

Aldol Condensation Synthesis Of Dibenzalacetone

[#Aldol Condensation](#) [#Dibenzalacetone Synthesis](#) [#Organic Chemistry Experiment](#) [#Alpha Beta Unsaturated Ketone](#) [#Carbon Carbon Bond Formation](#)

Explore the fascinating process of Dibenzalacetone synthesis through an Aldol Condensation reaction. This common organic chemistry experiment demonstrates crucial carbon-carbon bond formation, yielding an important α,β -unsaturated ketone with practical applications in UV filters and as a ligand in catalysis.

Every entry in this library is linked to original verified sources.

We appreciate your visit to our website.

The document Aldol Condensation Dibenzalacetone is available for download right away. There are no fees, as we want to share it freely.

Authenticity is our top priority.

Every document is reviewed to ensure it is original.

This guarantees that you receive trusted resources.

We hope this document supports your work or study.

We look forward to welcoming you back again.

Thank you for using our service.

Across digital archives and online libraries, this document is highly demanded.

You are lucky to access it directly from our collection.

Enjoy the full version Aldol Condensation Dibenzalacetone, available at no cost.

Aldol Condensation Synthesis Of Dibenzalacetone

It can be considered as a specific variation of the aldol condensation. This reaction is named after two of its pioneering investigators Rainer Ludwig Claisen... 3 KB (313 words) - 00:27, 23 May 2023

The aldehyde ...

pour the propanal into a 50 milliliter round bottom flask

attach the flask with propanol in it to the distillation apparatus

turn on the cooling water

see the vapor climbing up inside the apparatus touching the thermometer

keep an eye on the temperature during the distillation

remove the heating mantle

measure the volume of the distillate

measuring out two molar aqueous sodium hydroxide

pour that sodium hydroxide solution

add the propane through the top of the condenser

take it off of the reflux apparatus and pour

draining the aqueous layer out the bottom of the separatory funnel

pour the upper product containing layer into a round bottom flask

distilling the products off

keep an eye on the temperature of the vapor during the distillation

reduce the amount of heat by dialing back the variable transformer

make a thin layer in the bottom of the flask

filter that material into a 25 milliliter round bottom flask

purify the dehydration product

lowering the heating mantle

put that on the ir spectrometer

prepare a sample for proton nmr analysis by syringing
