A food chain describes how different organisms eat each other, starting out with a plant and ending with an animal.

The atmosphere is the layer of gases that surrounds the Earth. The three most important gases in the atmosphere are nitrogen, oxygen and carbon dioxide. The atmosphere is made up of several layers. All living things need to be able to move. Moving does not have to consist of big movements. Even plants move, for example as the flowers and leaves turn to face the sun during the course of the day. We now know what animals, plants and other living organisms need. Organisms require (need) certain things or specific conditions. Let's take a look at the requirements necessary to sustain life.

Qualitative Research Methods is a comprehensive, all-inclusive resource for the theory and practice of qualitative/ethnographic research methodology. Serves as a "how-to" guide for qualitative/ethnographic research, detailing how to design a project, conduct interviews and focus groups, interpret and analyze data, and represent it in a compelling manner. Demonstrates how qualitative data can be systematically utilized to address pressing personal, organizational, and social problems. Written in an engaging style, with in-depth examples from the author's own practice. Comprehensive companion website includes sample syllabi, lesson plans, a list of helpful website links, test bank and exam review materials, and exercises and worksheets, available upon publication at <http://www.wiley.com/go/tracy>

The Magic Egg, and Other Stories

This open access textbook represents a vital contribution to global health education, offering insights into health promotion as part of patient care for bachelor's and master's students in health care (nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc.) as well as health care professionals, and providing an overview of the field of health science and health promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia, it first discusses the theory of health promotion and vital concepts. It then presents updated evidence-based health promotion approaches in different populations (people with chronic diseases, cancer, heart failure, dementia, mental disorders, long-term ICU patients, elderly individuals, families with newborn babies, palliative care patients) and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much-needed knowledge, translating research into guidelines for practice. Today's medical approaches are highly developed; however, patients are human beings with a wholeness of body-mind-spirit. As such, providing high-quality and effective health care requires a holistic physical-psychological-social-spiritual model of health care is required. A great number of patients, both in hospitals and in primary health care, suffer from the lack of a holistic oriented health approach: Their condition is treated, but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly, health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes: shorter hospital stays, less re-hospitalization, being better able to cope at home and improved well-being, which in turn lead to lower health-care costs. This scientific anthology is the first of its kind, in that it connects health promotion with the salutogenic theory of health throughout the chapters. The authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept, not only as the key concept of sense of coherence.

"This guidebook will help airports with Emergency Operations Center (EOC) planning and design considerations, such as (1) establishing an EOC in an existing facility; (2) upgrading a current EOC facility; (3) designing and building a new facility within the terminal (or other existing campus building); and (4) designing and building a greenfield project, which means the airport is not bound by any constraints with existing buildings or infrastructure such as the terminal or other existing campus structures." -- Page 1.

Health Promotion in Health Care – Vital Theories and Research

Facing the Unexpected presents the wealth of information derived from disasters around the world over the past 25 years. The authors explore how these findings can improve disaster programs, identify remaining research needs, and discuss disaster within the broader context of sustainable development. How do different people think about disaster? Are we more likely to panic or to respond with altruism? Why are 110 people killed in a Valujet crash considered disaster victims while the 50,000 killed annually in traffic accidents in the U.S. are not? At the crossroads of social, cultural, and economic factors, this book examines these and other compelling questions. The authors review the influences that shape the U.S. governmental system for disaster planning and response, the effectiveness of local emergency agencies, and the level of professionalism in the field. They also compare technological versus natural disaster and examine the impact of technology on disaster programs.

We rely on your support to help us keep producing beautiful, free, and unrestricted editions of literature for the digital age. Will you support our efforts with a donation? R.U.R., or Rossum's Universal Robots is a play written in 1920 by Karel Čapek, a Czech writer who wrote many plays and novels, many of them with science-fiction and dystopian themes. R.U.R. is perhaps the most well-known of these works in the English-speaking world because it brought the word "robot" into the language. "Robot" is derived from the Czech word meaning "worker." The play is set in the island headquarters of the R.U.R. corporation. The corporation has been manufacturing artificial beings which resemble humans, but who are tireless workers. They can be mass-produced in large numbers and are being adopted as workers in many countries. In the first scene of the play, they are visited by a young woman, Helena Glory, who aspires to relieve the lot of the robots, who she sees as oppressed. However, in what must be the fastest seduction scene in all drama, she is wooed and agrees to marry Harry Domin, the factory manager, who she has just met. She still however aspires to improve the life of robots and find a way to give them souls. Ultimately, however, this admirable desire leads to disaster for humankind. The play was translated into English, and slightly abridged, by Paul Selver and Nigel Playfair in 1923. This version quickly became popular with both British and American audiences and was well received by critics.

Design Considerations for Airport EOCs

Current and authoritative with many advanced concepts for petroleum geologists, geochemists, geophysicists, or engineers engaged in the search for or production of crude oil and natural gas, or interested in their habitats and the factors that control them, this book is an excellent reference. It is recommended without reservation. AAPG Bulletin.

Facing the Unexpected

This explorative study gives a descriptive overview of what organizations do and experience when they say they practice design thinking. It looks at how the concept has been appropriated in organizations and also describes patterns of design thinking adoption. The authors use a mixed-method research design fed by two sources: questionnaire data and semi-structured personal expert interviews. The study proceeds in six parts: (1) design thinking's entry points into organizations; (2) understandings of the descriptor; (3) its fields of application and organizational localization; (4) its perceived impact; (5) reasons for its discontinuation or failure; and (6) attempts to measure its success. In conclusion the report challenges managers to be more conscious of their current design thinking practice. The authors suggest a co-evolution of the concept's introduction with innovation capability building and the respective changes in leadership approaches. It is argued that this might help in unfolding design thinking's hidden potentials as well as preventing unintended side-effects such as discontented teams or the dwindling authority of managers.

Parts without a whole?

The Department of Health has until recently been focusing on speed of response as a measure of performance of the ambulance service, rather than on clinical outcomes for patients. The ambulance service achieves high levels of public satisfaction but there are wide variations in ambulance trusts' efficiency and the NAO concludes that the system has not delivered the best value for money to date. The 8-minute response target, intended for the most seriously ill patients, is one of the most demanding in the world. However, its application has skewed ambulance trusts' approach to performance measurement and management. The target is also applied to a much wider group of patients than intended. The report identifies various inefficiencies in the system, with cost per incident varying between £176 and £251. There is scope across the urgent and emergency care system to make more of different ways of responding to patients, such as clinical advice to callers over the phone and taking patients to minor injuries units rather than A&E departments. If all 11 trusts adopted the best practice currently being used in at least one trust, the NHS could save £165 million a year. The elements of the emergency care system are not yet fully integrated and this leads to delays in turnaround times at hospital A&Es. Over one-fifth of patient handovers take longer than the recommended 15 minutes. The new clinical quality indicators introduced from April offer the potential for a fuller measurement of performance based on outcomes.

The Elements of War Crimes will assist the International Criminal Court (ICC) in the interpretation and application of the articles of the ICC Statute defining the crimes under its jurisdiction. These will not only be necessary for the future work of the ICC in interpreting the crimes provisions, but also for national courts, which have primary responsibility in the prosecution of international crimes under the Rome Statute. This commentary provides a critical insight into the travaux préparatoires of the Preparatory Commission leading to the adoption of the elements of war crimes. It contains an analysis of existing case law related to each war crime in the Statute. It will provide States, judges, prosecutors and international and national lawyers with key background information to implement international humanitarian law in future cases dealing with war crimes under the ICC. A unique, indispensable tool for prosecuting and defense lawyers working in international criminal law.

The third edition of the Color Atlas of Emergency Trauma brings the reader to the bedside of patients with traumatic injuries, at one of the largest and busiest trauma centers in North America. It includes over 1200 images, designed as a comprehensive visual and reference guide to emergency trauma care. Organized by major body regions, this atlas explores the full spectrum of common and uncommon traumatic injuries, including those caused by firearms, stab wounds, blunt trauma, crush injury, and burns. It also covers special patient groups, such as pregnant, pediatric and geriatric populations. Each chapter is augmented with patient images at presentation, radiographic, intraoperative and autopsy images, and color illustrations and photographs showing key anatomy from the cadaver laboratory. With common pitfalls discussed and invaluable tips from a multidisciplinary group of experienced trauma care providers, this book is a useful and practical resource for all those involved in trauma care.

Cambridge IGCSE® Biology Coursebook with CD-ROM

The field of hip preservation surgery has evolved over the past decade as our understanding of hip pathomechanics and pathomorphology has expanded. The published literature on non-arthritic hip pathology, for example, has grown exponentially. The topics of controversy in the past decade have been answered in some cases, but new questions have also arisen. In addition to the 99 chapters in the original edition – most of which will be retained and updated as applicable – there will be over 30 brand new chapters focusing on new and more sophisticated techniques from authors that have been the pioneers of the field. The text is divided into nine thematic sections, covering the breadth of the topic and the current state of the art: basic science of the hip; operative basics for hip arthroscopy and open hip preservation surgery; pediatric hip conditions; approaches to disorders of the hip and pelvis; enthesopathy and neuromuscular disorders; hip fractures and instability; avascular necrosis; hip cartilage restoration; and oncologic conditions. Throughout, there is a heavy emphasis on surgical techniques, and video clips will be included in selected chapters. Written by edited by thought leaders and seasoned practitioners in the field, this new edition of Hip Arthroscopy and Hip Joint Preservation Surgery will remain the gold standard for orthopedic surgeons and sports medicine specialists, expanding on the range of techniques available to clinicians treating injuries to and disorders of the hip.

This manual is designed to help police executives and other senior executives meet the new challenges involved in countering the threat of terrorism by summarizing writings on the essential components of a counterterrorism plan. The first three parts of the manual address the preparatory steps of the executives preparing themselves and their agencies for the efforts to follow, understanding the threat, and development of a plan and a support network. The last three parts of the manual cover in more depth the three essential components of a counterterrorism plan: developing intelligence on possible terrorists; identifying and protecting major targets; and expanding disaster-response capabilities to encompass the response to a terrorist attack. The shooting attack on the Pulse nightclub in June 2016 claimed the lives of 49 individuals and injured 58 more. It was an event of extreme violence, carnage, and confusion. Yet the Orlando Police Department (OPD) performed with great courage and professionalism, averting a potentially greater loss of life. Recognizing that there were many lessons to be shared and learned from this incident, the OPD asked the COPS Office to conduct a Critical Incident Review of the attack. This Police Foundation report on the incident review details multiple aspects of the attack and response, including leadership, collaboration, tactics, equipment, training, emergency medical care, officer safety, public information, and community relationships. In so doing, it identifies best practices for planning, training, and procedures in all areas of response to a similar attack or mass casualty event and can serve as a valuable guide to law enforcement or first responders seeking to prepare for similar incidents.

This two-in one resource includes the Tactical Commanders and Staff Toolkit plus the Liaison Officer Toolkit. Defense Support of Civil Authorities (DSCA)) enables tactical level Commanders and their Staffs to properly plan and execute assigned DSCA missions for all hazard operations, excluding Chemical, Biological, Radiological, Nuclear, high yield Explosives (CBRNE) or acts of terrorism. Applies to all United States military forces, including Department of Defense (DOD) components (Active and Reserve forces and National Guard when in Federal Status). This hand-on resource also may be useful information for local and state first responders. Chapter 1 contains background information relative to Defense Support of Civil Authorities (DSCA) including legal, doctrinal, and policy issues. Chapter 2 provides an overview of the incident management processes including National Response Framework (NRF), National Incident Management Systems (NIMS), and Incident Command System (ICS) as well as Department of Homeland Security (DHS). Chapter 3 discusses the civilian and military responses to natural disaster. Chapter 4 provides a brief overview of Joint Operation Planning Process and mission analysis. Chapter 5 covers Defense Support of Civil Authorities (DSCA) planning factors for response to all hazard events. Chapter 6 is review of safety and operational composite risk management processes Chapters 7-11 contain Concepts of Operation (CONOPS) and details five natural hazards/disasters and the pertinent planning factors for each within the scope of DSCA.

The book also contains information on current issues and trends such as the effects of the recent recession and new technologies that affect strategic communication management. A review of internal and employee communication issues, the growing need for international and multicultural communication, and strategies for combining traditional and social media are explored in detail. Whether you are a professional communicator or a corporate executive without a background in the communication discipline, you will gain new insight into traditional and emerging issues in organizational communication and learn what it takes to reach stakeholders both inside and outside the organization.

Rescue, Response, and Resilience: a Critical Incident Review of the Orlando Public Safety Response to the Attack on the Pulse Nightclub

The second edition of this textbook is a study about the relation between EU law and national public law. Familiar EU doctrines - on procedural autonomy, direct effect, consistent interpretation, ex officio application of European law, and state liability - are used as a starting point for examining the effects of these doctrines in the various Member States. Consideration is also given to important questions concerning the enforcement of EU law in the national legal order, the organization of the judiciary, and the influence of EU law on fundamental principles of (public) law, such as legal certainty, non-discrimination, and proportionality. The book is particularly designed for advanced bachelors and masters courses on the relation between national law and EU law. Because of the many examples of national case law, the book will be most welcome to any practitioner dealing with European law in a national context. [Subject: European Law, Public Law]

DSCA Handbook

A strong challenge to traditional Human Resource Development. Internationally renowned authors address HRD presenting multifaceted alternative perspectives to the current practice and theory of HRD.

What do peasants do in the face of severe food crisis and ecological stress, and how do they manage to survive on their own? This study revolves around a case study conducted by the author in the awraja (district) in the Ambassel Wollo province in northeastern Ethiopia. This is in the region that was hit hardest by the 1984-85 famine, which Rahmato calls "the worst tragedy rural Ethiopia had ever experienced". The author also critically examines other literature on famine response. The focus of this study is on what happens before famine comes, and how the peasants prepare for it. From a wealth of evidence, the author concludes that the seeds of famine are sown during the years of recovery.

100 Atmospheres is an invitation to think differently. Through speculative, poetic, and provocative texts, thirteen writers and artists have come together to reflect on human relationships with other species and the planet.

Philosophy

CMH Publication 70-56-1. This study describes how the United States Army, Europe (USAREUR), under the command of General Crosbie E. Saint, supported the armed response of the United States and the United Nations to Iraq's August 1990 invasion of Kuwait at the very time it was managing a fundamental transition in its fifty-year history of defending Central Europe. Discusses the complicated planning for the deployment and the rapid-fire implementation.

Sailing Made Easy is the first step in a voyage that will last you the rest of your life. It is a gift from a group of dedicated sailing professionals who have committed their lives to sharing their art, their skill, and their passion for this wonderful activity. This book, which Sailing Magazine called "best in class" upon its release in 2010, is the most comprehensive education and boating safety learn-to-sail guide to date. It is also the official textbook for the ASA Basic Keelboat Standard (ASA 101). Incorporated in the textbook are useful illustrations and exceptional photographs of complex sailing concepts. The text's most distinguishing feature is its user friendly "spreads" in which instructional topics are self-contained on opposing pages throughout the book. There are also chapter end quizzes and a glossary to help those new to sailing to navigate their way through the extensive nautical terminology.

HRD in a Complex World

This Dictionary covers information and communication technology (ICT), including hardware and software; information networks, including the Internet and the World Wide Web; automatic control; and ICT-related computer-aided fields. The Dictionary also lists abbreviated names of relevant organizations, conferences, symposia and workshops. This reference is important for all practitioners and users

in the areas mentioned above, and those who consult or write technical material. This Second Edition contains 10,000 new entries, for a total of 33,000.

The challenge of housing is increasingly recognised in international policy discussions in connection to the processes of migration, climate change, and economic globalisation. This book addresses the challenges of housing and emerging solutions along the lines of three major dynamics: migration, climate change, and neo-liberalism. It explores the outcomes of neo-liberal »enabling« ideas, responses to extreme climate events with different housing approaches, and how the dynamics of migration reshape the urban housing provision in a changing world. The aim is to contextualise the theoretical discourses by reflecting on the case study context of the eleven papers published in this book. With forewords by Raquel Rolnik (University Sao Paulo) and Mohammed El Sioufi (UN-Habitat).

Arms & Explosives

This book is an attempt to present under one cover the current state of knowledge concerning the potential lightning effects on aircraft and that means that are available to designers and operators to protect against these effects. The impetus for writing this book springs from two sources- the increased use of nonmetallic materials in the structure of aircraft and the constant trend toward using electronic equipment to handle flight-critical control and navigation function.
