Contabilidad de costos

The globalization of media industries that began during the 1980s and 1990s occurred at the same time as the establishment of or return to democratic forms of government in many Latin American countries. In this volume of specially commissioned essays, thirteen well-known media experts examine how the intersection of globalization and democratization has transformed media systems and policies throughout Latin America. Following an extensive overview by editors Elizabeth Fox and Silvio Waisbord, the contributors investigate the interaction of local politics and global media in individual Latin American countries. Some of the issues they discuss include the privatization and liberalization of the media, the rise of media conglomerates, the impact of trade agreements on media industries, the role of the state, the mediatization of politics, the state of public television, and the role of domestic and global forces. The contributors address these topics with a variety of theoretical approaches, combining institutional, historical, economic, and legal perspectives.

High speed rail (HSR) is being touted as a strategic investment for connecting people across regions, while also fostering prosperity and smart urban growth. However, as its popularity increases, its implementation has become contentious with various parties contesting the validity of socioeconomic and environmental objectives put forward as justification for investment. High Speed Rail and Sustainability explores the environmental, economic and social effects of developing a HSR system, presenting new evaluations of the proposed system in California in the US as well as lessons from international experience. Drawing upon the accumulated experience from past HSR system development around the world, leading experts present a diverse set of perspectives as well as diverse contexts of implementation. Assessments of the California case as well as cases from Japan, France, Germany, Italy, Spain, Taiwan, China, and the UK show how governments and stakeholders have bridged the gap between the vision and the realities of connecting metropolitan regions through HSR. This is a valuable resource for academics, researchers and policy-makers in the areas of urban planning, civil engineering, transportation and environmental design.

Make the right decisions with Horngren/Sundem/Stratton! Horngren/Sundem/Stratton's best-selling texts emphasize decision-making throughout each chapter. Decision-making is introduced in the early text chapters and also appears in many of the text features: "Making Managerial Decisions" boxes, critical thinking exercises, and more. As always, students develop a solid understanding of costs and cost behavior and the use of cost information for planning and control decisions, not just inventory valuation. Two text versions enable faculty to select a text that only covers management accounting concepts (Chs. 1-14) or one that includes three chapters of financial accounting review (Chs. 1-17). New OneKey provides the convenience of having all text resources in a single location and available in your choice of course management platform: BlackBoard, WebCT, and CourseCompass. OneKey also includes PH Grade Assist on-line homework with automatic grading and infinite practice for students).

In recent years, in both the specialist press and the tabloids, the idea of privatization of social security has become a shimmering catch phrase. Politicians base election campaigns on promises of more or less privatization in social security. Many governments introduce private business management methods into their social security systems. Representatives of social security institutions and academics prepare theory papers on the possible outcomes of privatization. And international financial organizations describe doomsday scenarios based on the premise of failure to privatize. What is the role of privatization today in the development of national social security systems? How does privatization concern the developments in different social security programs such as old age, sickness, unemployment, accident insurance and family allowances? What are the visions and effects of privatization in social security? This volume provides an overview of the various positions of supporters and opponents of privatization in the main branches of social security, followed by national experience of privatized or part-privatized social security systems. While the perspective of each of the contributors is markedly different, the overall objective cuts across differences: namely, to develop the most efficient and cost-effective system of social security protection. The authors' views and knowledge are derived from their firsthand experiences with social security in Africa, Asia, the Americas and Europe. Representatives of the leading international organizations dealing with social security issues-the International Labour Organization, the OECD, the World Bank and the World Health Organization-further expand the parameters of the viewpoints and experiences expressed. This multifaceted book allows the reader to learn about the challenge of privatization in the various forms of social security by assembling a set of highly up-to-date, technically complex and legal issues based on practical analysis and actual experience. It will be of interest to those concerned with national social policy in a comparative context.

This is the sixth volume in an ongoing series that aims to review social security in a comparative, global context. Xenia Scheil-Adlung is program manager, International Social Security Association, Geneva, Switzerland.

Cost Management: Accounting and Control emphasizes that changing conditions often require a change in cost management systems. Emphasizing this point stresses the dynamic and exciting nature of the field. By taking a systems approach -- one that first covers functional-based cost and control and then activity-based cost systems -- students understand how to understand and manage any cost management system.

The book explains why and when laws go unenforced in developing countries. It argues that the tolerance of street vending and squatting is a form of informal welfare provision and a more effective means to mobilize the poor than conventional state social policies.

This study comprises a review of oil palm development and management across landscapes in the tropics. Seven countries have been selected for detailed analysis using surveys of the current literature, mainly spanning the last fifteen years. Indonesia and Malaysia are the obvious leaders in terms of area planted and levels of production and export, but also in literature generated on social and environmental challenges. In Latin America, Colombia is the dominant producer with oil palm expanding in disparate landscapes with a strong focus on palm oil-based biodiesel; and small-scale growers and companies in Peru and Brazil offer contrasting ways of inserting oil palm into the Amazon. Nigeria and Cameroon represent African nations with traditional groves and old plantations in which foreign 'land grabs' to establish new oil palm have recently occurred.

Latin Politics, Global Media

The debate on the future of the aviation sector and the viability of its traditional business practices is the core of this book. The liberalization of the EU market in the 1990s has radically modified the competitive environment and the nature of airline competition. Furthermore, the new millennium began with terrorist attacks, epidemics, trade globalization, and the rise of oil prices, all of which combined to push the industry into a "perfect storm". Airline industry profitability has been an elusive goal for several decades and the recent events has only accentuated existing weaknesses. The main concern of industry observers is whether the airline business model, successful during the 1980s and 1990s, is now sustainable in a market crowded by low-cost carriers. The airlines that will respond rapidly and determinedly to increase pressure to restructure, consolidate and segment the industry will achieve competitive advantages. In this context, the present study aims to model the new conduct of the 'legacy' carriers in a new liberalized European market in terms of network and pricing competition with low-cost carriers and competitive reaction to the global economic crises.

High-Speed Rail and Sustainability

Human dignity, the ability to establish a sense of self-worth and self-respect and to enjoy the respect of others, is necessary for a fully realized life. Working with dignity is a fundamental part of achieving a life well-lived, yet the workplace often poses challenging obstacles because of mismanagement or managerial abuse. Defending dignity and realizing self-respect through work are key to workers' well-being; insuring the dignity of employees is equally important for organizations as they attempt to make effective use of their human capital. In this book Randy Hodson, a sociologist of work and organizational behavior, applies ethnographic and statistical approaches to this topic, offering both a richly detailed, inside look at real examples of dignity in action, and a broader analysis of the pivotal role of dignity at work.

Introduction to Management Accounting, Chap. 1-14

Empirical analysis of two decades of pioneering pension and social security reform in Latin America and the Caribbean shows that much has been achieved, but that critical challenges remain. In tackling this unfinished agenda, a great deal can be learned from the reform experience of countries in the region. 'Keeping the Promise,' produced by the chief economist's office for the Latin America and Caribbean region at the World Bank, evaluates policy reforms in 12 countries, points to successes and shortcomings, and proposes priorities and options for future reform.

Pemex

Originally published in 1991, Robert Klitgaard's classic book addresses questions of enduring relevance in a lively and insightful way. Bribes, tribes, and markets that fail--these are the realities in many developing countries. The usual strategies for reform--be they capitalist or socialist--have failed to address them effectively. What is to be done when economic reforms leave the poor behind or when new constitutions and elections are undercut by inefficient bureaucracies, overcentralization, and corruption? And what to do about persistent ethnic inequalities within developing countries? The book provides inspiring examples from around the world, as well as analytical frameworks to guide inclusive policy discussion. Theorists will enjoy the novel uses of industrial economics, the theory of the firm, and the economics of discrimination. The book highlights overlooked causes of underdevelopment: imperfect information and weak information processing in individuals and institutions. In the preface, the former President of Panama, Dr. Nicolás Ardito Barletta, writes: "Poverty, Klitgaard argues, is--and should be--a principal concern of development strategists, but policy makers and analysts will continue to run from pillar to post in their search for a cure unless they can adjust their development schemes to reality..." "The new approach that the author proposes is based on two fundamental principles. One is that the proper choice of economic strategies cannot be determined in the abstract but depends on particular circumstances... The other is that information is at the heart of problems in the real world of the developing countries... Klitgaard offers examples from Bolivia, Brazil, India, Indonesia, Malaysia, Pakistan, Peru, and the Philippines to make his point. "The author suggests creative ways in which the state and citizens themselves can solve their own 'inevitably unique problems.' One of the key tasks, in Klitgaard's view, is to ensure that environments are rich in information. This volume offers a broad framework for policy analysis that moves us closer to intelligent solutions to the real problems of the real poor in the modern world."

Building Social Security

"The applied research indicates that, to improve awareness, park education programs should be targeted specifically to the user groups primarily through outreach programs. Further, the Park's management programs should be highlighted, particularly the beneficial, tangible products and services (benefits) the Park provides to each user group... The closer the tie between reef conditions and business earnings, the greater the users' support for reef conservation." Coral reefs are sometimes referred to as "canaries of the sea" because of their early warning ability to show near-shore oceanic stress. Because of their biological diversity, they are also called "rainforests of the sea." Coral reefs are vital to the well being of millions of people. Coral reef managers and government officials trying to save their valuable national resources have turned to research on coral reefs for help. The research presented in this publication merits a great deal of notice because the output is useful for decision support and training tools in integrated coastal zone management (ICZM). The work on cost-effectiveness analysis has developed integrated economic and ecological models, relying extensively on fuzzy logic procedures to model impacts and effects of interventions within the reef environment. By contrast, the marine system valuation work provides economic valuations of coral reefs, demonstrating the use of different modeling

methods and treating key policy issues within this context. This publication will interest coastal zone experts and managers worldwide

Boletín de documentación latinoamericana

A leading figure in cultural studies worldwide, Néstor García Canclini is a Latin American thinker who has consistently sought to understand the impact of globalization on the relations between Latin America, Europe, and the United States, and among Latin American countries. In this book, newly available in English, he considers how globalization is imagined by artists, academics, migrants, and entrepreneurs, all of whom traverse boundaries and, at times, engage in conflicted or negotiated multicultural interactions. García Canclini contrasts the imaginaries of previous migrants to the Americas with those who live in transnational circuits today. He integrates metaphor and narrative, working through philosophical, anthropological, and socioeconomically grounded interpretations of art, literature, crafts, media, and other forms of expression toward his conclusion that globalization is, in important ways, a collection of heterogeneous narratives. García Canclini advocates global imaginaries that generate new strategies for dealing with contingency and produce new forms of citizenship oriented toward multiple social configurations rather than homogenization. This edition of *Imagined Globalization* includes a significant new introduction by George Yúdice and an interview in which the cultural theorist Toby Miller and García Canclini touch on events including the Arab Spring and Occupy Wall Street.
