Kanski's Clinical Ophthalmology

Through eight outstanding editions, Kanski's Clinical Ophthalmology has been the classic specialty textbook, providing the perfect ophthalmology foundation for trainees and a valuable reference source for experienced practitioners. Building on the previous edition by Dr. Brad Bowling, Dr. John Salmon from Oxford University has comprehensively revised the textbook. The 9th Edition retains Dr. Kanski's highly effective format of succinct text and visually dynamic presentation, providing authoritative, focused guidance on the diagnosis and management of ophthalmic disorders. Extremely well organized and comprehensive in scope, this visually stunning book reflects the latest advances in the field, facilitating quick comprehension to enhance learning, aid exam preparation and guide clinical practice. As a general ophthalmic textbook, this is the gold standard. Uses targeted text, bulleted lists, tables, and visual aids to highlight salient points across all ophthalmology subspecialties. Includes 2,600 illustrations, including more than 1,000 new images of common and rare conditions and arrows to show the exact pathology. Features detailed updates on new therapeutic interventions for neurological disease and ocular tumours; new imaging techniques such as OCT, OCT angiography, and MRI; and new topics such as circadian rhythms, graft vs host disease and the effects of Ebola virus infection on the eye. Presents examination techniques in a new, separate chapter and contains new "tips" on key issues in every chapter. Provides up-to-date information on hot topics such as intravitreal treatment with anti-VEGF agents for macular disease, genetic advances in hereditary retinal dystrophies, the use of biological agents in the treatment of uveitis and scleritis and new surgical advances such as MIGS for glaucoma and limbal stem cell grafting.

Moorfields Manual of Ophthalmology

This handbook offers a systematic summary of ophthalmic disease directed towards diagnosis, interim assessment and ongoing management. Now including an extensive online image bank the fourth edition provides rapid access to the information when it is needed, whether in the clinic, theatre or on the ward

Kanski's Synopsis of Clinical Ophthalmology

In Focus Ophthalmology is aimed at all medical and health science students who require an introductory, low cost and highly illustrated guide to this specialty. The material is presented in double page spreads. The left-hand page has a synoptic and highly structured text (normally under the following headings: incidence; clinical features; differential diagnosis; management; prognosis). The right-hand page has a selection of four to six clinical photographs. Ophthalmology In Focus is a convenient pocket size and therefore ideal for quick preparation before ward rounds. Each volume also includes self-assessment material, which is extremely helpful for preparation for examinations. Because of shorter hospital stays and more outpatient treatment, students are less likely to be able to see the full range of conditions on the ward - the books in this series help supply that deficit. Invaluable source of clinical photographs - students are now less able to have the opportunity to see - in real life - the full range of conditions that they are expected to know about and that they may be tested on Synoptic structured text - ideal for quick preparation before ward rounds Includes self-assessment material - picture tests - handy for revision, especially for the all-important 'OSCE' New series name: In Focus New series design Test revised to include more on management Picture tests included in each volume for first time

KANSKI'S CLINICAL OPHTHALMOLOGY INTERNATIONAL EDITION

The Eye: Basic Sciences in Practice provides highly accessible, concise coverage of all the essential basic science required by today's ophthalmologists and optometrists in training. It is also essential reading for those embarking on a career in visual and ophthalmic science, as well as an invaluable,

current refresher for the range of practitioners working in this area. This new fourth edition has now been fully revised and updated in line with current curricula, key research developments and clinical best practice. It succinctly incorporates the massive strides being made by genetics and functional genomics based on the Human Genome Project, the new understanding of how the microbiome affects all aspects of immunology, the remarkable progress in imaging technology now applied to anatomy and neurophysiology, as well as exciting new molecular and other diagnostic methodologies now being used in microbiology and pathology. All this and more collectively brings a wealth of new knowledge to students and practitioners in the fields of ophthalmology and visual science. For the first time, this (print) edition also now comes with bonus access to the complete, fully searchable electronic text - including carefully selected additional information and new video content to further explain and expand on key concepts - making The Eye a more flexible, comprehensive and engaging learning package than ever before. The only all-embracing textbook of basic science suitable for trainee ophthalmologists, optometrists and vision scientists - other books concentrate on the individual areas such as anatomy. Attractive page design with clear, colour diagrams and text boxes make this a much more accessible book to learn from than many postgraduate textbooks. Presents in a readable form an account of all the basic sciences necessary for an understanding of the eye - anatomy, embryology, genetics, biochemistry, physiology, pharmacology, immunology, microbiology and infection and pathology. More on molecular pathology. Thorough updating of the sections on pathology, immunology, pharmacology and immunology. Revision of all other chapters. More colour illustrations Comes with complete electronic version

Clinical Diagnosis in Ophthalmology

This comprehensive compendium helps readers quickly and accurately interpret a broad spectrum of ocular signs. Over 1300 clinical images, angiograms and scans capture the clinical presentation of the full gamut of ophthalmic diseases and disorders, as well as systemic diseases with ocular manifestations.

Oxford Handbook of Ophthalmology

Based on a series of tutorials given to residents in ophthalmology at King Edward VII Hospital, Windsor, UK. Abundantly illustrated in color and summarizes key facts for diagnosis and treatment of ocular disorders. Revision guide and study aid for exams.

Ophthalmology In Focus

This work describes, in a step-by-step way, how to perform the most commonly-used procedures in the primary eye care setting. With its practical approach, it demystifies the subject and is a useful manual for all students and practitioners requiring an introduction to diagnostic and treatment procedures.

The Eye

Drawn from the second edition of Kanski's Clinical Ophthalmology, this slide/tape set is on retinal disorders, and contains booklets which provide a short description of each slide. The commentary on the audio tapes elucidates key points of diagnosis and management.

Signs in Ophthalmology

Titles in the Pocket Tutor series give practical guidance on subjects that medical students and foundation doctors need help with "on the go". Their highly affordable price represents great value for those rotating through modular courses or working on attachment. Topics reflect information needs stemming from today's integrated undergraduate & foundation courses: Common investigations (ECG, Chest X-Ray, etc) Clinical skills (procedures, patient examination, etc) Important and/or complex specialties in which students receive comparatively little dedicated training (psychiatry, renal medicine) Key Points Highly affordable price and convenient pocket size format – fits in back pocket! Ophthalmology receives little teaching time in the medical curriculum, so students often feel ill prepared to deal with eye problems - which are invariably urgent in nature Descriptions of common disorders enhanced by Clinical Scenarios (Patient presents with...) which help students and trainees to recognise and manage common presenting problems

Illustrated Tutorials in Clinical Ophthalmology

Clinical Ophthalmology: A Systematic Approach, 7th Edition, delivers everything you need to know about today's ophthalmology in a state-of-the-art, multimedia format that's ideally suited for rapid reference and efficient, effective retention. Jack Kanski, along with new co-author Brad Bowling, keep you up to date with current practices and evolving techniques for diagnosing and treating ophthalmic disorders - all in a visually rich, bulleted format that facilitates quick comprehension.

Clinical Procedures in Primary Eye Care

With Contributions From Chelvin Sng (National University Health System, Singapore) & Laurence Lim (Singapore National Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesized in this book. While not meant to replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a "model opening statement," followed first by a classification system to aid organization of facts, and then the core explanation in concise short notes. "Exam Tips" are inserted to provide an insight into techniques of answering different types of questions and when appropriate, a "Clinical Approach" section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.

Clinical Ophthalmology

In this book high-quality colour images accompany synoptic text to provide concise but comprehensive cover of ophthalmology.
