Migration in European History

Since the fall of the Iron Curtain, migration has become a major cause for concern in many European countries, but migrations to, from and within Europe are nothing new, as Klaus Bade reminds us in this timely history. A history of migration to, from and within Europe over a range of eras, countries and migration types. Examines the driving forces and currents of migration, their effects on the cultures of both migrants and host populations, including migration policies. Focuses on the nineteenth and twentieth centuries, particularly the period from the Second World War to the present. Illuminates concerns about migration in Europe today. Acts as a corrective to the alarmist reactions of host populations in twenty-first century Europe.

Migration in European History

This two-volume collection of articles on European migration during the 19th and 20th centuries examines the motivations for migration, drawing on the particular experience of Irish, German, Scottish, Italian, Scandinavian and other European migrants, as well as those who migrated to Europe, such as West Indian migrants into Britain. The first volume examines the hostility faced by migrants, both in their home countries and their countries of destination. The second volume considers the contributions migrants have made to their host countries, and compares the experiences of different migrant groups. In addition, the continuing links between migrants and their countries of origin is explored through a series of essays and papers. Altogether there are 51 articles, dating from 1950 to 1994.

European Encounters

This book reminds us of Europe's multi-faceted history of expulsions, flight, and labour migration and the extent to which European history since 1945 is a history of migration. While immigration and ethnic plurality have often been divisive issues, encounters between Europeans and newcomers have also played an important part in the development of a European identity. The authors analyze questions of individual and collective identities, political responses to migration, and the way in which migrants and migratory movements have been represented, both by migrants themselves and their respective host societies. The book's distinctive multi-disciplinary and international approach brings together experts from several fields including history, sociology, anthropology and political science. 'European Encounters' will serve as an invaluable tool for students of contemporary European history, migration, and ethnic identities.

Migration in European History: Immigration history and the future of international migration

After the Second World War, the international migration regime in Europe took a course different from the global migration regime and the migration regimes in other regions of the world. Cumbersome and arbitrary administrative practices prevailed in the late 1940s in most parts of Europe. The gradual implementation of regulations for the free movement of people within the European Community, European citizenship, and the internal and external dimensions of the Schengen agreements profoundly transformed the European migration regime. These instruments produced a regional regime in Europe with an unparalleled degree of intraregional openness and an unparalleled degree of closure towards migrants from outside Europe. This book relies on national and international archives to explain how German strategies during the Cold War shaped the openness of that original regime. This migration regime helped Germany to create a stable international order in Western Europe after the war, conducive to German Reunification and supported German economic expansion. The book embraces the whole period of development of this regime, from 1947 through 1992. It deals with all types of migrants between and towards European countries: unskilled labourers, skilled professionals, self-employed workers, and migrant workers' family members, examining both their access to economic activity and their social and political rights.

The History of the European Migration Regime

Explores the linkage between two prominently debated topics: migration on the one hand and memory on the other. It addresses the question of how (im)migration histories as well as (im)migrants themselves and their histories are collectively remembered and represented in different European countries. School textbooks as well as migration museums and exhibitions are analyzed for this purpose. The authors challenge the marginalization of the rich European (im)migration history in the collective memories of many European countries and therewith tackle issues which are inherent to today's immigration societies.

Migration and Memory

Praise for the first edition: "By far the best general book on its subject.... Moving Europeans will remain a standard reference for some time to come." -Charles Tilly "Moch has reconceived the social history of Europe." --David Levine Moving Europeans tells the story of the vast movements of people throughout Europe and examines the links between human mobility and the fundamental changes that transformed European life. This update of a classic text describes the Western European migration from the pre-industrial era to the year 2000. For this new edition, Leslie Page Moch reconsiders the 20th century in light of fundamental changes in labor, years of conflict, and the new migrations following the end of colonial empires, the fall of communism, and globalization. This new edition also features a greatly expanded and up-to-date bibliography.

Moving Europeans, Second Edition

"Migration is perhaps the most pressing issue of our time, and it has completely decentered European politics in recent years. But as we consider the current refugee crisis, acclaimed historian Peter Gatrell reminds us that the history of Europe has always been one of people on the move. The end of World War II left Europe in a state of confusion with many Europeans virtually stateless. Later, as former colonial states gained national independence, colonists and their supporters migrated to often-unwelcoming metropolises. The collapse of communism in 1989 marked another fundamental turning point. Gatrell places migration at the center of post-war European history, and the aspirations of migrants themselves at the center of the story of migration. This is an urgent history that will reshape our understanding of modern Europe"--

The Unsettling of Europe

The History of Migration in Europe belies several myths by arguing, for example, that immobility has not been the "normal" condition of people before the modern era. Migration (far from being an income-maximizing choice taken by lone individuals) is often a household strategy, and local wages benefit from migration. This book shows how successes arise when governments liberalize and accompany the international movements of people with appropriate legislation, while failures take place when the legislation enacted is insufficient, belated or ill shaped. Part I of this book addresses mainly methodological issues. Past and present migration is basically defined as a cross-cultural movement; cultural boundaries need prolonged residence and active integrationist policies to allow

cross-fertilization of cultures among migrants and non-migrants. Part II collects chapters that examine the role of public bodies with reference to migratory movements, depicting a series of successes and failures in the migration policies through examples drawn from the European Union or single countries. Part III deals with challenges immigrants face once they have settled in their new countries: Do immigrants seek "integration" in their host culture? Through which channels is such integration achieved, and what roles are played by citizenship and political participation? What is the "identity" of migrants and their children born in the host countries? This text's originality stems from the fact that it explains the complex nature of migratory movements by incorporating a variety of perspectives and using a multi-disciplinary approach, including economic, political and sociological contributions.

The History of Migration in Europe

The issues around settlement, belonging, and poor relief have for too long been understood largely from the perspective of England and Wales. This volume offers a pan-European survey that encompasses Switzerland, Prussia, Belgium, the Netherlands, and Britain. It explores how the conception of belonging changed over time and space from the 1500s onwards, how communities dealt with the welfare expectations of an increasingly mobile population that migrated both within and between states, the welfare rights that were attached to those who "belonged," and how ordinary people secured access to welfare resources. What emerged was a sophisticated European settlement system, which on the one hand structured itself to limit the claims of the poor, and yet on the other was peculiarly sensitive to their demands and negotiations.

Migration, Settlement and Belonging in Europe, 1500–1930s

Looking back over the centuries, migration has always formed an important part of human existence. Spatial mobility emerges as a key driver of urban evolution, characterized by situation-specific combinations of opportunities, restrictions, and fears. This collection of essays investigates interactions between European cities and migration between the early modern period and the present. Building on conceptual approaches from history, sociology, and cultural studies, twelve contributions focus on policies, representations, and the impact on local communities more generally. Combining case-studies and theoretical reflections, the volume's contributions engage with a variety of topics and disciplinary perspectives yet also with several common themes. One revolves around problems of definition, both in terms of demarcating cities from their surroundings and of distinguishing migration in a narrower sense from other forms of short- and long-distance mobility. Further shared concerns include the integration of multiple analytical scales, contextual factors, and diachronic variables (such as urbanization, industrialization, and the digital revolution).

Migration and the European City

Immigrants and Foreigners in Central and Eastern Europe during the Twentieth Century challenges widespread conceptions of Central and Eastern European countries as merely countries of origin. It sheds light on their experience of immigration and the establishment of refugee regimes at different stages in the history of the region. The book brings together a variety of case studies on Poland, Hungary, Czechoslovakia, and Yugoslavia, and the experiences of return migrants from the United States, displaced Hungarian Jews, desperate German social democrats, resettled Magyars, resourceful tourists, labour migrants, and Zionists. In doing so, it highlights and explores the variety of experience across different forms of immigration and discusses its broader social and political framework. Presenting the challenges within the history of immigration in Eastern Europe and considering both immigration to the region and emigration from it, *Immigrants and Foreigners in Central and Eastern Europe during the Twentieth Century* provides a new perspective on, and contribution to, this ongoing subject of debate.

Immigrants and Foreigners in Central and Eastern Europe during the Twentieth Century

This book provides a fresh interdisciplinary analysis into the lives of migrant children and youth over the course of the twentieth century and up to the present day. Adopting biopolitics as a theoretical framework, the authors examine the complex interplay of structures, contexts and relations of power which influence the evolution of child migration across national borders. The volume also investigates children's experiences, views, priorities and expectations and their roles as active agents in their own migration. Using a great variety of methodologies (archival research, ethnographic observation, interviews) and sources (drawings, documents produced by governments and experts, films and

press), the authors provide richly documented case studies which cover a wide geographical area within Europe, both West (Belgium, France, Germany) and East (Romania, Russia, Ukraine), South (Italy, Portugal, Turkey) and North (Sweden), enabling a deep understanding of the diversity of migrant childhoods in the European context.

The Unsettling of Europe

The History of Migration in Europe belies several myths by arguing, for example, that immobility has not been the "normal" condition of people before the modern era. Child Migration and Biopolitics

In this open access book, experts on integration processes, integration policies, transnationalism, and the migration and development framework provide an academic assessment of the 2011 European Agenda for the Integration of Third-Country Nationals, which calls for integration policies in the EU to involve not only immigrants and their society of settlement, but also actors in their country of origin. Moreover, a heuristic model is developed for the non-normative, analytical study of integration processes and policies based on conceptual, demographic, and historical accounts. The volume addresses three interconnected issues: What does research have to say on (the study of) integration processes in general and on the relevance of actors in origin countries in particular? What is the state of the art of the study of integration policies in Europe and the use of the concept of integration in policy formulation and practice? Does the proposal to include actors in origin countries as important players in integration policies find legitimation in empirical research? A few general conclusions are drawn. First, integration policies have developed at many levels of government: nationally, locally, regionally, and at the supra-national level of the EU. Second, a multitude of stakeholders has become involved in integration as policy designers and implementers. Finally, a logic of policymaking—and not an evidence-based scientific argument—can be said to underlie the European Commission's redefinition of integration as a three-way process. This book will appeal to academics and policymakers at international, European, national, regional, and local levels. It will also be of interest to graduate and master-level students of political science, sociology, social anthropology, international relations, criminology, geography, and history.

The History of Migration in Europe

Within Germany, policies and cultural attitudes toward migrants have been profoundly shaped by the difficult legacies of the Second World War and its aftermath. This wide-ranging volume explores the complex history of migration and diversity in Germany from 1945 to today, showing how conceptions of "otherness" developed while memories of the Nazi era were still fresh, and identifying the continuities and transformations they exhibited through the Cold War and reunification. It provides invaluable context for understanding contemporary Germany's unique role within regional politics at a time when an unprecedented influx of immigrants and refugees present the European community with a significant challenge.

Integration Processes and Policies in Europe

An acclaimed historian examines postwar migration's fundamental role in shaping modern Europe. Migration is perhaps the most pressing issue of our time, and it has completely decentered European politics in recent years. But as we consider the current refugee crisis, acclaimed historian Peter Gatrell reminds us that the history of Europe has always been one of people on the move. The end of World War II left Europe in a state of confusion with many Europeans virtually stateless. Later, as former colonial states gained national independence, colonists and their supporters migrated to often-unwelcoming metropolises. The collapse of communism in 1989 marked another fundamental turning point. Gatrell places migration at the center of post-war European history, and the aspirations of migrants themselves at the center of the story of migration. This is an urgent history that will reshape our understanding of modern Europe.

The Unsettling of Europe

The first history of London to show how immigrants have built, shaped and made a great success of the capital city London is now a global financial and multicultural hub in which over three hundred languages are spoken. But the history of London has always been a history of immigration. Panikos Panayi explores the rich and vibrant story of London- from its founding two millennia ago by Roman invaders, to Jewish and German immigrants in the Victorian period, to the Windrush generation invited from Caribbean countries in the twentieth century. Panayi shows how migration has been fundamental to London's economic, social, political and cultural development. *Migrant City* sheds light on the various ways in which newcomers have shaped London life, acting as cheap labour, contributing to the success of its financial sector, its curry houses, and its football clubs. London's economy has long been driven by migrants, from earlier continental financiers and more recent European Union citizens. Without immigration, fueled by globalization, Panayi argues, London would not have become the world city it is today.

International Migration in Europe

This book focusses on the instruments, practices, and materialities produced by various authorities to monitor, regulate, and identify migrants in European cities from the sixteenth to the twentieth centuries. Whereas research on migration regulation typically looks at local policies for the early modern period and at state policies for the contemporary period, this book avoids the stalemate of modernity narratives by exploring a long-term genealogy of migration regulation in which cities played a pivotal role. The case studies range from early modern Venice, Stockholm and Constantinople, to nineteenth- and twentieth-century port towns and capital cities such as London and Vienna.

Migrant City

Charts the transnational story of Romanian Germans in modern Europe - their migration, their position as a minority, and their memories.

Migration Policies and Materialities of Identification in European Cities

Migration has become an increasingly important phenomenon for European societies. Patterns of migration flows can change greatly over time, with the size and composition of migrant populations reflecting both current and historical patterns of migration flows. Combined with the complexity and long-term nature of the migrant integration process, this can present challenges to policy-makers who need good quality information on which to base decisions. It is important that the statistics should go beyond the basic demographic characteristics of migrants and present a wider range of socio-economic information on migrants and their descendants. This publication looks at a broad range of characteristics of migrants living in the European Union and EFTA countries. It looks separately at the foreign-born, the foreign citizens, and the second generation. It addresses a variety of aspects of the socio-economic situation of migrants including labour market situation, income distribution, and poverty. The effects of different migration-related factors (i.e. reason of migration, length of residence) are examined. The situation of migrants is compared to that of the non-migrant reference population.

Migrating Memories

Transit migration is a term that is used to describe mixed flows of different types of temporary migrants, including refugees and labor migrants. In the popular press, it is often confused with illegal or irregular migration and carries associations with human smuggling and organized crime. This volume addresses that confusion, and the uncertainty of terminology and analysis that underlies it, offering an evidence-based, comprehensive approach to defining and understanding transit migration in Europe.

Migrants in Europe

Within the ever-changing global map of migrations, Southern Europe has come to occupy a pivotal place: formerly a region of mass emigration overseas and to Northern Europe; now, since the 1980s, a region of mass immigration. The migrants come from many source areas - North and Sub-Saharan Africa, Asia, Latin America and Eastern Europe. As Europe struggles to control immigration from the developing world, the EU's southern flank is perceived as the weak link of 'Fortress Europe'. With a balanced and detailed coverage of the situation in Portugal, Spain, Italy and Greece, this book examines the many facets of Southern Europe's new status as a region of large-scale immigration. Amongst the topics covered are the diverse roles played by immigrants in Southern European labour markets; issues of social and spatial exclusion; migration and gender relations; the generally slow evolution of policies of control, management and integration of immigrants; and the wider strategic concerns of security, trade and geopolitics.

Transit Migration in Europe

This book is a vital exploration of the harrowing stories of mass displacement that took place in the first half of the 20th century from the perspective of forced migrants themselves. The volume brings together 15 interrelated case studies which show how the deportation, evacuation and flight of millions of people as a result of the First World War intensified rather than alleviated ethnic conflicts which culminated in population transfers on an even larger scale during and immediately after the Second World War. While each chapter focuses on a different group of refugees and displaced persons, the text as a whole looks at the experience of forced migration as a complex set of evolving relationships with the receiving society, the homeland, the broader diaspora and other migrant communities living within the same host country. This innovative, four-dimensional model provides an overarching conceptual framework that binds the chapters together within the longer arc of European history. By going beyond the conventional narratives of national victimhood and (un)successful assimilation of refugees, *A Transnational History of Forced Migrants in Europe* reveals that identities of forced migrants in the first half of the 20th century were individualised, hybrid and constantly reconstructed in response to socioeconomic forces and political pressures. The case studies collected in this volume further suggest that age, gender, social class, educational level and the personal experiences of 'unwilling nomads' are more important to the understanding of forced migration history than ethnoreligious identities of victims and perpetrators.

Eldorado Or Fortress? Migration in Southern Europe

The political and social activism of immigrants to Europe since 1945 takes the spotlight in this volume. Each chapter draws on research from international scholars, offering a riveting look at a variety of migrant experiences and providing welcome comparisons of the impact of migration on different countries.

A Transnational History of Forced Migrants in Europe

This text fulfills a major gap by comprehensively reviewing one of the most salient policy issues in Europe today, migration and immigration. It is the first book to address the question of whether we can legitimately speak of a European politics of migration that links states in terms of their policy response to each other and to an evolving EU policy. The book carefully differentiates between different types of migration, introduces the main concepts and debates, and provides a broad comparative framework from which to assess the role and impact of individual states and the European Union (EU) and European integration to this key contemporary issue. Topical and up-to-date, the author fully reviews the politics and policies of immigration across the breadth and depth of Europe including the 'older' immigration countries of France, Germany and the United Kingdom, the 'newer' southern European countries, and the enlargement states of East and Central Europe. *The Politics of Immigration and Migration in Europe* is essential reading for all undergraduate and post-graduate students of European politics, political science and the social sciences more generally. Andrew Geddes lectures at the School of Politics and Communications Studies, University of Liverpool. 'This book will be essential reading

for students of migration and European integration, but will also be important for decision-makers, and, indeed, anyone who wants to understand one of the burning issues of our times' - Stephen Castles, Professor of Migration and Refugee Studies, Director of the Refugee Studies Centre, University of Oxford

Migration and Activism in Europe since 1945

Deze studie ontwikkelt een geheel nieuwe benadering van het vraagstuk: Hoe wordt migratie- en integratiebeleid in tien Europese landen gemaakt? Wie is daarbij betrokken? Welke invloed hebben wetenschappers en maatschappelijke partners op de vorming en uitvoering van beleid? De auteurs concluderen dat beleid begrepen moet worden als resultaat van nationale historische verhoudingen en opvattingen binnen nationale contexten enerzijds, en anderzijds ontstaan is onder invloed van wereldwijde en supra-nationale invloeden.

The Politics of Migration and Immigration in Europe

Throughout Europe longstanding ideas of what it means to be a citizen are being challenged. The sense of belonging to a nation has never been more in flux. Simultaneously, nationalistic and racist movements are gaining ground and barriers are being erected against immigration. This volume examines how concepts of citizenship have evolved in different countries and varying contexts. It explores the inter-connection between ideas of the nation, modes of citizenship and the treatment of migrants. Adopting a multi-disciplinary and international approach, this collection brings together experts from several fields including political studies, history, law and sociology. By juxtaposing four European countries - Britain, France, Germany and Italy - and setting current trends against a historical background, it highlights important differences and exposes similarities in the urgent questions surrounding citizenship and the treatment of minorities in Europe today.

Migration Policymaking in Europe

Why did sixty million people leave Europe for overseas destinations between 1815 and 1930? What were the social and economic causes and effects of this mass migration? Why did some people emigrate and not others, and why did so many emigrants return to Europe? This short, comprehensive survey answers these and other questions regarding emigration from different parts of Europe. Written specifically for undergraduate students, it reviews the current literature in several European languages, summarizes both economic and demographic theories, and analyzes the relation between economic change in Europe and the emigration rate.

Citizenship, Nationality and Migration in Europe

Translated by Carl Ipsen. This short book provides a succinct and masterly overview of the history of migration, from the earliest movements of human beings out of Africa into Asia and Europe to the present day, exploring along the way those factors that contribute to the successes and failures of migratory groups. Separate chapters deal with the migration flows between Europe and the rest of the world in the 19th and 20th centuries and with the turbulent and complex migratory history of the Americas. Livi Bacci shows that, over the centuries, migration has been a fundamental human prerogative and has been an essential element in economic development and the achievement of improved standards of living. The impact of state policies has been mixed, however, as states have each established their own rules of entry and departure - rules that today accentuate the differences between the interests of the sending countries, the receiving countries, and the migrants themselves. Lacking international agreement on migration rules owing to the refusal of states to surrender any of their sovereignty in this regard, the positive role that migration has always played in social development is at risk. This concise history of migration by one of the world's leading demographers will be an indispensable text for students and for anyone interested in understanding how the movement of people has shaped the modern world.

Emigration from Europe 1815-1930

Written by one of the world's foremost historians of human migration, *Peoples and Empires* is the story of the great European empires—the Roman, the Spanish, the French, the British—and their colonies, and the back-and-forth between “us” and “them,” culture and nature, civilization and barbarism, the

center and the periphery. It's the history of how conquerors justified conquest, and how colonists and the colonized changed each other beyond all recognition.

A Short History of Migration

This book deals with the ongoing processes of migration and boundary-(re)making in Europe and other parts of the world.

Peoples and Empires

Since the 1980s, anti-immigrant discourse has shifted away from the color of immigrants to their religion and culture, focusing on newcomers from Muslim countries who are feared as terrorists and the products of tribal societies with values fundamentally opposed to those of secular western Europe. Leo Lucassen's *The Immigrant Threat* tackles the question of whether it is reasonable to believe that the integration process of these new immigrants will indeed be fundamentally different in the long run (over multiple generations) from ones experienced by similar immigrant groups in the past.

Transnational Migration and Border-Making

Migrations have moulded Balkan societies. In the multiethnic empires migrations were very common, and in the modern era, economic reasons led millions of people to go abroad as overseas emigrants before World War I, as Gastarbeiter in the 1960s and 70s, or as economic migrants since 1990. In addition, many people had to leave their homes as political refugees or as victims of ethnic cleansing. But Balkan countries were and are also hosts to immigrants and refugees, and they have witnessed enormous rural-urban migrations. This volume, the first part of a selection of conference papers, focusses on historical and cultural aspects of migration in, from and to Southeastern Europe.

The Immigrant Threat

An examination of population movements, both forced and voluntary, within the broader context of Europe in the aftermath of the Second World War, in both Western and Eastern Europe. The authors bring to life problems of war and post-war chaos, and assess lasting social, political and demographic consequences.

Migration In, From, and to Southeastern Europe

Considers the phenomenon of European migration during the three centuries following the first voyage of Columbus to the New World. Although these studies focus on a range of European countries, they point collectively to the fact that migration led to early death rather than quick fortune.

The Disentanglement of Populations

Jan Logemann is a Research Fellow at the German Historical Institute in Washington D.C., USA, and project coordinator of *Transatlantic Perspectives: Europe in the Eyes of European Immigrants to the United States*. His research focuses on transatlantic comparisons, the role of European immigrants in transatlantic exchanges, as well as on the development of mass consumer societies in the twentieth century. Donna Gabaccia is a professor of history at the University of Minnesota, USA. She is a leading migration historian and a noted specialist in women's immigration history. Her work has focused on Italian-American migration to the U.S., food and ethnicity, as well as on global and transnational migrations. Sally Gregory Kohlstedt is a professor of history of science and technology at the University of Minnesota, USA. Her research focuses on analyzing the ways in which science intersects with culture, recognizing that much social change in recent centuries has been influenced by science and technology and that the issues that arise in science are often connected to contemporary social and economic forces.

Europeans on the Move

"The exodus of refugees from Nazi Germany in the 1930s has received far more attention from historians, social scientists, and demographers than many other migrations and persecutions in Europe. However, as a result of the overwhelming attention that has been given to the Holocaust within the historiography of Europe and the Second World War, the issues surrounding the flight of people from Nazi Germany prior to 1939 have been seen as *Vorgeschichte* (pre-history) ... Based on a comparative

analysis of national case studies, this volume deals with the challenges that the pre-1939 movement of refugees from Germany and Austria posed to the immigration controls in the countries of interwar Europe"--Publisher's description.
