### Mental Health-psychiatric Nursing

Mental health is a significant factor in providing effective nursing care for patients in hospital and residential settings. Non-mental health nursing staff often lack the confidence, knowledge and skills to effectively meet the mental health needs of patients who are experiencing psychiatric problems and psychological distress. *Mental Health Care for Nurses: Applying mental health skills in the general hospital* provides a step-by-step guide which will help nurses identify these needs and address them in practice. The first part of *Mental Health Care for Nurses: Applying mental health skills in the general hospital* explores the context of mental health care in hospital and residential settings and provides a practical framework for assessment, planning and delivery of mental health care. The second part explores specific topics such as self-harm and suicide prevention, caring for the patient displaying challenging behaviour, maternal and perinatal mental health problems, mental health problems associated with old age, mood disorders, and illicit drug and alcohol dependence.

### Nursing Concept Care Maps for Safe Patient Care

In this book we have attempted to identify skills which are needed by the psychiatric nurse, and in doing so to identify a body of knowledge unique to the professional psychiatric nurse. The book has been written to demonstrate the basis of a skills approach for both the experienced and the inexperienced nurse to build upon, for we believe that psychiatric nurses, due to both their training and their particular mixture of interests, are well equipped to be in the forefront of psychiatry as a developing art and science. We hope that this book in some small way helps this development. Some of the more recent advances in psychiatric nursing have been reinforced by the publication of a training syllabus for mental nurses (English and Welsh National Boards, 1982). This document highlights the need for a change from a medical model to a social model and from a task-oriented learning experience to a skills approach. We have attempted to reflect this change in emphasis by including such aspects as personal development and self-awareness, human sexuality, the nursing process and counselling skills.
