Medical Apartheid

NATIONAL BOOK CRITICS CIRCLE AWARD WINNER • The first full history of Black America's shocking mistreatment as unwilling and unwitting experimental subjects at the hands of the medical establishment. No one concerned with issues of public health and racial justice can afford not to read this masterful book. "[Washington] has unearthed a shocking amount of information and shaped it into a riveting, carefully documented book." —New York Times From the era of slavery to the present day, starting with the earliest encounters between Black Americans and Western medical researchers and the racist pseudoscience that resulted, Medical Apartheid details the ways both slaves and freedmen were used in hospitals for experiments conducted without their knowledge—a tradition that continues today within some black populations. It reveals how Blacks have historically been prey to grave-robbing as well as unauthorized autopsies and dissections. Moving into the twentieth century, it shows how the pseudoscience of eugenics and social Darwinism was used to justify experimental exploitation and shoddy medical treatment of Blacks. Shocking new details about the government's notorious Tuskegee experiment are revealed, as are similar, less-well-known medical atrocities conducted by the government, the armed forces, prisons, and private institutions. The product of years of prodigious research into medical journals and experimental reports long undisturbed, Medical Apartheid reveals

the hidden underbelly of scientific research and makes possible, for the first time, an understanding of the roots of the African American health deficit. At last, it provides the fullest possible context for comprehending the behavioral fallout that has caused Black Americans to view researchers—and indeed the whole medical establishment—with such deep distrust.

Medical Apartheid

NATIONAL BOOK CRITICS CIRCLE AWARD WINNER • The first full history of Black America's shocking mistreatment as unwilling and unwitting experimental subjects at the hands of the medical establishment. No one concerned with issues of public health and racial justice can afford not to read this masterful book. "[Washington] has unearthed a shocking amount of information and shaped it into a riveting, carefully documented book." —New York Times From the era of slavery to the present day, starting with the earliest encounters between Black Americans and Western medical researchers and the racist pseudoscience that resulted, *Medical Apartheid* details the ways both slaves and freedmen were used in hospitals for experiments conducted without their knowledge—a tradition that continues today within some black populations. It reveals how Blacks have historically been prey to grave-robbing as well as unauthorized autopsies and dissections. Moving into the twentieth century, it shows how the pseudoscience of eugenics and social Darwinism was used to justify experimental exploitation and shoddy medical treatment of Blacks. At last, it provides the fullest possible context for comprehending the behavioral fallout that has caused Black Americans to view researchers—and indeed the whole medical establishment—with such deep distrust.

Summary and Brief Analysis of Medical Apartheid

This is the summary and analysis of *Medical Apartheid: The Dark History of Medical Experimentation on Black Americans from Colonial Times to the Present* Harriet A. Washington claims in her book *Medical Apartheid* that medical experimentation on African Americans have been going on for decades, and that this violence is not limited to a few isolated cases. Her book's goal is to highlight the long history of exploitation in order to fix it by bridging the divide between white and black health profiles in America. scroll up and click on the BUY button Disclaimer: this book is not a replacement to the original book but serve as brief summary to the book .

A Terrible Thing to Waste

A "powerful and indispensable" look at the devastating consequences of environmental racism (Gerald Markowitz) -- and what we can do to remedy its toxic effects on marginalized communities. Did you know... Middle-class African American households with incomes between \$50,000 and \$60,000 live in neighborhoods that are more polluted than those of very poor white households with incomes below \$10,000. When swallowed, a lead-paint chip no larger than a fingernail can send a toddler into a coma -- one-tenth of that amount will lower his IQ. Nearly two of every five African American homes in Baltimore are plagued by lead-based paint. Almost all of the 37,500 Baltimore children who suffered lead poisoning between 2003 and 2015 were African American. From injuries caused by lead poisoning to the devastating effects of atmospheric pollution, infectious disease, and industrial waste, Americans of color are harmed by environmental hazards in staggeringly disproportionate numbers. This systemic onslaught of toxic exposure and institutional negligence causes irreparable physical harm to millions of people across the country-cutting lives tragically short and needlessly burdening our health care system. But these deadly environments create another insidious and often overlooked consequence: robbing communities of color, and America as a whole, of intellectual power. The 1994 publication of *The Bell Curve* and its controversial thesis catapulted the topic of genetic racial differences in IQ to the forefront of a renewed and heated debate. Now, in *A Terrible Thing to Waste*, award-winning science writer Harriet A. Washington adds her incisive analysis to the fray, arguing that IQ is a biased and flawed metric, but that it is useful for tracking cognitive damage. She takes apart the spurious notion of intelligence as an inherited trait, using copious data that instead point to a different cause of the reported African American-white IQ gap: environmental racism - a confluence of racism and other institutional factors that relegate marginalized communities to living and working near sites of

toxic waste, pollution, and insufficient sanitation services. She investigates heavy metals, neurotoxins, deficient prenatal care, bad nutrition, and even pathogens as chief agents influencing intelligence to explain why communities of color are disproportionately affected -- and what can be done to remedy this devastating problem. Featuring extensive scientific research and Washington's sharp, lively reporting, *A Terrible Thing to Waste* is sure to outrage, transform the conversation, and inspire debate.

The Impacts of Racism and Bias on Black People Pursuing Careers in Science, Engineering, and Medicine

Despite the changing demographics of the nation and a growing appreciation for diversity and inclusion as drivers of excellence in science, engineering, and medicine, Black Americans are severely underrepresented in these fields. Racism and bias are significant reasons for this disparity, with detrimental implications on individuals, health care organizations, and the nation as a whole. The Roundtable on Black Men and Black Women in Science, Engineering, and Medicine was launched at the National Academies of Sciences, Engineering, and Medicine in 2019 to identify key levers, drivers, and disruptors in government, industry, health care, and higher education where actions can have the most impact on increasing the participation of Black men and Black women in science, medicine, and engineering. On April 16, 2020, the Roundtable convened a workshop to explore the context for their work; to surface key issues and questions that the Roundtable should address in its initial phase; and to reach key stakeholders and constituents. This proceedings provides a record of the workshop.

Black and Blue

Black & Blue is the first systematic description of how American doctors think about racial differences and how this kind of thinking affects the treatment of their black patients. The standard studies of medical racism examine past medical abuses of black people and do not address the racially motivated thinking and behaviors of physicians practicing medicine today. *Black & Blue* penetrates the physician's private sphere where racial fantasies and misinformation distort diagnoses and treatments. Doctors have always absorbed the racial stereotypes and folkloric beliefs about racial differences that permeate the general population. Within the world of medicine this racial folklore has infiltrated all of the medical sub-disciplines, from cardiology to gynecology to psychiatry. Doctors have thus imposed white or black racial identities upon every organ system of the human body, along with racial interpretations of black children, the black elderly, the black athlete, black musicality, black pain thresholds, and other aspects of black minds and bodies. The American medical establishment does not readily absorb either historical or current information about medical racism. For this reason, racial enlightenment will not reach medical schools until the current race-averse curricula include new historical and sociological perspectives.

The Delectable Negro

Winner of the 2015 LGBT Studies Award presented by the Lambda Literary Foundation *Unearths* connections between homoeroticism, cannibalism, and cultures of consumption in the context of American literature and US slave culture that has largely been ignored until now. Scholars of US and transatlantic slavery have largely ignored or dismissed accusations that Black Americans were cannibalized. Vincent Woodard takes the enslaved person's claims of human consumption seriously, focusing on both the literal starvation of the slave and the tropes of cannibalism on the part of the slaveholder, and further draws attention to the ways in which Blacks experienced their consumption as a fundamentally homoerotic occurrence. *The Delectable Negro* explores these connections between homoeroticism, cannibalism, and cultures of consumption in the context of American literature and US slave culture. Utilizing many staples of African American literature and culture, such as the slave narratives of Olaudah Equiano, Harriet Jacobs, and Frederick Douglass, as well as other less circulated materials like James L. Smith's slave narrative, runaway slave advertisements, and numerous articles from Black newspapers published in the nineteenth century, Woodard traces the racial assumptions, political aspirations, gender codes, and philosophical frameworks that dictated both European and white American arousal towards Black males and hunger for Black male flesh. Woodard uses these texts to unpack how slaves struggled not only against social consumption, but also against endemic mechanisms of starvation and hunger designed to break them. He concludes with an examination of the controversial chain gang oral sex scene in Toni Morrison's *Beloved*, suggesting that even at the end of the twentieth and beginning of the twenty-first century, we are still at a loss for language with which to describe Black male hunger within a plantation culture of consumption.

Carte Blanche

Carte Blanche is the alarming tale of how the right of Americans to say "no" to risky medical research is eroding at a time when we are racing to produce a vaccine and treatments for Covid-19. This medical right that we have long taken for granted was first sacrificed on the altar of military expediency in 1990 when the Department of Defense asked for and received from the FDA a waiver that permitted it to force an experimental anthrax vaccine on the ranks of ground troops headed for the Persian Gulf. Since then, the military has pressed ahead to impose nonconsensual testing of the blood substitute PolyHeme in civilian urbanities, quietly enrolling more than 20,000 non-consenting subjects since 2005. Most Americans think that their right to give or withhold consent is protected by law, but the passing in 1996 of modifications to the Code of Federal Regulations, such as statute CFR 21 50.24, now permit investigators to conduct research with trauma victims without their consent or even their knowledge. More than a dozen studies since have used the 1996 loophole to recruit large numbers of subjects without their knowledge. The erosion of consent is the result of a U.S. medical-research system that has proven again and again that it cannot be trusted.

Fatal Invention

An incisive, groundbreaking book that examines how a biological concept of race is a myth that promotes inequality in a supposedly "post-racial" era. Though the Human Genome Project proved that human beings are not naturally divided by race, the emerging fields of personalized medicine, reproductive technologies, genetic genealogy, and DNA databanks are attempting to resuscitate race as a biological category written in our genes. This groundbreaking book by legal scholar and social critic Dorothy Roberts examines how the myth of race as a biological concept—revived by purportedly cutting-edge science, race-specific drugs, genetic testing, and DNA databases—continues to undermine a just society and promote inequality in a supposedly "post-racial" era. Named one of the ten best black nonfiction books 2011 by AFRO.com, *Fatal Invention* offers a timely and "provocative analysis" (Nature) of race, science, and politics that "is consistently lucid . . . alarming but not alarmist, controversial but evidential, impassioned but rational" (Publishers Weekly, starred review). "Everyone concerned about social justice in America should read this powerful book." —Anthony D. Romero, executive director, American Civil Liberties Union "A terribly important book on how the 'fatal invention' has terrifying effects in the post-genomic, 'post-racial' era." —Eduardo Bonilla-Silva, professor of sociology, Duke University, and author of *Racism Without Racists: Color-Blind Racism and the Persistence of Racial Inequality in the United States* "Fatal Invention is a triumph! Race has always been an ill-defined amalgam of medical and cultural bias, thinly overlaid with the trappings of contemporary scientific thought. And no one has peeled back the layers of assumption and deception as lucidly as Dorothy Roberts." —Harriet A. Washington, author of *and Deadly Monopolies: The Shocking Corporate Takeover of Life Itself*

Infectious Madness

"Fascinating...A superb book."--Robert Sapolsky, Stanford professor of neuroscience and neurosurgery and author of *Why Zebras Don't Get Ulcers* What causes mental illness? We've long blamed stress, trauma, and brain-chemistry imbalances. But a new theory is quietly achieving critical mass. In *INFECTIOUS MADNESS*, award-winning science writer Harriet Washington reveals that schizophrenia, obsessive-compulsive disorder, Alzheimer's, and anorexia also may be caused by bacteria, parasites, or viruses. Weaving together cutting-edge research and case studies, *INFECTIOUS MADNESS* shows how strep throat can trigger rapid-onset OCD in a formerly healthy teen and how contact with cat litter elevates the risk of schizophrenia. Featuring a new afterword by the author, and rich in science, medical mysteries, cultural nuance, and evidence-based recommendations, *INFECTIOUS MADNESS* pulls back the curtain on a new paradigm with profound implications for us all.

Against Their Will

During the Cold War, an alliance between American scientists, pharmaceutical companies, and the US military pushed the medical establishment into ethically fraught territory. Doctors and scientists at prestigious institutions were pressured to produce medical advances to compete with the perceived threats coming from the Soviet Union. In *Against Their Will*, authors Allen Hornblum, Judith Newman, and Gregory Dober reveal the little-known history of unethical and dangerous medical experimentation on children in the United States. Through rare interviews and the personal correspondence of renowned medical investigators, they document how children—both normal and those termed "feeble-minded"—from infants to teenagers, became human research subjects in terrifying experiments.

They were drafted as "volunteers" to test vaccines, doused with ringworm, subjected to electric shock, and given lobotomies. They were also fed radioactive isotopes and exposed to chemical warfare agents. This groundbreaking book shows how institutional superintendents influenced by eugenics often turned these children over to scientific researchers without a second thought. Based on years of archival work and numerous interviews with both scientific researchers and former test subjects, this is a fascinating and disturbing look at the dark underbelly of American medical history.

Sick from Freedom

Bondspeople who fled from slavery during and after the Civil War did not expect that their flight toward freedom would lead to sickness, disease, suffering, and death. But the war produced the largest biological crisis of the nineteenth century, and as historian Jim Downs reveals in this groundbreaking volume, it had deadly consequences for hundreds of thousands of freed people. In *Sick from Freedom*, Downs recovers the untold story of one of the bitterest ironies in American history--that the emancipation of the slaves, seen as one of the great turning points in U.S. history, had devastating consequences for innumerable freed people. Drawing on massive new research into the records of the Medical Division of the Freedmen's Bureau--a nascent national health system that cared for more than one million freed slaves--he shows how the collapse of the plantation economy released a plague of lethal diseases. With emancipation, African Americans seized the chance to move, migrating as never before. But in their journey to freedom, they also encountered yellow fever, smallpox, cholera, dysentery, malnutrition, and exposure. To address this crisis, the Medical Division hired more than 120 physicians, establishing some forty underfinanced and understaffed hospitals scattered throughout the South, largely in response to medical emergencies. Downs shows that the goal of the Medical Division was to promote a healthy workforce, an aim which often excluded a wide range of freedpeople, including women, the elderly, the physically disabled, and children. Downs concludes by tracing how the Reconstruction policy was then implemented in the American West, where it was disastrously applied to Native Americans. The widespread medical calamity sparked by emancipation is an overlooked episode of the Civil War and its aftermath, poignantly revealed in *Sick from Freedom*.

The Immortal Life of Henrietta Lacks

Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor black tobacco farmer who worked the same land as her slave ancestors yet her cells - taken without her knowledge - become one of the most important tools in modern medicine.

The Panic Virus

A searing account of how vaccine opponents have used the media to spread their message of panic, despite no scientific evidence to support them.

Medicine and Slavery

Widely regarded as the most comprehensive study of its kind, this volume offers valuable insight into the alleged medical differences between whites and blacks that translated as racial inferiority and were used to justify slavery and discrimination. In *Medicine and Slavery*, Todd L. Savitt evaluates the diet, hygiene, clothing, and living and working conditions of antebellum African Americans, slave and free, and analyzes the diseases and health conditions that afflicted them in urban areas, at industrial sites, and on plantations.

Medicalizing Blackness

In 1748, as yellow fever raged in Charleston, South Carolina, doctor John Lining remarked, "There is something very singular in the constitution of the Negroes, which renders them not liable to this fever." Lining's comments presaged ideas about blackness that would endure in medical discourses and beyond. In this fascinating medical history, Rana A. Hogarth examines the creation and circulation of medical ideas about blackness in the Atlantic World during the late eighteenth and early nineteenth centuries. She shows how white physicians deployed blackness as a medically significant marker of difference and used medical knowledge to improve plantation labor efficiency, safeguard colonial and civic interests, and enhance control over black bodies during the era of slavery. Hogarth refigures Atlantic slave societies as medical frontiers of knowledge production on the topic of racial difference. Rather than looking to their counterparts in Europe who collected and dissected bodies to gain

knowledge about race, white physicians in Atlantic slaveholding regions created and tested ideas about race based on the contexts in which they lived and practiced. What emerges in sharp relief is the ways in which blackness was reified in medical discourses and used to perpetuate notions of white supremacy.

Medical Bondage

The accomplishments of pioneering doctors such as John Peter Mettauer, James Marion Sims, and Nathan Bozeman are well documented. It is also no secret that these nineteenth-century gynecologists performed experimental caesarean sections, ovariectomies, and obstetric fistula repairs primarily on poor and powerless women. *Medical Bondage* breaks new ground by exploring how and why physicians denied these women their full humanity yet valued them as “medical superbodies” highly suited for medical experimentation. In *Medical Bondage*, Cooper Owens examines a wide range of scientific literature and less formal communications in which gynecologists created and disseminated medical fictions about their patients, such as their belief that black enslaved women could withstand pain better than white “ladies.” Even as they were advancing medicine, these doctors were legitimizing, for decades to come, groundless theories related to whiteness and blackness, men and women, and the inferiority of other races or nationalities. *Medical Bondage* moves between southern plantations and northern urban centers to reveal how nineteenth-century American ideas about race, health, and status influenced doctor-patient relationships in sites of healing like slave cabins, medical colleges, and hospitals. It also retells the story of black enslaved women and of Irish immigrant women from the perspective of these exploited groups and thus restores for us a picture of their lives.

Killing the Black Body

Killing the Black Body remains a rallying cry for education, awareness, and action on extending reproductive justice to all women. It is as crucial as ever, even two decades after its original publication. “A must-read for all those who claim to care about racial and gender justice in America.” —Michelle Alexander, author of *The New Jim Crow* In 1997, this groundbreaking book made a powerful entrance into the national conversation on race. In a media landscape dominated by racially biased images of welfare queens and crack babies, *Killing the Black Body* exposed America’s systemic abuse of Black women’s bodies. From slave masters’ economic stake in bonded women’s fertility to government programs that coerced thousands of poor Black women into being sterilized as late as the 1970s, these abuses pointed to the degradation of Black motherhood—and the exclusion of Black women’s reproductive needs in mainstream feminist and civil rights agendas. “Compelling. . . . Deftly shows how distorted and racist constructions of black motherhood have affected politics, law, and policy in the United States.” —Ms.

Deadly Monopolies

From the award-winning author of *Medical Apartheid*, an exposé of the rush to own and exploit the raw materials of life—including yours. Think your body is your own to control and dispose of as you wish? Think again. The United States Patent Office has granted at least 40,000 patents on genes controlling the most basic processes of human life, and more are pending. If you undergo surgery in many hospitals you must sign away ownership rights to your excised tissues, even if they turn out to have medical and fiscal value. Life itself is rapidly becoming a wholly owned subsidiary of the medical-industrial complex. *Deadly Monopolies* is a powerful, disturbing, and deeply researched book that illuminates this “life patent” gold rush and its harmful, and even lethal, consequences for public health. It examines the shaky legal, ethical, and social bases for Big Pharma’s argument that such patents are necessary to protect their investments in new drugs and treatments, arguing that they instead stifle the research, competition, and innovation that can drive down costs and save lives. In opposing the commodification of the body, Harriet Washington provides a crucial human dimension to an often all-too-abstract debate. Like the bestseller *The Immortal Life of Henrietta Lacks*, *Deadly Monopolies* reveals in shocking detail just how far the profit motive has encroached in colonizing human life and compromising medical ethics. It is sure to stir debate—and instigate change.

The Organ Thieves

The Immortal Life of Henrietta Lacks meets *Get Out* in this landmark investigation of racial inequality at the core of the heart transplant race. In 1968, Bruce Tucker, a black man, went into Virginia’s top research hospital with a head injury, only to have his heart taken out of his body and put into the chest of a white businessman. Now, in *The Organ Thieves*, Pulitzer Prize–nominated journalist Chip

Jones exposes the horrifying inequality surrounding Tucker's death and how he was used as a human guinea pig without his family's permission or knowledge. The circumstances surrounding his death reflect the long legacy of mistreating African Americans that began more than a century before with cadaver harvesting and worse. It culminated in efforts to win the heart transplant race in the late 1960s. Featuring years of research and fresh reporting, *The Organ Thieves* is a story that resonates now more than ever, when issues of race and healthcare are the stuff of headlines and horror stories.

Working Cures

Working Cures explores black health under slavery showing how herbalism, conjuring, midwifery and other African American healing practices became arts of resistance in the antebellum South and invoked conflicts.

Silent Cells

A critical investigation into the use of psychotropic drugs to pacify and control inmates and other captives in the vast U.S. prison, military, and welfare systems. For at least four decades, U.S. prisons and jails have aggressively turned to psychotropic drugs—antidepressants, antipsychotics, sedatives, and tranquilizers—to silence inmates, whether or not they have been diagnosed with mental illnesses. In *Silent Cells*, Anthony Ryan Hatch demonstrates that the pervasive use of psychotropic drugs has not only defined and enabled mass incarceration but has also become central to other forms of captivity, including foster homes, military and immigrant detention centers, and nursing homes. *Silent Cells* shows how, in shockingly large numbers, federal, state, and local governments and government-authorized private agencies pacify people with drugs, uncovering patterns of institutional violence that threaten basic human and civil rights. Drawing on publicly available records, Hatch unearths the coercive ways that psychotropics serve to manufacture compliance and docility, practices hidden behind layers of state secrecy, medical complicity, and corporate profiteering. Psychotropics, Hatch shows, are integral to “technocorrectional” policies devised to minimize public costs and increase the private profitability of mass captivity while guaranteeing public safety and national security. This broad indictment of psychotropics is therefore animated by a radical counterfactual question: would incarceration on the scale practiced in the United States even be possible without psychotropics?

The Tuskegee Experiments

Examines the use of six hundred poor and uneducated African American over a forty year period to test the effects of syphilis and the breach of medical ethics involved in the study.

Opening to Spirit

A gifted spiritual guide and a yoga master illustrates the common root of many of our spiritual traditions through the mythology and spirituality of Ancient Egypt, Early India and West Africa. 8 color plates. 40 line drawings.

The World Book Encyclopedia

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

Study Guide to Accompany Barker

A powerful exploration of the past and present arc of America's white supremacy—from the country's inception and Revolutionary years to its 19th century flashpoint of civil war; to the Civil Rights movement of the 1960s and today's Black Lives Matter. “The most profoundly original cultural history in recent memory.” —Henry Louis Gates, Jr., Harvard University “Stunning, timely . . . an achievement in writing public history . . . Teaching White Supremacy should be read widely in our roiling debate over how to teach about race and slavery in classrooms.” —David W. Blight, Sterling Professor of American History, Yale University; author of the Pulitzer Prize-winning *Frederick Douglass: Prophet of Freedom* Donald Yacovone shows us the clear and damning evidence of white supremacy's deep-seated roots in our nation's educational system through a fascinating, in-depth examination of America's wide assortment of texts, from primary readers to college textbooks, from popular histories to the most influential academic scholarship. Sifting through a wealth of materials from the colonial era to today, Yacovone reveals the systematic ways in which this ideology has infiltrated all aspects of American culture and

how it has been at the heart of our collective national identity. Yacovone lays out the arc of America's white supremacy from the country's inception and Revolutionary War years to its nineteenth-century flashpoint of civil war to the civil rights movement of the 1960s and today's Black Lives Matter. In a stunning reappraisal, the author argues that it is the North, not the South, that bears the greater responsibility for creating the dominant strain of race theory, which has been inculcated throughout the culture and in school textbooks that restricted and repressed African Americans and other minorities, even as Northerners blamed the South for its legacy of slavery, segregation, and racial injustice. A major assessment of how we got to where we are today, of how white supremacy has suffused every area of American learning, from literature and science to religion, medicine, and law, and why this kind of thinking has so insidiously endured for more than three centuries.

Teaching White Supremacy

"Focuses on networks of people, information, conveyances, and other resources and technologies that moved slave-based products from suppliers to buyers and users." (page 3) The book examines the credit and financial systems that grew up around trade in slaves and products made by slaves.

The Business of Slavery and the Rise of American Capitalism, 1815-1860

Winner of the Los Angeles Times Book Prize in History A bold and searing investigation into the role of white women in the American slave economy "Compelling."—Renee Graham, Boston Globe "Stunning."—Rebecca Onion, Slate "Makes a vital contribution to our understanding of our past and present."—Parul Sehgal, New York Times Bridging women's history, the history of the South, and African American history, this book makes a bold argument about the role of white women in American slavery. Historian Stephanie E. Jones-Rogers draws on a variety of sources to show that slave owning women were sophisticated economic actors who directly engaged in and benefited from the South's slave market. Because women typically inherited more slaves than land, enslaved people were often their primary source of wealth. Not only did white women often refuse to cede ownership of their slaves to their husbands, they employed management techniques that were as effective and brutal as those used by slave owning men. White women actively participated in the slave market, profited from it, and used it for economic and social empowerment. By examining the economically entangled lives of enslaved people and slave owning women, Jones-Rogers presents a narrative that forces us to rethink the economics and social conventions of slaveholding America.

They Were Her Property

NEW YORK TIMES BESTSELLER From acclaimed columnist and political commentator Michael Harriot, a searingly smart and biting hilarious retelling of American history that corrects the record and showcases the perspectives and experiences of Black Americans. America's backstory is a white-washed mythology implanted in our collective memory. It is the story of the pilgrims on the Mayflower building a new nation. It is George Washington's cherry tree and Abraham Lincoln's log cabin. It is the fantastic tale of slaves that spontaneously teleported themselves here with nothing but strong backs and negro spirituals. It is a sugarcoated legend based on an almost true story. It should come as no surprise that the dominant narrative of American history is blighted with errors and oversights—after all, history books were written by white men with their perspectives at the forefront. It could even be said that the devaluation and erasure of the Black experience is as American as apple pie. In *Black AF History*, Michael Harriot presents a more accurate version of American history. Combining unapologetically provocative storytelling with meticulous research based on primary sources as well as the work of pioneering Black historians, scholars, and journalists, Harriot removes the white sugarcoating from the American story, placing Black people squarely at the center. With incisive wit, Harriot speaks hilarious truth to oppressive power, subverting conventional historical narratives with little-known stories about the experiences of Black Americans. From the African Americans who arrived before 1619 to the unenslavable bandit who inspired America's first police force, this long overdue corrective provides a revealing look into our past that is as urgent as it is necessary. For too long, we have refused to acknowledge that American history is white history. Not this one. This history is Black AF.

Black AF History

"Provides information about the history and celebration of more than 100 holidays, festivals, and other events observed by Americans of African descent. Features include narrative overviews, chronology of

historical events related to holidays and festivals, calendar and geographical listings of observances, bibliography, and contact information and web sites"--Provided by publisher.

African-American Holidays, Festivals, and Celebrations

This sweeping and groundbreaking work presents the shocking and violent history of ethnic cleansing against Chinese Americans from the Gold Rush era to the turn of the century.

Driven Out

Offers an innovative plan to eliminate inequalities in American health care and save the lives they endanger Over 84,000 black and brown lives are needlessly lost each year due to health disparities: the unfair, unjust, and avoidable differences between the quality and quantity of health care provided to Americans who are members of racial and ethnic minorities and care provided to whites. Health disparities have remained stubbornly entrenched in the American health care system—and in *Just Medicine* Dayna Bowen Matthew finds that they principally arise from unconscious racial and ethnic biases held by physicians, institutional providers, and their patients. Implicit bias is the single most important determinant of health and health care disparities. Because we have missed this fact, the money we spend on training providers to become culturally competent, expanding wellness education programs and community health centers, and even expanding access to health insurance will have only a modest effect on reducing health disparities. We will continue to utterly fail in the effort to eradicate health disparities unless we enact strong, evidence-based legal remedies that accurately address implicit and unintentional forms of discrimination, to replace the weak, tepid, and largely irrelevant legal remedies currently available. Our continued failure to fashion an effective response that purges the effects of implicit bias from American health care, Matthew argues, is unjust and morally untenable. In this book, she unites medical, neuroscience, psychology, and sociology research on implicit bias and health disparities with her own expertise in civil rights and constitutional law. In a time when the health of the entire nation is at risk, it is essential to confront the issues keeping the health care system from providing equal treatment to all.

Just Medicine

In *Film Blackness* Michael Boyce Gillespie shifts the ways we think about black film, treating it not as a category, a genre, or strictly a representation of the black experience but as a visual negotiation between film as art and the discursivity of race. Gillespie challenges expectations that black film can or should represent the reality of black life or provide answers to social problems. Instead, he frames black film alongside literature, music, art, photography, and new media, treating it as an interdisciplinary form that enacts black visual and expressive culture. Gillespie discusses the racial grotesque in Ralph Bakshi's *Coonskin* (1975), black performativity in Wendell B. Harris Jr.'s *Chameleon Street* (1989), blackness and noir in Bill Duke's *Deep Cover* (1992), and how place and desire impact blackness in Barry Jenkins's *Medicine for Melancholy* (2008). Considering how each film represents a distinct conception of the relationship between race and cinema, Gillespie recasts the idea of black film and poses new paradigms for genre, narrative, aesthetics, historiography, and intertextuality.

Film Blackness

In June 1975 Prime Minister Indira Gandhi imposed a 'State of Emergency', resulting in a 21-month suspension of democracy. Jaffrelot and Anil explore this black page in India's history, a constitutional dictatorship of unequal impact, with South India largely spared thanks to the resilience of Indian federalism. India's First Dictatorship focuses on Mrs Gandhi and her son, Sanjay, who was largely responsible for the mass sterilisation programmes and deportation of urban slum-dwellers. However, it equally exposes the facilitation of authoritarian rule by Congressmen, Communists, trade unions, businessmen and the urban middle class, as well as the complacency of the judiciary and media. While opposition leaders eventually closed ranks in jail, many of them collaborated with the new regime—including the RSS. Those who resisted the Emergency, in the media or on the streets, were few in number. This episode was an acid test for India's political culture. While a tiny minority of citizens fought for democracy during the Emergency, in large numbers the people bowed to a strong woman, even worshipped her. Equally importantly, Hindu nationalists were endowed with a new legitimacy. The Emergency was not a parenthesis, but a turning point; its legacy is very much alive today.

India's First Dictatorship

Becoming Free in the Cotton South challenges our most basic ideas about slavery and freedom in America. Instead of seeing emancipation as the beginning or the ending of the story, as most histories do, Susan Eva O'Donovan explores the perilous transition between these two conditions, offering a unique vision of both the enormous changes and the profound continuities in black life before and after the Civil War. This boldly argued work focuses on a small place—the southwest corner of Georgia—in order to explicate a big question: how did black men and black women's experiences in slavery shape their lives in freedom? The reality of slavery's demise is harsh: in this land where cotton was king, the promise of Reconstruction passed quickly, even as radicalism crested and swept the rest of the South. Ultimately, the lives former slaves made for themselves were conditioned and often constrained by what they had endured in bondage. O'Donovan's significant scholarship does not diminish the heroic efforts of black Americans to make their world anew; rather, it offers troubling but necessary insight into the astounding challenges they faced. *Becoming Free in the Cotton South* is a moving and intimate narrative, drawing upon a multiplicity of sources and individual stories to provide new understanding of the forces that shaped both slavery and freedom, and of the generation of African Americans who tackled the passage that lay between.

Becoming Free in the Cotton South

As many as four million Americans suffer from the hepatitis C virus (HCV), but most don't even know they're infected. Here at last is the unprecedented book that smashes the myths about the disease as it offers authoritative, lifesaving information you won't find anywhere else. *Living Healthy with Hepatitis C* is your ultimate weapon against the biggest killer of all: fear. Discover new hope and help in its pages as you learn a comprehensive approach that puts you back in control of your life! Protect yourself from acquiring HCV Protect your loved ones from contracting it if you are infected Benefit from the latest medical treatments, including interferon, ribavirin, and other drugs Learn the pros and cons of alternative treatments, including herbs, supplements, and acupuncture Use diet, lifestyle, and exercise as potent weapons against HCV Avoid its worst consequences, including cancer and liver failure Understand HCV, the medical treatments, lab tests, clinical trials, and much more Take advantage of the latest breakthroughs, including a possible "magic bullet" leading to a cure PLUS extensive resources, including books, organizations, websites, periodicals, and more

Living Healthy with Hepatitis C

Students who study business in university are not likely to hear about or discuss examples of Indigenous business successes from across the country. Rarely would one see references to Aboriginal communities, let alone examples of them growing multi-million dollar businesses and partnering to lead innovative economic development projects that positively impact the national economy. Resources are scarce and inadequate, an oversight that is to our detriment. Somewhere between a textbook and a book of collected essays, this collection of articles is an effort to build on and share the research of Aboriginal practitioners and scholars working in their respective fields. Where possible we share not only concepts, but also the voices of Aboriginal leaders, officials, Elders and other members of Aboriginal communities. *Indigenous Business in Canada* addresses contemporary concerns and issues in the doing of Indigenous business in Canada, reveals some of the challenges and diverse approaches to business in Aboriginal contexts from coast to coast to coast, and demonstrates the direct impact that history and policy, past and present, have on business and business education.

Indigenous Business in Canada

Practical and inspiring, this field-leading book helps students learn how to navigate encounters with death, dying, and bereavement. The authors integrate classical and contemporary material, present task-based approaches for individual and family coping, and include four substantial chapters devoted to death-related issues faced by children, adolescents, young and middle-aged adults, and older adults. The book discusses a variety of cultural and religious perspectives that affect people's understanding and practices associated with such encounters. Practical guidelines for constructive communication are designed to encourage productive living in the face of death. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Death & Dying, Life & Living

The reimagined story of Anarcha, an enslaved Black woman, subjected to medical experiments by Dr. Marion Sims. Selected by Tyehimba Jess as a National Poetry Series winner. In this provocative collection by award-winning poet and artist Dominique Christina, the historical life of Anarcha is personally reenvisioned. Anarcha was an enslaved Black woman who endured experimentation and torture at the hands of Dr. Marion Sims, more commonly known as the father of modern gynecology. Christina enables Anarcha to tell her story without being relegated to the margins of history, as a footnote to Dr. Sims's life. These poems are a reckoning, a resurrection, and a proper way to remember Anarcha . . . and grieve her.
