Da Vinci Decoded

Author Michael Gelb ignited the current fascination with all things Da Vinci with his runaway bestseller, *How to Think like Leonardo da Vinci: Seven Steps to Genius Every Day*. Just as that book showed readers how to use the seven Da Vincian principles to develop their creative potential, his new book, *Da Vinci Decoded*, will help you use the same principles to cultivate your spiritual potential. Wonder. Appreciation. Awareness. Wholeness... In the Western world of the fifteenth century, these personal qualities were all boldly embodied in one extraordinary man. From art to botany, anatomy to mechanics, Da Vinci was a profoundly original thinker fully in tune with the world of man and nature, and with the divine spirit that bridges the two. In this bold new guide to awakening the soul, Michael Gelb draws on Leonardo's writings, inventions, and works of art to show how you, too, can practice the seven essential principles by which Leonardo lived and worked: Filled with practical exercises that will help you put each of the seven principles into use, a series of reflective questions designed for self-assessment, and inspirational sayings drawn from the world's great wisdom traditions, *Da Vinci Decoded* offers a wide range of tools to use in your spiritual quest. Now you can let Leonardo and this book be your personal guides to creating your own personal spiritual renaissance today.

Sustaining Creativity and the Arts in the Digital Age

The development of technology and online learning has transformed not only the way information is transmitted but also the way learning and teaching are approached. As a socio-cultural construction, arts and creativity reflect the societal context. Accordingly, nowadays, educating the arts and creative potential is necessarily affected by technology. *Sustaining Creativity and the Arts in the Digital Age* discusses from a global perspective how the relationship between the arts, creativity, and education is evolving and developing in the digital age and considers the multiple dimensions of creativity. Covering key topics such as robots, dreaming, art education, innovation, and digital technologies, this reference

work is ideal for artists, industry professionals, researchers, academicians, practitioners, scholars, educators, and students.

Online Learning for STEM Subjects

The Global Collaboration initiatives related in this book are examples of how educators have experimented with different mechanisms to provide science, technology, engineering and mathematics (STEM) education programmes through information and communication technologies. In many cases, these programmes have looked at the allied personal communication and collaboration skills that students of these subjects also need: the so-called STEM+ curriculum. In particular, these approaches to STEM+ provision show how the internationalization of education can be made more effective and accessible through the exploitation of collaborative technologies and non-traditional pedagogies. The approaches address the following themes: technologies for distance learning and collaboration pedagogies for online learning remote communication and collaboration An international perspective is made possible within the book through the inclusion of authors from North America, Europe and Asia. These authors present case studies from technology-enhanced learning projects over the past six years.

Leonardo

IF YOU THINK WE DO NOT NEED TO KNOW MORE ABOUT LEONARDO DA VINCI, THIS BOOK WILL MAKE YOU THINK AGAIN! - 'The Last Supper' has been the subject of musical compositions, films, and books - perhaps the most controversial of which was the Dan Brown novel 'The Da Vinci Code'. Author, musician and writer Giovanni Pala, discovered a incredible secret code depicted in Leonardo da Vinci's painting of The Last Supper.

Decoding Da Vinci

Five hundred years ago Leonardo da Vinci "decoded" a theological doctrine about God encoded into the first chapter of the Bible's Book of Genesis. This had been done during the Jewish Babylonian Captivity two thousand year before Leonardo lived. The "theological" message he discovered was so contrary to the teachings of the that he dared not reveal it to anyone. To leave a record of his discovery he encoded it into his most famous painting the Mona Lisa. If the Medieval Inquisition had "decoded" the "message" that Leonardo da Vinci had "encoded" into the Mona Lisa they would probably have burned him at the stake for heresy. This work of art has been the subject of countless controversies and inquiries down through the centuries. The most controversial theory is the painting's depiction of what appears to be an androgens person. One analysis indicates a possible underlying sketch of the artist as the model. There are also alleged accounts of various women and even a man modeling for the portrait. This book is not a work of fiction. It examines and explains in painstaking detail what Leonardo da Vinci had discovered and encoded into the world's most famous painting and why his "message" would have been heresy to the Medieval Church.. Leonard da Vinci is the most revered genius of the medieval period. However, despite Leonardo's many, various and unique accomplishments he remains best known to the world for the Mona Lisa. This is just as he had intended. The author evaluates the known facts, examines the various conjectures and explores the historical background, - all of which solves the mystery of Mona Lisa's enigmatic smile. In doing so it leads the reader to the logical and dramatic conclusion Leonardo da Vinci had deliberately and carefully planned to leave to posterity.

Discovering precise encoding in the majority of Leonardo's art, the author's insightful analysis reveals the once-heretical transmission of what one of Leonardo da Vinci's collaborators called a "very secret science." Da Vinci encoded his most important secrets in plain sight, where they have been overlooked for centuries. His paintings and drawings, although few in number, are the most visited, most written about and most valuable art in the world. Could this be due to his talent of encoding this science into his works? Scott Onstott concludes that the secret science works because it is part of you, no matter whether you are conscious of it or not. This is a must read if you want to comprehend the implications of Leonardo's cosmic ordering principle.

Secrets in Plain Sight

The Heroine's Journey describes contemporary woman's search for wholeness in a society where she has been defined according to masculine values. Drawing on cultural myths and fairy tales, ancient

symbols and goddesses, and the dreams of contemporary women, Murdock illustrates the need for—and the reality of—feminine values in Western culture. This special anniversary edition, with a new foreword by Christine Downing and preface by the author, illuminates that this need is just as relevant today as it was when the book was originally published thirty years ago.

Leonardo da Vinci, Pathfinder of Science

The Salvator Mundi is the first Leonardo painting to be discovered for over a century. Following its re-emergence, it played a leading role in the landmark Leonardo exhibition at the National Gallery in London in 2011, after which it was purchased by a Russian oligarch. In 2017 it was auctioned by Christie's in New York, fetching the world record price of \$450m, and now forms part of the collection of Louvre Abu Dhabi. The Salvator Mundi may be seen as the devotional counterpart to the Mona Lisa, having an extraordinary, communicative presence. The artist has reformed the very traditional subject matter in a number of ways. The elusiveness of Christ's expression suggests his spiritual origins beyond the world of the senses. The traditional sphere of the earth has been transformed into a rock-crystal orb and signifies a crystalline sphere of the heavens. In addition to its spiritual dimension, the image exploits Leonardo's optical knowledge and his growing sense of the illusiveness of seeing. Only the blessing hand is in reasonably sharp focus, with his features softly veiled. The scintillating curls of his hair are characterised in line with his theory that the physics of the curling of hair is analogous to vortex motion in water. This book looks at evidence of Leonardo's Salvator Mundi in the collections of Charles I and Charles II. It explores the appraisal of works by Leonardo at the Stuart courts, and proposes that how works attributed to Leonardo were first encountered and understood in seventeenth-century Britain would shape the wider evolution of Leonardo as a cultural icon. This volume gives a dramatic first-hand account of the modern-day discovery of the painting, from its purchase in a minor New Orleans auction house, to the cleaning of the picture that would disclose it as Leonardo's startling original, and the research processes that would uncover illustrious and obscure former owners. The book presents the definitive study of the new masterpiece.

Forthcoming Books

Many great works of art have been created that we call "Christian," but none has received as much acclaim as Leonardo da Vinci's Last Supper. Art lovers venerate it for its composition and noble aesthetics, whereas, for Christians, it epitomizes the intimacy between Christ and his disciples. In recent years--following the publication of bestselling fictional narratives and dubious historical studies--The Last Supper has also become the focus of intrigue, controversy, speculation, and sensation. Recent restoration of the painting has exposed remnants of the original work and removed falsifications created by over-painting. Thus, for the first time since its creation more than five hundred years ago, we can contemplate Da Vinci's masterpiece in its more or less original form. This lavishly illustrated, full-color book reproduces many details of the restored work, and the author turns our attention to newly revealed aspects of The Last Supper that lead to fresh interpretations. The philosopher Rudolf Steiner called The Last Supper the world's most important work of art, adding that it revealed "the meaning of Earth existence." Michael Ladwein sheds light on many aspects of the spiritual facts that can be uncovered in this immortal painting--one that has lost nothing of its urgency in our modern world.

How an oddly attributed \$19,000 picture proved to be a \$100 million work by Leonardo da Vinci—a true art-world detective story In late 2010, art collector Peter Silverman revealed that a "German, early 19th century" portrait he had bought for \$19,000 was, in fact, a previously unknown drawing by Leonardo da Vinci—an exquisite depiction of Bianca Sforza, rendered 500 years ago. In Leonardo's Lost Princess, Silverman gives a riveting first-person account of how his initial suspicions of the portrait's provenance were confirmed repeatedly by scientists and art experts. He describes the path to authentication, fraught with opposition and controversy. The twists and turns of this fascinating, decade-long quest lead from art history to cutting-edge science, and from a New York art gallery to Paris, Milan, Zurich, and ultimately a Warsaw library where the final, convincing evidence that the portrait was indeed by da Vinci was found. Takes an up-close look at the workings of the art world and at figures ranging from dealers and connoisseurs to a suspected forger Discusses current scientific techniques used to investigate and authenticate works of art, such as carbon dating and cutting-edge photography Uses Silverman's drawing as an entree into Leonardo da Vinci's world: his studio, his style, and his methods Explores the intersection of art and science in the authentication process, involving the work of a man who embodied that intersection Unearthing the secrets almost lost to history, the book is ideal reading for art lovers and anyone interested in an astounding case of "whodunit."

Leonardo da Vinci: Thoughts on Art & Life

Leonardo's early life was spent in Florence, his maturity in Milan, and the last three years of his life in France. Leonardo's teacher was Verrocchio. First he was a goldsmith, then a painter and sculptor: as a painter, representative of the very scientific school of draughtsmanship; more famous as a sculptor, being the creator of the Colleoni statue at Venice, Leonardo was a man of striking physical attractiveness, great charm of manner and conversation, and mental accomplishment. He was well grounded in the sciences and mathematics of the day, as well as a gifted musician. His skill in draughtsmanship was extraordinary; shown by his numerous drawings as well as by his comparatively few paintings. His skill of hand is at the service of most minute observation and analytical research into the character and structure of form. Leonardo is the first in date of the great men who had the desire to create in a picture a kind of mystic unity brought about by the fusion of matter and spirit. Now that the Primitives had concluded their experiments, ceaselessly pursued during two centuries, by the conquest of the methods of painting, he was able to pronounce the words which served as a password to all later artists worthy of the name: painting is a spiritual thing, *cosa mentale*. He completed Florentine draughtsmanship in applying to modelling by light and shade, a sharp subtlety which his predecessors had used only to give greater precision to their contours. This marvellous draughtsmanship, this modelling and chiaroscuro he used not solely to paint the exterior appearance of the body but, as no one before him had done, to cast over it a reflection of the mystery of the inner life. In the Mona Lisa and his other masterpieces he even used landscape not merely as a more or less picturesque decoration, but as a sort of echo of that interior life and an element of a perfect harmony. Relying on the still quite novel laws of perspective this doctor of scholastic wisdom, who was at the same time an initiator of modern thought, substituted for the discursive manner of the Primitives the principle of concentration which is the basis of classical art. The picture is no longer presented to us as an almost fortuitous aggregate of details and episodes. It is an organism in which all the elements, lines and colours, shadows and lights, compose a subtle tracery converging on a spiritual, a sensuous centre. It was not with the external significance of objects, but with their inward and spiritual significance, that Leonardo was occupied.
