How to save 20 to 60 percent on health insurance! The End of Employer-Provided Health Insurance is a comprehensive guide to utilizing new individual health plans to save 20 to 60 percent on health insurance. This book is written to ensure that you, your family, and your company get your fair share of the trillions of dollars the U.S. government will spend subsidizing individual health insurance plans between now and 2025. You will learn how to navigate the Affordable Care Act to save money without sacrificing coverage, and how to choose the plan that offers exactly what you, your family and your company need. Over the next 10 years, 100 million Americans will move from employer-provided to individually purchased health insurance. The purpose of The End of Employer-Provided Health Insurance is to show you how to profit from this paradigm shift while helping you, your family, and your employees get better and safer health insurance at lower cost. It will help you save thousands of dollars per person each year and protect you from the greatest threat to your financial future—our nation's broken employer-provided health insurance system. We are at the beginning of a paradigm shift in the way businesses offer employee health benefits and the way Americans get health insurance—a shift from an employer-driven defined benefit model to an individual-driven defined contribution model. This parallels a similar shift in employer-provided retirement benefits that took place two to three decades ago from defined benefit to defined contribution retirement plans. Written by a world-renowned economist and New York Times best-selling author, this insightful guide explains how individual health insurance offers more to employees than employer-provided plans. Using the techniques outlined in this book, you and your employer will save money on health insurance by migrating from employer-provided health insurance coverage to employer-funded individual plans at a total cost that is 20 percent to 60 percent lower for the same coverage. That's $4,000 to $12,000 in savings per year for a family of four for the same hospitals, same doctors, and same prescriptions.

Living Without Health Insurance

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Monthly Labor Review

Many Americans believe that people who lack health insurance somehow get the care they really need. Care Without Coverage examines the real consequences for adults who lack health insurance. The study presents findings in the areas of prevention and screening, cancer, chronic illness, hospital-based care, and general health status. The committee looked at the consequences of being uninsured for people suffering from cancer, diabetes, HIV infection and AIDS, heart and kidney disease, mental illness, traumatic injuries, and heart attacks. It focused on the roughly 30 million-one in seven-working-age Americans without health insurance. This group does not include the population over 65 that is covered by Medicare or the nearly 10 million children who are uninsured in this country. The main findings of the report are that working-age Americans without health insurance are more likely to receive too little medical care and receive it too late; be sicker and die sooner; and receive poorer care when they are in the hospital, even for acute situations like a motor vehicle crash.
