Atlas and Epitome of Operative Ophthalmology

Excerpt from Atlas and Epitome of Operative Ophthalmology This volume forms a natural and admirable conclusion of the series of Atlases which Professor Haab has prepared and published. Beginning with a thorough discussion of the proper construction of operation-rooms, narcosis both general and local, sterilization as it is applied to ophthalmic instruments, and the theory and practice of disinfection, the main operations upon the eye and its appendages are described with characteristic

fidelity and clearness. The thirty colored lithographic plates portray in a far more satisfactory way than words can the steps of an operation. Next to seeing an operation itself, these are of value, and in most instances give a view of lifelike accuracy. What is omitted in the colored plates is supplied in the text illustrations, of which there are one hundred and fifty. As in the previous volumes of this series, one is impressed with Dr. Haab's wide experience, admirable technic, and sound judgment. The editor, as in the previous books of this series, has compared the translation with the original, and believes that it conveys with faithfulness the authors's meaning. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Atlas and Epitome of Operative Ophthalmology

The second edition of Clinical Atlas of Procedures in Ophthalmic and Oculofacial Surgery provides an overview of a broad range of contemporary, well-established, and accepted ophthalmic surgical procedures with clear illustrations of surgical fundamentals that cover key intraoperative and post-operative points. This new edition of the Atlas includes streamlined, more uniform chapters, book-ended by detailed and instructive tables of indications and complications. More than 1,700 detailed, professionally-rendered line drawings and full-color photographs supplement succinct information on surgical procedures. The high-quality illustrations and images are laid out in a fluid design to help the reader quickly pinpoint the fundamentals of each procedure. With innovations and techniques frequently evolving ophthalmic surgery, the second edition of Clinical Atlas of Procedures in Ophthalmic and Oculofacial Surgery provides the clear and comprehensive platform needed to navigate the fast-moving field of surgical ophthalmology, and will surely continue to prove useful to the trainee, the ophthalmologist, the teacher, and, most importantly, to the patients whom they ultimately serve.

ATLAS & EPITOME OF OPERATIVE O

"A definite visual feast, this book is a prize for any bookshelf." (American Journal of Ophthalmology, review of the last edition) The 3rd Edition of this critically acclaimed source offers unparalleled visual

guidance on state-of-the-art ocular diagnostic imaging, pathology, and surgery. More than 3,400 outstanding photographs and line drawings (over 1,800 in full color) richly capture a full range of common and uncommon eye disorders and the methods used to treat them. And, a bonus CD enables users to incorporate all of the book's images into electronic presentations. Features contributions from 20 world-renowned authorities. Discusses examination, investigation, and diagnosis for each ophthalmic syndrome, as well as relevant embryology, histology, pathology, and ocular manifestations of systemic disease. Offers an organization both by chapter and by ophthalmic subspecialty, making information easy to find. Depicts the very newest imaging and pathology studies and their findings. Covers the latest refractive surgery and LASIK techniques. Delivers over 1,000 completely new illustrations-3,400 in all-over 1,800 in full color. Includes all of the book's images on CD for convenient use in electronic presentations. With 17 additional contributors.

Atlas and Epitome of Ophthalmoscopy and Ophthalmoscopic Diagnosis

Provides an extensive overview of surgical procedures in one affordable volume. The illustrations familiarize the resident, fellow, or ophthalmologist with key intraoperative and postoperative points. The atlas is intended as a "walk-through" to illustrate time-honored surgical techniques. The book's fluid design helps the busy ophthalmologist pinpoint the surgical fundamentals of each procedure. This book presents clear concise information on diagnosis and treatment in an easy to use, convenient format.

Clinical Atlas of Procedures in Ophthalmic and Oculofacial Surgery

Color Atlas of Strabismus Surgery: Strategies and Techniques provides concise, comprehensive descriptions of surgical procedures by one of the world's leading experts. Pediatric ophthalmologists, ophthalmology residents and fellows, as well as general ophthalmologists, will find this atlas to be essential to their work.

Atlas of Clinical Ophthalmology

Unlike other books of its kind, the new Atlas of Oculoplastic and Orbital Surgery offers detailed, step-by-step instructions from initial skin marking and cut to final closure for more than 90 commonly performed oculoplastic, lacrimal, and orbital surgeries. Each step also includes a matching illustration inverted to accommodate the surgeon's actual position during the surgery. In addition to clear instruction, the text for each surgery covers preoperative evaluation discussions, postoperative care instructions, and how to avoid and manage potential complications.

Clinical Atlas of Procedures in Ophthalmic Surgery

The updated Second Edition of this atlas is the definitive pictorial guide to differential diagnosis and treatment of virtually every presenting condition seen in ophthalmologic practice. Specialists from the prestigious Wills Eye Hospital share their expertise in diagnosing and treating congenital and acquired disorders affecting the internal and external structures of the eye. The superb collection of 1,422 illustrations--1,217 in full color--includes sonograms, radiographs, clinical photographs, photomicrographs, and anatomic drawings. This edition features more information on stem cell and genetic research, more radiographic images and explanations of those findings, and descriptions of current methods of laser surgery. A CD-ROM based on this atlas is also available. See Media listing (Montzka) for details. The atlas and CD-ROM can be purchased together as a money-saving package. A Brandon-Hill recommended title.

Atlas and Text-book of Human Anatomy

This is the first book to cover all currently available methods to manage pre-, intra- and post-lacrimal sac stenosis. Comprehensive multidisciplinary approaches in adults and children are described. International experts provide a stepwise analysis and describe the clinical management of these patients with detailed medical and surgical treatment plans. With this guide's highly structured and reader-friendly format, the reader will be able to solve any problem that may occur with the reconstruction of a disturbed or damaged lacrimal system.

Atlas and epitome of ophthalmoscopy and ophthalmoscopic diagnosis

The second edition of this comprehensive, 1032-pages text and atlas provides ophthalmic surgeons and trainees with the latest advances and techniques in their field. Divided into ten sections, the

book begins with an overview of the basic principles of ophthalmic surgery. Each of the following sections is dedicated to surgical procedures for diseases and disorders in different parts of the eye. Surgical techniques are explained in a step by step format and each section is colour-coded for easy cross reference and navigation. Ethics and medico-legal issues are also discussed in depth. Authored by internationally recognised experts in ophthalmic surgery, this new edition has been fully revised and updated. Nearly 1000 clinical photographs, illustrations and tables further enhance the extensive text. Key points Comprehensive text and atlas providing latest advances and techniques in ophthalmic surgery Fully revised, second edition with nearly 1000 photographs, illustrations and tables Internationally recognised author team Previous edition (9789351525004) published in 2015

Atlas of Oculoplastic and Orbital Surgery

The distinguished authors have perfected the most frequently performed oculoplastic surgical techniques. The Atlas is designed to instruct all ophthalmologists who wish to learn these techniques. Mastery of these procedures is made easy by numerous superbly illustrated step-by-step instructions. The study of the supporting anatomy, followed by clear-cut guidelines with heavily illustrated techniques, offers a format that allows the learner to gain the necessary understanding for achieving a more favourable result.

The Wills Eye Hospital Atlas of Clinical Ophthalmology

This full-color atlas is a practical, step-by-step guide to the reconstruction of periocular defects following tumor excision or tissue-loss trauma. The book addresses the specific anatomic concerns in each oculofacial sector with tailored surgical principles and techniques designed to improve aesthetic outcomes. Full-color illustrations with detailed explanatory legends depict each step of each surgical technique. Flap design and mobilization are shown directly on surgical photographs, rather than in idealized drawings. The clear, accessible writing style will appeal to ophthalmic and plastic surgeons, non-ophthalmic surgeons, and non-surgical ophthalmic specialists. A companion Website will include an online image bank.

Atlas of Lacrimal Surgery

This full-color atlas describes the most universally-accepted methods of ophthalmic surgery in a step-by-step manner using action color photography and, where necessary, graphics to clarify and explain details. In this new edition, each illustration will have an accompanying legend so that experienced ophthalmologists can quickly refresh themselves on particular techniques without having to read the text in detail.

Oculoplastic Surgery Atlas

Part of the Essentials in Ophthalmology series, this atlas is designed to comprehensively cover optical coherence tomography of the anterior segment of the eye. The aim is to improve knowledge of the fundamentals of OCT technology for anterior segment, clarify the differences with posterior segment OCT and emphasize the immense relevance and usefulness that anterior segment OCT study has for diagnosis, therapeutic orientation, surgical guidance, and improvement in patient management. Atlas of Anterior Segment Optical Coherence Tomography is organized into comprehensive chapters on the following topics: fundamentals, technologies and technological differences among platforms, application of OCT, corneal OCT angiography, as well as case-based chapters. Numerous highly-detailed figures, illustrations and photographs make this an ideal resource for the corneal specialist seeking further instruction on this cutting-edge technology. The case-based chapters include such conditions as bowman dystrophies, trauma, cataract, glaucoma, sclera, refractive surgery, ocular infections, and are structured to facilitate the consultant surgeon by providing practical information applicable to practical cases in their practice.

Atlas of Oculofacial Reconstruction

With over 1000 superlative colour photographs, the first edition of Clinical eye Atlas is the most remarkable value and practical source available for the diagnosis and treatment of eye disorders and systematic diseases with eye manifestations. Superlative colour illustrations - representing the best of the authors' collection-guide the physician through ophthalmic diagnosis. There are several photographs for each condition, along with an outlined summary of all that is needed for treatment. A remarkable value, Clinical eye Atlas is an unbeatable, visual guide to confirm diagnosis and provide a quick review of what is needed for treatment.

Atlas of Ophthalmic Surgery

"A definite visual feast, this book is a prize for any bookshelf." (American Journal of Ophthalmology, review of the last edition) The 3rd Edition of this critically acclaimed source offers unparalleled visual guidance on state-of-the-art ocular diagnostic imaging, pathology, and surgery. More than 3,400 outstanding photographs and line drawings (over 1,800 in full color) richly capture a full range of common and uncommon eye disorders and the methods used to treat them. Features contributions from 20 world-renowned authorities. Discusses examination, investigation, and diagnosis for each ophthalmic syndrome, as well as relevant embryology, histology, pathology, and ocular manifestations of systemic disease. Offers an organization both by chapter and by ophthalmic subspecialty, making information easy to find. Depicts the very newest imaging and pathology studies and their findings. Covers the latest refractive surgery and LASIK techniques. Delivers over 1,000 completely new illustrations—3,400 in all—over 1,800 in full color.

ATLAS & EPITOME OF OPHTHALMOSC

Lavishly illustrated with layered anatomical artwork, *Atlas of Clinical and Surgical Orbital Anatomy*, 3rd Edition, provides a rich visual resource for ophthalmic, oculoplastic, and other surgeons to fully understand relevant orbital anatomic structures as well as their clinical and surgical correlations. Under the expert authorship of Dr. Jonathan J. Dutton, this fully revised edition demonstrates complex structures through unique illustrations and comprehensive coverage from embryology through adult anatomy, helping clinicians enhance their diagnostic and surgical expertise. Features layered anatomical illustrations that use multiple sequential artworks to display relevant structures and highlight key intricacies, as well as sectional anatomic correlations with CT and MRI. Depicts each system three-dimensionally through illustrations in frontal, lateral, and superior views, drawn from layered 150-micron histologic sections through human orbits. Discusses every anatomic system from embryology to adult anatomy and correlates individual structures with the most common clinical disorders and diseases. Includes expanded discussions in the Clinical Correlations chapter sections to include more disease conditions of interest to ophthalmologists, otolaryngologists, and plastic surgeons. Contains a new chapter on the Nasal Cavity and Paranasal Sinuses covering relevant anatomy and how these structures relate to orbital disease, trauma, and surgery. Offers a new discussion of surgical procedures and their relation to orbital anatomy, including bony orbital decompression, orbital floor fracture repair, strabismus surgery, oculocardiac reflex with EOM surgery, optic nerve fenestration, blepharoptosis, blepharoplasty, entropion, entropion, transvenous embolization for carotic-cavernous fistula, subperiosteal hematoma drainage, orbital exenteration, and more. Provides updated references and discussions in every chapter based on the most recent literature.

Oculoplastic Surgery Atlas

Since its inception two generations ago, oculoplastic surgery has constantly evolved. What was once dogma may now be passé. Procedures that were once passé may be resurrected and utilized again. Providing simplified solutions to complex problems, *Atlas of Oculoplastic and Orbital Surgery* is a practical, problem-orientated guide to the management of common oculoplastic and orbital disorders. Based on Dr. Spoor's thirty years of practice, the book emphasizes the more common oculoplastic conditions likely to present to a busy ophthalmologist. The text covers upper and lower eyelid surgery and repair, orbital surgery, and the prevention and treatment of potential complications. The procedures are described with surgical photos and illustrations in a casual, didactic fashion, as a senior doctor would use instructing a resident or fellow. The book is essential reading for ophthalmologists, oculoplastic surgeons, neuro-ophthalmologists and plastic surgeons.

Atlas of Ophthalmic Surgery: Strabismus and glaucoma

The quintessential video atlas on anterior segment surgery from world-renowned pioneer and international experts! Disorders of the anterior segment are a leading cause of ocular morbidity. As a result of structural abnormalities associated with trauma, degeneration, developmental disorders, or iatrogenic causes, reconstruction is required. Significant breakthroughs have been made in anterior segment reconstructive approaches, including the use of stem cells, selective tissue transplant, glued lenses, and advanced suturing techniques. *Video Atlas of Anterior Segment Repair and Reconstruction: Managing Challenges in Cornea, Glaucoma, and Lens Surgery* by renowned ophthalmic surgery pioneers Amar Agarwal, Priya Narang, and international contributors is the most comprehensive resource available to date on anterior segment surgery, reflecting cutting-edge innovations. Five sections and 27 chapters organized by ocular anatomy provide in-depth coverage on reconstructive techniques of the cornea, iris, aqueous drainage, and lens. The book and videos describe and highlight diverse state-of-the-art anterior segment surgery procedures, including limbal cell transplantation, keratoplasty, pupilloplasty, and intraocular lens implantation in deficient capsules. Clinical pearls throughout the concise text provide invaluable insights on surgical nuances and managing potential complications. Key Features Current and future cornea approaches including corneal endothelial reconstruction, pre-Descemet's endothelial keratoplasty, and keratoprosthesis Innovative iris techniques such as single-pass 4-throw pupilloplasty, iridodialysis repair, intraocular lens surgery, and complications and management of cosmetic iris implants Disease-related eye surgery including minimally invasive glaucoma surgery and intraocular lens fixation with double-needle technique 38 high-quality videos by the masters mirror live teaching sessions, providing greater understanding of a diverse spectrum of surgical approaches This is a must-have reference for ophthalmology residents and practicing ophthalmologists, researchers,

and cataract and glaucoma specialists. The high-quality surgical videos and insightful text also provide a robust classroom teaching tool.

Atlas of Anterior Segment Optical Coherence Tomography

Ophthalmic Surgery, edited by Drs. George Spaeth, Helen Danesh-Meyer, Ivan Goldberg, and Anselm Kampik, provides the detailed, full-color, step-by-step guidance you need to master essential ophthalmic surgery procedures. The international team of expert editors and contributors present coverage of the latest surgical developments and video demonstrations of key techniques across subspecialties, including cataract, cornea, refractive, glaucoma, oculoplastic, extra-ocular muscle, vitreoretinal, and ocular tumor procedures. What's more, the fully searchable text, procedural videos, and a downloadable image gallery are all online at www.expertconsult.com, making this multimedia resource the key to performing confidently in the operating room. Refer to the most important steps in each procedure quickly and easily with an appendix of step-by-step hand notes. Perform a wide variety of procedures with confidence using the focused coverage that pinpoints essential information and avoids extraneous details. Saunders Ophthalmology Word Book

A text for finding the correct word and spelling for virtually all ophthalmology terms. Sections cover abbreviations, pharmacology, and medical terminology.

Principles and Practice of Ophthalmology

A general introduction to ophthalmology for medical students, residents, or any health professional who requires a reference for the core information in ophthalmology. It combines critical ophthalmic knowledge with high-quality, color images and drawings. Organized according to the ocular structures and components of the eye exam rather than categories of disease to make it practical and a key learning tool.

Essentials of Ophthalmology

Due to the recent and rapid advances in ophthalmologic technology and research, this Second Edition features many new and updated terms as well as new value added appendices. Stedman's Ophthalmology Words, Second Edition covers burgeoning areas such as radial keratotomy and other new techniques and procedures, in addition to new equipment and instruments. The value-added appendices include clinical anatomic illustrations, sample reports, and drugs by indication. This updated edition is a must-have for any medical language specialist working in the field of ophthalmology and contains over 60,000 entries

Stedman's Ophthalmology Words

Ophthalmic Dictionary and Vocabulary Builder is a desk-size reference for ophthalmic words. The book is divided into different sections to cover every sector of ophthalmology and provides the origins of words to assist learning. Authored by recognised authorities in Canada and the USA, this fourth edition has 150 images and illustrations and a new chapter on refractive surgery and imaging words such as OCT (Optical Coherence Tomography).

Synopsis of Clinical Ophthalmology

Provides an efficient review of all of the most essential clinical and scientific information in ophthalmology. Its concise, well-illustrated, outline-formatted chapters permit rapid mastery of the material. Questions at the end of each chapter and answers at the end of the book allow readers to test their understanding. The organization by common ophthalmologic subspecialties offers a logical approach to a wide spectrum of topics. Numerous tables and mnemonics facilitate learning and retention. A special section reviews the findings of many important clinical studies with which ophthalmologists are expected to be familiar. Hundreds of line illustrations and photographs (50 in full color) highlight anatomic details, common ophthalmic tests, and examples of classic histopathology.

National Library of Medicine Current Catalog

A revised reference on contemporary ophthalmic surgery covering virtually everything the surgeon needs to know about ophthalmic procedures used in the daily care of patients. It includes full preoperative assessment, patient preparation and postoperative care for each operation described.

Clinical Ophthalmology

The Vocabulary Builder is a unique, creative and original book. It organizes words into chapters by sectors and provides origins of ophthalmic words for easy recall and interesting reading. The fourth edition of this Dictionary is well illustrated and written with easy to understand definitions. The book is oriented for fast delivery of meaning and definitions, with the emphasis on simplicity and practicality. It is definitely not a reference tome to give impressive weight to an ophthalmic word and syndrome in a costly compendium. We have prepared a practical book whose function, at the bottom line, is to assist in communication and to help develop vocabulary. A new chapter on refractive surgery has been added to this rapidly expanding subspecialty. Imaging words such as OCT have been added. This ophthalmic dictionary is useful for ophthalmologist and ophthalmic Assistant.

Ophthalmic Dictionary and Vocabulary Builder

Get the quick answers you need on every aspect of clinical ophthalmology and apply them in your day-to-day practice. The latest edition of Ophthalmology by Drs. Yanoff and Duker presents practical, expert, concise guidance on nearly every ophthalmic condition and procedure, equipping you to efficiently overcome whatever clinical challenges you may face. Focus on the clinically actionable information you need thanks to a more streamlined format. Make optimal use of the newest drug therapies, including Anti-VEGF treatment for wet ARMD and bevacizumab treatment for complications of diabetes.

Ophthalmic Word Book

Clinical neuro-ophthalmology is a diverse field which bridges the gap between neurology and ophthalmology. This volume focuses on the clinical skills required for the diagnosis and management of neuro-ophthalmic problems. It gives a brief synopsis of the visual sensory system and covers examination and investigation of the various disorders of the eye. Also considered are disorders of the facial nerve and eyelid function, and neuro-ophthalmic aspects of migraine and other headaches. Full of clinical expertise and erudition, readers will find a concise but authoritative overview of this relatively new specialty.

Ophthalmic Surgery

Written by an international team of ophthalmic practitioners, this authoritative book is a vital resource not only for ophthalmic professionals, but for any healthcare professional who cares for patients with eye problems. In the ten years since the first edition was published, practice has moved on, as has the evidence for practice. This second edition draws on the passion and goodwill of the original team of authors, complemented by other colleagues, to fully revise and update the text in line with new findings, new practice and new and exciting treatments. The book is broadly divided into three sections. The first section considers the structure and function of the eye, as well as the basic principles of ophthalmology and eye examination. The second section considers patient care in diverse settings, as well as work-related issues and patient education. It also includes two entirely new chapters on eye banking and global eye health. The third section takes a systematic approach to patient care, working from the front to the back of the eye, discussing some of the common disorders affecting each structure (such as the lens or cornea) or group of structures (such as the eyelids or lacrimal drainage system). The book concludes with a very useful glossary of ophthalmic terms. Some aspects of practice discussed in the text are, of necessity, UK based, but these are clearly indicated and, wherever possible, principles (rather than specifics) are addressed and readers are directed to local policies and interpretations. The first edition of this book became a core text for ophthalmic nursing, in particular, and for the education of ophthalmic nurses across the world. This new edition will provide a comprehensive, up-to-date, evidence-based resource for all ophthalmic healthcare professionals. Contents include: • Physiology of vision • Optics • Pharmacology • Examination of the eye • Visual impairment • Patient education • Work and the eye • Care of the adult ophthalmic patient in an inpatient setting • The care of the child undergoing ophthalmic treatment • Developments in day care surgery for ophthalmic patients • Ophthalmic theatre nursing • The care of patients presenting with acute problems • Eye banking • Global eye health • The eyelids and lacrimal drainage system • The conjunctiva • The cornea • The sclera • The lens • The uveal tract • The angle and aqueous • The retina and vitreous • The orbit and extraocular muscles • Visual and pupillary pathways and neuro-ophthalmology • The eye and systemic disease

Intro

Mycetoma This subcutaneous infection most commonly occurs in hot temperate parts of the world

Causative organisms grow on organic soil debris Infection begins with trauma implanting organism

into the subcutaneous tissue Three criteria define mycetoma: Swollen extremity from lesion progression

Nocardia species causative in 98% of cases Sulfur granules are formed in tissue. The granules vary in color depending on the *Nocardia* species causing infection The granules contain a matrix of filamentous bacteria that can be visualized at the edge of the stained granule *Nocardia* stain by GMS in tissue samples as thin filamentous branching organisms

Actinomycotic sulfur granule vs Not Look-a-like granules: (1) Sulfur granules due to infection with *Actinomyces* species (an anaerobic Gram positive bacilli) and (2) Botryomycotic "pseudo- sulfur" granules (chronic bacterial abscesses) caused by aerobic bacteria spp.

Nocardia species Besides mycetoma, *Nocardia* spp can also cause primary pulmonary with dissemination to brain. These infections usually occur in severely immune suppressed patients.

Eumycotic Mycetoma Infection most often with numerous species of pigmented/black fungi (dematiaceous molds) found in soil and debris -Cause @2% of mycetoma cases -Infection begins with traumatic implantation of the fungus into the subcutaneous tissue

Chromoblastomycosis (Chromomycosis) . Wart like lesions (scarred and nodular) in subcutaneous and cutaneous tissues/tropical and subtropical areas Skin abrasion and implantation of fungi into tissue Infection caused by black pigmented fungi (dematiaceous)

Phaeohyphomycosis Traumatic implantation of dark fungi into subcutaneous tissue - Infection usually nodular skin lesions or cysts Usually confined to skin but can disseminate, particularly to brain - In fixed tissue, dark brown colored swollen hyphae and yeast like cells *Alemania*, *Curvularia*, *Exophiala* and *Philophora* spp most often

Black molds / Dematiaceous molds • Black colored colonies, both topside and the reverse [underside of colony] • Naturally brown colored hyphae and spores due to melanin production . Commonly found in soil and areas damaged by flooding

Alternaria species- • Opportunistic fungal pathogen commonly found in nature • Sinusitis and phaeohyphomycosis most often • Rare infection in nails or eyes

Most Common *Candida* species . *Candida albicans* cause @ 60% of *Candida* infections, Usually susceptible to fluconazole and other antifungals *C. parapsilosis* is a pathogen of children and common in IV line infections

Candida albicans Identification Germ tube formation Incubate yeast in serum for 3-4 hrs at 35 °C Growth extension from yeast cell = germ tube positive If incubate »4 hrs - *C. tropicalis* can produce a false positive germ tube reaction Note: Test is not specific for *C. albicans*, *C. dubliniensis* can also form germ tubes

Pneumocystis jirovecii • Yeast like fungus Used to be named *Pneumocystis carinii* and considered a protozoan parasite Causes pneumonia in the immunocompromised host (PCP) particularly HIV/AIDS Diagnosis: Bronchial lavage, lung biopsy tissue, induced sputum using direct fluorescent antibody (DFA) and GMS

CUTANEOUS AND SUPERFICIAL MYCOSES

Malassezia furfur - Lipophilic yeast - oil required for growth Media for isolation must contain oil or use an oil overlay Small budding yeast 2 - 4 µm with collarette (appears like necklace at junction of mother and daughter yeast cell) In tissue described as "Spaghetti and Meatballs" due to budding yeast and short hyphal fragments.

Aspergillus species Stains with many stains Thin septate hyphae 45 degree angle branching is helpful to ID Branches can branch (Dichotomous) Invade vessels, cause thrombosis & infarctions Birefringent Calcium oxalate crystals can be present

Aspergillus niger • Black colony - visible black fruiting heads grows in 2-5 days at 30°C . Contaminate fruits and vegetables and found in soil • Invasive disease uncommon, commonly isolated from ear infections • Black conidia supported by phialides that surround the vesicle

Penicillium species - • One of the most common molds in the environment • Common cause of bread mold • Uncommon cause of human disease • Can appear as a culture contaminate Blue/green colony grows in 3-5 days 30°C • Branching hyphae with conidia production Appears like a bony hand Colors of Mycology - a look into selective and differential media in mushroom cultivation - Colors of Mycology - a look into selective and differential media in mushroom cultivation by Fresh from the Farm Fungi 45,376 views 4 years ago 20 minutes - In this video Gary with Fresh from the Farm Fungi explains the uses for differential and selective medias in **mycology** .
