When a pure breeding green pea pod is crossed with a pure breeding yellow pea pod, the offspring are called the first filial (F1) generation

We can use a Punnett Square to work out what the genotypes and phenotypes of the F1 generation will be

Work out the parental genotypes

Write out the parental gametes

Work out the offspring genotypes

Work out the offspring phenotypes

Work out the ratio of the offspring phenotypes

Therefore, in the resultant F2 generation there are two heterozygous green pods, one homozygous green pod and one homozygous yellow pod

The test cross allows us to work out which of these genotypes the green pea pod has
