Aphasia and Related Neurogenic Language Disorders

Aphasia and Related Neurogenic Language Disorders Rapid advances in neural imaging, particularly in regard to neural plasticity and brain changes, have resulted in an evolving neurorehabilitation paradigm for aphasia and related language disorders. Aphasia and Related Neurogenic Language Disorders has been adopted worldwide as a text for aphasia courses. This new 5th edition by Leonard LaPointe and Julie Stierwalt encompasses state-of-the-art concepts and approaches from an impressive cadre of experts who work in research labs, classrooms, clinics, and hospitals-including the world-renowned Mayo Clinic. As in previous editions, this book embraces a humanistic approach to treatment, addressing multicultural and multilinguistic considerations and social model interventions. The text encompasses a full continuum of cognitive-language disorder management-from everyday practicalities, assessment, and treatment to disorder-specific cases with evidence-based data. Additions to the 5th edition include chapters on pragmatics and discourse, telepractice, digital and electronic advances, funding and reimbursement, and comprehension, syntax, and linguistic based disorders. Key Features: A new chapter on neuroanatomical basics features exquisite illustrations An in-depth look at neurogenic communication disorders from Mayo Clinic provides firsthand insights on treating patients in an acute care hospital setting Discussion and test questions, case studies, and clinical pearls offer invaluable didactic guidance A chapter on expanded traumatic brain injury covers blast injuries and multisystem injuries This is the most comprehensive yet concise resource on aphasia and related disorders available today. New legions of speech language pathology students, residents, course directors, and practitioners will discover a remarkable guide on the treatment of communication disorders.

First Term at Malory Towers

DigiCat Publishing presents to you this special edition of "First Term at Malory Towers" by Enid Blyton. DigiCat Publishing considers every written word to be a legacy of humankind. Every DigiCat book has been carefully reproduced for republishing in a new modern format. The books are available in print, as well as ebooks. DigiCat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature.

The Letters of St. Jerome

No other source gives such an intimate portrait of this brilliant and strong minded individual, one of the four great doctors of the West and generally regarded as the most learned of the Latin fathers.

The Origin of Medical Terms

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

A Labour of Love

What are the realities of 'community care' – the unpaid care given by hundreds of thousands of women, often in their own homes – for children and adults who are handicapped or chronically sick, or for frail elderly people? Originally published in 1983, this book explores the experiences of such women and the dilemmas which 'caring' poses for them. At a time when most women needed to earn money from a paid job, how did 'carers' manage to juggle their caring and other domestic responsibilities, and what happened if they had to give up work? Against a background of government policies which favour care 'by' the community, the contributors to this book raise crucial issues for social and economic policy. Hilary Graham examines what caring really means and Clare Ungerson asks why women do it. Sally Baldwin and Caroline Glendinning focus on mothers with handicapped children and Fay Wright on single adults with elderly dependants. Alan Walker highlights the dependencies implicit in caring relationships with the elderly. Lesley Rimmer looks at the economic 'costs' of care, and Dulcie Groves and Janet Finch examine the invalid care allowance – a carers' benefit for which married women can never qualify. In exploring the domestic sector of welfare, *A Labour of Love* was a highly topical contribution to the debate both on welfare provision and on the division of labour between men and women at the time.

Essentials of Bedside Cardiology

Essentials of Bedside Cardiology, Second Edition, like the first edition, is designed for those who wish to balance technological advances with increased personal skill in history taking and physical examination. It is important to teach physicians that all technologies now in use for diagnosing cardiovascular disorders, such as echocardiography, can have false positive and false negative results. It is not always wise to rely on these technologies alone; indeed, they may not even be available in some settings. Even when the full panoply of up-to-date techniques is at the physician's disposal, the patient may not be a good candidate for an echocardiogram, or the technician or reader may not be well qualified, or the equipment itself may be substandard. Technology must be combined with physical examination to decide what is true and what is false. The practice of expert history taking and physical examination returns the physician to the actual patient, where the physician can feel like a "real doctor" rather than a mere interpreter of laboratory data. *Essentials of Bedside Cardiology*, Second Edition, strives to teach and not simply to tell the facts, relying on three basic methods derived from the psychology of teaching and learning: 1. Explain the facts. 2. Use a question and answer format-the Socratic method. 3. Provide tricks or mnemonics to help the reader remember the facts.

Stroke Units

Based on a major systematic review from international centres this concise text discusses the benefits of managing stroke patients in specialised units compared to management outside the hospital. It provides invaluable information in the most effective management for this chronically disabled sector

Understanding Suicide

In this book international experts address a range of key current issues relating to suicide. The opening chapters discuss nosology, definitions, clinical determinants, and conceptual models of the suicide process and consider the evidence regarding potential biomarkers of suicide risk based on neuroscientific research. Adopting a neo-Durkheimian perspective, the role of various social factors in the genesis of suicidal behavior is then explored in depth. Practical user-friendly tools that facilitate risk assessment by clinicians are provided, and detailed consideration is given to efficient and innovative strategies for the prevention of suicide and the treatment of suicidal behavior, such as psychotherapy, psychopharmacological approaches, and effective organization of care, including surveillance and the

use of online tools. The final part of the book focuses on the need for and development of a personalized approach within the field of suicide prevention.

First Aid for Children Fast

Describes emergency treatment for childhood injuries and illnesses, and offers advice on accident prevention.

Angel in the Rubble

The story of the last survivor pulled from the 9/11 Ground Zero debris after 27 hours and her journey from desperation to a miraculous salvation.

Stress Response Syndromes

In this revised and expanded second edition, Dr. Horowitz places special emphasis on treatment. The chapters on diagnosis, theory and therapeutic technique have been extensively revised. In ten years since the publication of the first edition, Dr. Horowitz has continued to direct the Centre for the Study of Neurosis at the Langley Porter Psychiatric Institute of the University of California, placing particular emphasis on psychotherapy of stress response syndromes. This clinical work has provided the background for a greatly expanded discussion of treatment technique and a new chapter on therapeutics of stress response syndromes. Mental health professional who want to be effective with patients experiencing the stress of bereavement, traumatic accident, medical illness or other life events should find this book a useful guide.

Adult Emergency Nursing Procedures

Intended as a working manual, with chapters following a uniform format for ease of use. Assumes basic nursing knowledge, e.g. history-taking, aseptic techniques, documentation. For each procedure, describes indications, contraindications and cautions, equipment, patient preparation, procedural steps

Zig Zag

While studying advanced physics at a prestigious European university, Elisa Robledo was invited to join a select research team on a secret project to manipulate String Theory. It was the opportunity of a lifetime for the eager young scientist—the chance to actually view monumental events from the far distant past: dinosaurs roaming the Earth, life during the Stone Age, the crucifixion of Christ. But on a remote island in the Indian Ocean, the team's experiments went horribly awry . . . and something terrible was awakened. Now, years later, Elisa's former colleagues are dying, one by one. The nightmare they created by meddling with Time is taking a shocking and gruesome toll. And only by uncovering the sinister truth behind the science can Elisa hope to survive the dark, devouring forces that mean to destroy her and the world she knows.

Community Psychology

'Medical Genetics' offers up-to-date information on modern genetics. This comprehensive study includes the latest findings from genetic research and how that knowledge can be used in clinical practice.

Posttraumatic Stress Intervention

The updated Third Edition of Rubin and Farber's Pathology retains the features that make this text a favorite in medical schools--contemporary coverage, distinguished contributing authors, student-friendly format, and hundreds of full-color photomicrographs, color drawings, and colorful charts and other graphics throughout. The Third Edition's highlights include 300 new full-color photomicrographs, completely updated graphics throughout, and major revisions to chapters on developmental and genetic diseases, immunopathology, neoplasia, blood vessels, and infectious and parasitic diseases. The text provides students with the foundations of general and systemic pathology for a solid understanding of pathogenesis and how it relates to clinical medicine. A consistent, orderly presentation of each disease--definition, epidemiology, pathogenesis, pathology, clinical features--helps focus the student's attention and makes key facts easier to remember. Bullets and boldface type are strategically used to highlight important points.

World Disasters Report

A balanced critical review of psychological debriefing by an eminent international team, published in 2000.

Medical Genetics

"This book will last and last, because it contains the wisdom of two wonderfully knowing observers of our human destiny."—Robert Coles For decades Erik H. Erikson's concept of the stages of human development has deeply influenced the field of contemporary psychology. Here, with new material by Joan M. Erikson, is an expanded edition of his final work. *The Life Cycle Completed* eloquently closes the circle of Erikson's theories, outlining the unique rewards and challenges—for both individuals and society—of very old age.

Psychological Debriefing

Less than twenty years ago the field of mental health did not have the language to describe the long-term consequences of traumatic stress. In the absence of specific biological markers, the psychological symptoms of trauma survivors were often attributed to neurotic or even psychotic disorders. But in 1980, after more than a century of clinical observations, post-traumatic stress disorder (PTSD) was recognized as a diagnosis. By the 1990s, biological findings began to provide objective validation that PTSD is more than a politically or socially motivated conceptualization of human suffering. This volume summarizes the latest findings in this rapidly changing field, including the biological differences between PTSD, stress, and other psychiatric disorders. Chief among the findings is that PTSD is a different disorder than was originally thought, and that the biology of PTSD is not simply the biology of stress. Topics include the empirical basis for post-traumatic stress disorder; psychobiological findings; neurodevelopmental effects of trauma; neurological basis of traumatic and non-traumatic memory impairment in post-traumatic stress disorder; how basic research informs clinical observations; and the psychobiology of treatment.

The Life Cycle Completed (Extended Version)

Thrombolytic therapy is finally starting to reach patients in a variety of settings all over the world. Formerly in the domain of sub-specialists, thrombolytic therapy now rests in the realm of Emergency Medicine, Intensive Care, Vascular, and Neuro hospital Medicine physicians. Increasingly, non-neurologists use thrombolytic therapy. This is a significant advancement since the 2nd edition to *Thrombolytic Therapy for Acute Stroke* published, creating a significant need for a 3rd edition. *Thrombolytic Therapy for Acute Stroke*, 3rd edition will be a practical and thorough reference to all those caring for acute stroke patients. Extensively updated from previous editions, new data and cases will provide guidance to this most effective stroke treatment. This text will be of great interest to physicians, residents and advanced practice nurses who treat acute stroke patients.

Peasant Society in the Colombian Andes

This book examines factors surrounding the partnership between school-based training and mentoring in Physical Education. Contributors look at all angles of the collaboration between schools and higher education institutions, including: How mentor training programs are planned and the issues involved
*Trainees' experiences of school-based training and mentoring
*The needs of PE mentors in schools
*A full explanation of mentoring
Drawing on recent findings and the views of physical education teachers

in the UK, Australia and the USA, the editor combines a wealth of information on factors which influence mentorship and the effectiveness of school-based partnership schemes.

Psychobiology of Posttraumatic Stress Disorder

The rapid advances made in genetic research and technology over the last few decades have led to a host of important discoveries that have allowed for the detection (and hopefully soon the treatment) of a number of genetic conditions and diseases. Not surprisingly, these advances have also raised numerous ethical concerns about how resulting technologies will be implemented, and the impact they will have on different communities. One particular concern is the enormous costs involved in conducting genetic research and the fact that the private sector has become heavily involved; the desire to commercialize the results and technology derived from genetic research is considered problematic. In September 1998, the Second International Conference on DNA Sampling, titled "The Commercialization of Genetic Research: Ethical, Legal and Policy Issues," was held at the conference, and of this book, was to in Edmonton, Alberta, Canada. The goal facilitate an interdisciplinary discussion of the legal, ethical, and policy implications arising from the commercialization of genetic research. We solicited contributions for the book from authors in fields as diverse as ethics, law, medicine, health policy, and the social sciences. The papers included, while based on presentations given at the conference, have been substantially expanded and enhanced by the commentary received and discussions held at the conference.

Thrombolytic Therapy for Acute Stroke

As a result of the growing amount of acute crisis events portrayed in the media that impact the lives of the general public, interest in crisis intervention, response teams, management, and stabilization has grown tremendously in the past decade. However, there exists little to no literature designed to give timely and comprehensive help for crisis intervention teams. This is a thorough revision of the first complete and authoritative handbook that prepares the crisis counselor for rapid assessment and timely crisis intervention in the 21st century. Expanded and fully updated, the Crisis Intervention Handbook: Assessment, Treatment, and Research, Third Edition focuses on crisis intervention services for persons who are victims of natural disasters, school-based and home-based violence, violent crimes, and personal or family crises. It applies a unifying model of crisis intervention, making it appropriate for front-line crisis workers-clinical psychologists, social workers, psychiatric-mental health nurses, and graduate students who need to know the latest steps and methods for intervening effectively with persons in acute crisis.

Mentoring in Physical Education

The entire emergency room team-physicians, surgeons, intensivists, anesthesiologists and nurses-are here brought together to contribute their expertise on trauma resuscitation. The reader will learn not only how each of these specialists focus on trauma, but also how those different skills are capitalized for the good of the patient. This second edition of Trauma Resuscitation includes comprehensive profiles of all types of trauma. The book is practical and has clinically relevant text that is supported by tables, flow charts and graphics. Each section presents the topic clearly and concisely, allowing readers to locate the information quickly. Every member of the emergency room team, including those in training, will benefit from this volume.

The Commercialization of Genetic Research

Studies in housing have often concentrated on an abstract institutionalised approach isolated from the broader base of the social sciences. This book is the first to treat housing as a subject of social theory. It provides a critique of current research and theorises housing in relation to political science, social change and welfare developing a case study to illustrate these applications. By being sometimes controversial, this book will stimulate debate among housing theorists and sociologists alike. The Author is currently Senior Research fellow at the Swedish Institute for Building Research and Docent in Sociology at Uppsala University. He has written widely on Housing, Urban Studies and Sociology and his books include THE MYTH OF HOME OWNERSHIP and THE GREAT AUSTRALIAN NIGHTMARE.

Tratado de trasplantes de órganos

The idea that reading literature changes the reader seems as old as literature itself. Through the ages philosophers, writers, and literary scholars have suggested it affects norms, empathic ability, self-concept, beliefs, etc. This book examines what we actually know about these effects. And it finds strong evidence for the old claims. However, it remains unclear what aspects of the reading experience are responsible for these effects. Applying methods of the social sciences to this particular problem of literary theory, this book presents a psychological explanation based upon the conception of literature as a moral laboratory. A series of experiments examines whether imagining oneself in the shoes of characters affects beliefs about what it must be like to be someone else, and whether it affects beliefs about consequences of behavior. The results have implications for the role literature could play in society, for instance, in an alternative for traditional moral education.

Cambio 16

Stroke Nursing is the leading guide for optimal stroke care, facilitating the provision of evidence-based practice across the stroke journey, and covering the sixteen elements of care outlined in the UK's Stroke-Specific Education Framework (SSEF). Drawing from years of clinical and research experience, the authors provide practical guidance on the essential areas of stroke nursing, including stroke classification, stabilisation, thrombolysis and thrombectomy, rehabilitation and recovery, nutrition and oral care, palliative and long-term care, physical impairment management, and more. Now in its second edition, this indispensable guide helps practitioners expand their knowledge, skills and competence in all areas of stroke nursing services. Adopts a practical and evidence-based approach to stroke management, exploring UK and international perspectives Authored by expert clinicians and leaders in the field of nursing practice, research and education Includes updated case studies and practice examples, expanded coverage of clinical application in practice, and new discussions of the knowledge and skills required by nurses Stroke Nursing is essential reading for students of nursing and neuroscience, and is the definitive reference for practicing nurses and healthcare professionals caring for stroke patients.

Crisis Intervention Handbook

This book presents a unique collection of clinical cases to help combat the difficulty of diagnosis and treatment of Syncope. Medical professionals using this book are provided with a reference to a large array of succinctly described and illustrated clinical scenarios. Each case is presented with the results of appropriate tests and critical comments about the evaluation, diagnosis and treatment according to guidelines. Syncope is considered a difficult diagnostic and treatment problem for all who work in the field. Regardless of your prior knowledge, you will find the case studies easy to digest, enlightening, and immediately pertinent to improving the care patients – giving you confidence in your diagnosis and your advice. The editors have developed a lively and easy-to-read book with a focused expert editorial commentary, offering the reader a broader and easily understood context for each case, as well as key citations from the literature. Syncope Cases is a valuable contribution to your collection; edited by seven prominent authorities on the management of syncope from four countries, with more than 130 contributors, this book provides a unique additional step in the fostering of a better understanding of the many factors that can cause syncope, with the ultimate goal of facilitating the delivery of more precise and cost-effective care for syncope patients. It is a contribution that should be widely read, and one that offers the possibility of distinctly enhancing medical care of the syncope patient.

Trauma Resuscitation

Challenging existing methodological conceptions of the analytic approach to aesthetics, Jukka Mikkonen brings together philosophy, literary studies and cognitive psychology to offer a new theory on the cognitive value of reading fiction. Philosophy, Literature and Understanding defends the epistemic significance of narratives, arguing that it should be explained in terms of understanding rather than knowledge. Mikkonen formulates understanding as a cognitive process, which he connects to narrative imagining in order to assert that narrative is a central tool for communicating understanding. Demonstrating the effects that literary works have on their readers, he examines academic critical analysis, responses of the reading public and nonfictional writings that include autobiographical testimony to their writer's influences and attitudes to life. In doing so, he provides empirical evidence of the cognitive benefits of literature and of how readers demonstrate the growth of their understanding. By drawing on the written testimony of the reader, this book is an important intervention into debates on the value of literature that incorporates understanding in new and imaginative ways.

The Dilated Body

Managing Workplace Negativity gives managers, team leaders, trainers, and other human resources professionals much-needed help in treating the negativity bug.

Housing and Social Theory

This work presents the first comprehensive and systematic treatment of all relevant issues and topics in contemporary global bioethics. Now that bioethics has entered into a novel global phase, a wider set of issues, problems and principles is emerging against the backdrop of globalization and in the context of global relations. This new stage in bioethics is furthermore promoted through the ethical framework presented in the UNESCO Universal Declaration on Bioethics and Human Rights adopted in 2005. This Declaration is the first political statement in the field of bioethics that has been adopted unanimously by all Member States of UNESCO. In contrast to other international documents, it formulates a commitment of governments and is part of international law (though not binding as a Convention). It presents a universal framework of ethical principles for the further development of bioethics at a global level. The Encyclopedia of Global Bioethics caters to the need for a comprehensive overview and systematic treatment of all pertinent new topics and issues in the emerging global bioethics debate. It provides descriptions and analysis of a vast range of important new issues from a truly global perspective and with a cross-cultural approach. New issues covered by the Encyclopedia and neglected in more traditional works on bioethics include, but are not limited to, sponsorship of research and education, scientific misconduct and research integrity, exploitation of research participants in resource-poor settings, brain drain and migration of healthcare workers, organ trafficking and transplant tourism, indigenous medicine, biodiversity, commodification of human tissue, benefit sharing, bio industry and food, malnutrition and hunger, human rights and climate change.

The Moral Laboratory

Stroke Nursing
