As the body count increases, Kim and her team unravel a web of dark secrets, bringing them closer to the killer. But one of their own could be in mortal danger. Only this time, Kim might not be strong enough to save them...

Evil Games

Kim felt sickness sweep over her as she watched little Grace dust off her dirty hands. Blonde curls tumbled around her face. Then, Grace disappeared into the crowd. Kim wanted to pause the recording, run outside and grab her to stop what was about to happen. One August afternoon, eight-year-old Grace Lennard skips into the garden of the childcare centre she attends and vanishes into thin air. Rushing to the scene of Grace's disappearance, Detective Kim Stone finds a chilling piece of evidence: the engraved heart bracelet belonging to Melody Jones – the little girl who was taken from a playground exactly twenty-five years ago. Hours before, Steven Harte had walked into Halesowen police station and confessed to having information that would lead Kim to Melody. And he told Kim she'd have a more urgent problem to deal with first. Now Kim must play Steven's twisted game if she's to find Grace alive. With only twenty-four hours to make every second of Steven's interrogation count, and scan his behaviour for hidden clues, Kim and her team soon link Steven to the abduction of several vulnerable girls – two were kept for a year and then released, unharmed – but where are Melody and the others? Then small bones are discovered in the grounds of a local park, and Kim fears the worst. Kim may think she's close to convicting a killer, but the case has got even more complex. A chilling figure from Kim's past is about to reveal a shocking secret that will hit her where it hurts the most. This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
