuable knowledge and insight on the quantitative methods for economic evaluation, which will appeal to both beginners and experts. This guidebook is authored by Japan's foremost expert in HTA and pharmacoeconomics, with a view to strengthening the reader's expertise in value-based healthcare and decision-making. The methods presented are essential to informing regulatory, local and patient decisions; as such, the book is equally recommended to industry and government, as well as academia, and anyone with an interest in Japanese HTA.

Health System Efficiency

Preceded by: Cost-effectiveness in health and medicine / edited by Marthe R. Gold ... [et al.]. New York: Oxford University Press, 1996.

Health Technology Assessment in Japan

Defining the value in health care and elaborating appropriate value-propositions for health care beneficiaries poses numerous empirical and normative challenges. Different methods of Health Technology Assessments (HTAs) embedded in various interdisciplinary approaches of defining the value of health care have been established in recent years. Current initiatives aim to develop and combine transnational attempts to define an overall acceptable range for value-based healthcare interventions. In this book international scholars with background in medicine, philosophy, health-economics and further disciplines, who participated in an interdisciplinary conference in 2019 combine in-depth analyses with reflections informed by multidisciplinary debates on a pressing issue in healthcare.

Cost-Effectiveness in Health and Medicine

V.1. Influences of public health. v.2. Methods of public health. v.3. Applications in public health.

Defining the Value of Medical Interventions

The field's bestselling reference, updated with the latest tools, data, techniques, and the latest recommendations from the Second Panel on Cost-Effectiveness in Health and Medicine Cost-Effectiveness Analysis in Health is a practical introduction to the tools, methods, and procedures used worldwide to perform cost-effective research. Covering every aspect of a complete cost-effectiveness analysis, this book shows you how to find which data you need, where to find it, how to analyze it, and how to prepare a high-quality report for publication. Designed for the classroom or the individual learner, the material is presented in simple and accessible language for those who lack a biostatistics or epidemiology background, and each chapter includes real-world examples and "tips and tricks" that highlight key information. Exercises throughout allow you to test your understanding with practical application, and the companion website features downloadable data sets for students, as well as lecture slides and a test bank for instructors. This new third edition contains new discussion on meta-analysis and advanced modeling techniques, a long worked example using visual modeling software TreeAge Pro, and updated recommendations from the U.S. Public Health Service's Panel on Cost-Effectiveness in Health and Medicine. This is the second printing of the 3rd Edition, which has been corrected and revised for 2018 to reflect the latest standards and methods. Cost-effectiveness analysis is used to evaluate medical interventions worldwide, in both developed and developing countries. This book provides process-specific instruction in a concise, structured format to give you a robust working

knowledge of common methods and techniques. Develop a thoroughly fleshed-out research project Work accurately with costs, probabilities, and models Calculate life expectancy and quality-adjusted life years Prepare your study and your data for publication Comprehensive analysis skills are essential for students seeking careers in public health, medicine, biomedical research, health economics, health policy, and more. Cost-Effectiveness Analysis in Health walks you through the process from a real-world perspective to help you build a skillset that's immediately applicable in the field.

Oxford Textbook of Public Health: Influences of public health

This primer highlights both the strengths and the limitations of benefit-cost analysis in the development, design, and implementation of regulatory reform.

Cost-Effectiveness Analysis in Health

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

Benefit-cost Analysis in Environmental, Health, and Safety Regulation

This book discusses the current topic of Federal Government regulations increasingly assessed by asking whether the benefits of the regulation justifies the cost of the regulation.

Price Setting and Price Regulation in Health Care

This white paper sets out proposals for a detailed programme of action to repair damage done to the environment in the past, and urges everyone to get involved in helping nature to flourish at all levels - from neighbourhoods to national parks. The plans are directly linked to the groundbreaking research in the National Ecosystem Assessment that showed the strong economic arguments for safeguarding and enhancing the natural environment. They also act on the recommendations of 'Making Space for Nature', a report into the state of England's wildlife sites, led by Professor John Lawton and published in September 2010, which showed that England's wildlife sites are fragmented and not able to respond to the pressures of climate change and other pressures we put on our land. Key measures proposed include: i) Reconnecting nature with New Nature Improvement Areas (NIAs) with a £7.5 million fund for 12 initial NIAs, biodiversity offsetting, New Local Nature Partnerships with £1 million available this year, phasing out peat, ii) Connecting people and nature for better quality of life with Green Areas Designation, better urban green spaces; more children experiencing nature by learning outdoors, strengthening local public health activities, the new environmental volunteering initiative "Muck in 4 Life" to improve places in towns and countryside for people and nature to enjoy and iii) Capturing and improving the value of nature with a Natural Capital Committee; an annual statement of green accounts for UK Plc, a business-led Task Force to expand the UK business opportunities from new products and services which are good for the economy and nature alike.

The Cost-benefit State

Staff Discussion Notes showcase the latest policy-related analysis and research being developed by individual IMF staff and are published to elicit comment and to further debate. These papers are generally brief and written in nontechnical language, and so are aimed at a broad audience interested in economic policy issues. This Web-only series replaced Staff Position Notes in January 2011.

The natural choice

The book presents a major meta-analysis of 'value of a statistical life' (VSL) estimates derived from surveys where people around the world have been asked about their willingness to pay for small reduction in mortality risks.

Estimating the Costs of Financial Regulation

Mental, neurological, and substance use disorders are common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies. Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. This evidence-base can help policy makers in resource-constrained settings as they prioritize programs and interventions to address these disorders.

Mortality Risk Valuation in Environment, Health and Transport Policies

In today's world of scarce resources, determining the optimal allocation of funds to preventive health care interventions (PHIs) is a challenge. The upfront investments needed must be viewed as long term projects, the benefits of which we will experience in the future. The long term positive change to PHIs from economic investment can be seen across multiple sectors such as health care, education, employment and beyond. Applied Health Economics for Public Health Practice and Research is the fifth in the series of Handbooks in Health Economic Evaluation. It presents new research on health economics methodology and application to the evaluation of public health interventions. Looking at traditional as well as novel methods of economic evaluation, the book covers the history of economics of public health and the economic rationale for government investment in prevention. In addition, it looks at principles of health economics, evidence synthesis, key methods of economic evaluation with accompanying case studies, and much more. Looking to the future, Applied Health Economics for Public Health Practice and Research presents priorities for research in the field of public health economics. It acknowledges the role played by natural environment in promoting better health, and the place of genetics, environment and socioeconomic status in determining population health. Ideal for health economists, public health researchers, local government workers, health care professionals, and those responsible for health policy development. Applied Health Economics for Public Health Practice and Research is an important contribution to the economic discussion of public health and resource allocation.

Disease Control Priorities, Third Edition (Volume 4)

This guide helps officials use perception surveys for evaluating and communicating progress in regulatory reform. It explains the challenges involved in the design and use of business and citizen perception surveys – and ways to overcome them.

Applied Health Economics for Public Health Practice and Research

The Asian Development Bank (ADB) has been continuously undertaking measures to enhance the effectiveness of its operations. To improve projects both at the preparation and implementation stages, ADB issued the Guidelines for Economic Analysis of Projects in 1997 as a means to enhancing project quality at entry. The conduct of proper economic analysis helps ensure the efficient use of development funds and public resources and thereby increase aid effectiveness. This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost-benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. These case studies illustrate the application of suggested methodologies, taking into account sector-specific needs, as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for conduct of economic analysis.

Measuring Regulatory Performance A Practitioner's Guide to Perception Surveys

This book highlights the analytics and optimization issues in healthcare systems, proposes new approaches, and presents applications of innovative approaches in real facilities. In the past few decades, there has been an exponential rise in the application of swarm intelligence techniques for solving complex and intricate problems arising in healthcare. The versatility of these techniques has made them a favorite among scientists and researchers working in diverse areas. The primary objective of this book is to bring forward thorough, in-depth, and well-focused developments of hybrid variants of swarm intelligence algorithms and their applications in healthcare systems.

Cost-Benefit Analysis for Development

The Encyclopedia of Health Economics offers students, researchers and policymakers objective and detailed empirical analysis and clear reviews of current theories and policies. It helps practitioners such as health care managers and planners by providing accessible overviews into the broad field of health economics, including the economics of designing health service finance and delivery and the economics of public and population health. This encyclopedia provides an organized overview of this diverse field, providing one trusted source for up-to-date research and analysis of this highly charged and fast-moving subject area. Features research-driven articles that are objective, better-crafted, and more detailed than is currently available in journals and handbooks. Combines insights and scholarship across the breadth of health economics, where theory and empirical work increasingly come from non-economists. Provides overviews of key policies, theories and programs in easy-to-understand language.

Artificial Intelligence in Healthcare

An in-depth assessment of the most recent conceptual and methodological developments in cost-benefit analysis and the environment.

Encyclopedia of Health Economics

"This thoughtful and comprehensive book represents the best work I have seen on the current situation concerning medication policies in the EU. It is not just that this is a very up-to-date compendium of facts and data across a wide variety of domains that impact on pharmaceutical regulation. The book is also strong on analysis of those facts as well." Jerry Avorn, Harvard Medical School. "This book offers a comprehensive examination of approaches to manage pharmaceutical expenditures in Europe. It is a must-read for those who seek to understand and navigate the changing regulatory environment for medicines in the European Union." Bernie O'Brien, McMaster University, Canada. The rising cost of pharmaceutical expenditures in many European countries is of concern to governments required to make effective use of health care budgets. Taking a broad perspective that encompasses institutional, political and supranational aspects of pharmaceutical regulation, this book examines approaches used to manage pharmaceutical expenditure across Europe and what impact these strategies have had on efficiency, quality, equity and cost of pharmaceutical care. *Regulating Pharmaceuticals in Europe* is an important book for students of health policy, regulation and management, and for health managers and policy makers. The editors: Elias Mossialos is Brian Abel-Smith Professor of Health Policy at the London School of Economics and Political Science and a Research Director of the European Observatory on Health Systems and Policies. Monique Mrazek is a Health Economist (Europe and Central Asia region) for the World Bank and formerly a Research Officer in Health Economics for the European Observatory on Health Systems and Policies. Tom Walley is Professor of Clinical Pharmacology at the University of Liverpool and Director of the UK National Health Technology Assessment Programme. Contributors: Julia Abelson, Christa Altenstetter, Vittorio Bertele', Christine Bond, Marcel L. Bouvy, Colin Bradley, Steve Chapman, Anna Dixon, Michael Drummond, Pierre Durieux, Edzard Ernst, Armin Fidler, Eric Fortess, Richard Frank, Silvio Garattini, Leigh Hancher, Ebba Holme Hansen, Steve Hudson, Kees de Jonchere, Panos Kanavos, Sjoerd Kooiker, Jean-Marc Leder, Graham Lewis, Donald W. Light, Alistair McGuire, Elias Mossialos, Monique Mrazek, Maria Pia Orru', Govin Permanand, Guenka Petrova, Munir Pirmohamed, Dennis Ross-Degnan, Frans Rutten, Steven Soummerai, David Taylor, Sarah Thomson, Tom Walley.

Cost-Benefit Analysis and the Environment Recent Developments

This publication presents recent OECD papers on risk and regulatory policy. They offer measures for developing, or improving, coherent risk governance policies.

EBOOK: Regulating Pharmaceuticals in Europe: Striving for Efficiency, Equity and Quality

As clinical as it sounds to express the value of human lives, health, or the environment in cold dollars and cents, cost-benefit analysis requires it. More disturbingly, this approach is being embraced by a growing number of politicians and conservative pundits as the most reasonable way to make many policy decisions regarding public health and the environment. By systematically refuting the economic algorithms and illogical assumptions that cost-benefit analysts flaunt as fact, Priceless tells a "gripping story about how solid science has been shoved to the backburner by bean counters with ideological

blindness" (In These Times). Ackerman and Heinzerling argue that decisions about health and safety should be made "to reflect not economists' numbers, but democratic values, chosen on moral grounds. This is a vividly written book, punctuated by striking analogies, a good deal of outrage, and a nice dose of humor" (Cass Sunstein, The New Republic). Essential reading for anyone concerned with the future of human health and environmental protection, Priceless "shines a bright light on obstacles that stand in the way of good government decisions".

OECD Reviews of Regulatory Reform Risk and Regulatory Policy Improving the Governance of Risk

Includes table of health system attainment and performance in all member states (191), ranked by eight measures.

Priceless

BE REASONABLE: DO IT MY WAY! The sign on Alan Williams' desk revealed his sense of humour, a man who invited and relished debate, but always recognising that intellectual pursuits were a means to a practical end. Perhaps best known for his work within cost-benefit analysis, Alan Williams was a man of principles who developed guiding values in healthcare economics that embraced and encouraged active intellectual engagement and progression. He was concerned with the philosophical and ethical issues that underpin decision making and his courageous intellectual battles bore new ideas and revised ideology. This compilation of papers and further discussions arising from the Alan Williams tribute conference provides an analysis of the evolution and current status of key concepts in the field. It is highly recommended for health economics professionals and students.

The World Health Report 2000

As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

Do you have any compliments in writing?

No one does this, and it will make you stand out.

If they have completed the review it won't serve.

This give you direction & tells your boss how they can help you.

This is not the time & place to be over- accountable.

If you only do one thing from this video - make it this!

Your goals frame the conversation forward

REMEMBER: Constructive feedback is a good thing!

You are ready to slay!
