How To Replace A Clutch And Rear Main Seal On A Honda Accord Without Pulling The Frame - How To Replace A Clutch And Rear Main Seal On A Honda Accord Without Pulling The Frame by How to Automotive 123,603 views 4 years ago 37 minutes - Disclaimer Owing to factors beyond the control of How to Automotive/Brian Eslick, it cannot guarantee against unauthorized ...

Take the Airbox Off

Slave Cylinder

Disconnect the Shift Linkage

Speed Sensor

Loosen Up the Lower Support Bracket

Remove the Axle Nuts

Remove the Cotter Pin from the Ball Joint

Getting the Axle Out

Transmission Jack

Remove the Pressure Plate

Unbolt the Flywheel
Get to Rear Main Seal Out
Prep the Seal
Remove the Old Pilot Bearing
Reinstall the Clip
Fork and Pilot Bearing Are Installed
Prep the Flywheel
To Bolt the Flywheel Back up to the Crank
Install the Clutch Disk
Stab the Transmission Back in
Engine Mounts

If It Doesn't Quite Line Up with the Holes on the on the Castle Nut You Can Rotate a Little Tighter To Get It To Line Up so We'Re GonNa Do that for both Sides Then We'Re GonNa Start the Axle Nuts and Run Them In until They'Re Snug We'Re Not Going to Torque Them Down Just Yet We'Re GonNa Put the Wheel on after that So at this Point You Should Have both Left and Right Side Suspension Pretty Much Bolted Up Together Now What I'M Going To Do Is Pop the Center Cap out of the Wheels Here and the Reason Why We'Re Going To Do that Is We'Re Going to Torque the Lug Nut through the Center Up to that Hole

We'Re Not Going to Torque Them Down Just Yet We'Re GonNa Put the Wheel on after that So at this Point You Should Have both Left and Right Side Suspension Pretty Much Bolted Up Together Now What I'M Going To Do Is Pop the Center Cap out of the Wheels Here and the Reason Why We'Re Going To Do that Is We'Re Going to Torque the Lug Nut through the Center Up to that Hole So I Put the Wheel on Torque It Down to 87 Foot-Pounds

What I'M Going To Do Is Pop the Center Cap out of the Wheels Here and the Reason Why We'Re Going To Do that Is We'Re Going to Torque the Lug Nut through the Center Up to that Hole So I Put the Wheel on Torque It Down to 87 Foot-Pounds once the Wheel Was Torque Then I Put a Socket through the Hole of the Rim and Torque It down the Axle Nut Down to 181 Foot-Pounds so as You Can Tell I Have the Wheel Touching the Ground I Also Have My Hammer Rolled Up under Kind of Action like a Wheel Chock They Prevent the Car from Rolling Now We Need To Smash the Axle Nut in on this Little Groove Here To Prevent It from Rotating Back Off and You Just Use a Punch To Do that once You've Got that Done You Can Take the Center Cap and Go Ahead and Push It Back on to the the Wheel

So as You Can Tell I Have the Wheel Touching the Ground I Also Have My Hammer Rolled Up under Kind of Action like a Wheel Chock They Prevent the Car from Rolling Now We Need To Smash the Axle Nut in on this Little Groove Here To Prevent It from Rotating Back Off and You Just Use a Punch To Do that once You've Got that Done You Can Take the Center Cap and Go Ahead and Push It Back on to the the Wheel Here

We Need To Smash the Axle Nut in on this Little Groove Here To Prevent It from Rotating Back Off and You Just Use a Punch To Do that once You've Got that Done You Can Take the Center Cap and Go Ahead and Push It Back on to the the Wheel Here so You'Re Going To Do that Same Process for the Driver Side Also So Now We'Re Ready To Go Ahead and Put the Starter Back In so You Go Ahead and Line It Up and Push It In until It's Fully Seated and Then You'Re GonNa Start the 14 Millimeter Bolts on Top and the 17 Millimeter on the Bottom I Also Recommend Starting both of these Bolts by Hand and Then if You Disconnected the Knock Sensor or Took the Knock Sensor Out because You May Have May Have Been in Your Way You Can Go Ahead and Put that in Also Now We'Re Ready To Put the Intake Back on or the Plenum Back on I'M Going To Reuse the Gasket on You Could Reuse Them They'Re Made out of Metal if It's in Bad Shape I Recommend You Replace It but So Go Ahead and Push the Plenum Back into Position Line It Up with the Studs on the on the Inner Portion of the Intake Here and Then once this Then You Can Go Ahead and Start the Fasteners Holding It Down So I Started All the Bolts by Hand the Two Nuts and the Three Bolts on the Bottom There once that's Done I Will Fall Down the to the Bracket Down Here and Start at the Bracket Here I Make Sure the Everything's Still Loose

I Started All the Bolts by Hand the Two Nuts and the Three Bolts on the Bottom There once that's Done I Will Fall Down the to the Bracket Down Here and Start at the Bracket Here I Make Sure the Everything's Still Loose and Started Everything by Hand once You Got this Started Then You Can Go Ahead and Tighten the Bottom Bolt Bracket Down Here You Can Go Ahead and Tighten that Down and once that's Tightened Down Then We'LI Torque down the Upper Portion of It

Once You Got this Started Then You Can Go Ahead and Tighten the Bottom Bolt Bracket Down Here You Can Go Ahead and Tighten that Down and once that's Tightened Down Then We'LI Torque down

the Upper Portion of It so We'Re GonNa Start in the Middle Here and We'Re GonNa Torque this down to 16 Foot-Pounds and We'Re GonNa Work in a Crisscross Pattern Just like a Star Pattern and Go Out Work Back and Forth until all of Them Are Torqued down to 16 Foot-Pounds Now if You Unplug any of the Injectors or Anything To Get More Slack in It Go Ahead and Plug all That Back in I'M I Pulled the Wire Loom Off So I'M Putting the Wire Loom Holder Back Down

So We'Re GonNa Start in the Middle Here and We'Re GonNa Torque this down to 16 Foot-Pounds and We'Re GonNa Work in a Crisscross Pattern Just like a Star Pattern and Go Out Work Back and Forth until all of Them Are Torqued down to 16 Foot-Pounds Now if You Unplug any of the Injectors or Anything To Get More Slack in It Go Ahead and Plug all That Back in I'M I Pulled the Wire Loom Off So I'M Putting the Wire Loom Holder Back Down Make Sure the Injectors Are Plugged Back In and I Need the Vent Hoses That You May Have Taken Off Go Ahead and Reconnect All that

Now if You Unplug any of the Injectors or Anything To Get More Slack in It Go Ahead and Plug all That Back in I'M I Pulled the Wire Loom Off So I'M Putting the Wire Loom Holder Back Down Make Sure the Injectors Are Plugged Back In and I Need the Vent Hoses That You May Have Taken Off Go Ahead and Reconnect all That Now So Now You Want To Double Check that Everything Is Hooked Up Right Here with It We Touched in this Area and once that's all Secured Then We Can Go Ahead and Take the Top Engine Cover and Put that On

So Now You Want To Double Check that Everything Is Hooked Up Right Here with It We Touched in this Area and once that's all Secured Then We Can Go Ahead and Take the Top Engine Cover and Put that on Now It's Time To Fill the Transmission Back Up with Fluid Right Back Here on the Back Is a 17 Millimeter Nut We'Re Going To Remove this and this Is the Fill Plug so We'Re GonNa Fill this Up with One and a Half Quarts

Right Back Here on the Back Is a 17 Millimeter Nut We'Re Going To Remove this and this Is the Fill Plug so We'Re GonNa Fill this Up with One and a Half Quarts That's all It's Recommended When You Drain the Transmission Is One and a Half Quarts So Go Ahead and Pour One and a Half Quarts of the Honda Approved Transmission Fluid into It Now You Can Torque the Fill Plug Down to 33 Foot-Pounds so Now We'Re GonNa Take the Long Bolt That Went through the Engine Mount Back Here or the Transmission Mount and Go Ahead and Start that in the Very Back of the Transmission You Can Torque the Fill Plug Down to 33 Foot-Pounds so Now We'Re GonNa Take the Long Bolt That Went through the Engine Mount Back Here or the Transmission Mount and Go Ahead and Start that in the Very Back of the Transmission Back Here

So Now We'Re GonNa Take the Long Bolt That Went through the Engine Mount Back Here or the Transmission Mount and Go Ahead and Start that in the Very Back of the Transmission Back Here once You Got that Bolt Started You Can Go Ahead and Tighten this Down I Used To Flex Head Ratchet To Get this You'Re Probably Not GonNa Be Able To Get a Torque Wrench Back There the Proper Angle To Get It in There So I Would Just Recommend Tightening It Down Now You Can Take the Two Bolts That Are on the Top of the Bell Housing Here and Start those the Seventeen Millimeter Ones Go Ahead and Start both of these and Run those in until They'Re Snug

You Can Take the Two Bolts That Are on the Top of the Bell Housing Here and Start those the Seventeen Millimeter Ones Go Ahead and Start both of these and Run those in until They'Re Snug once You Have both of Them Run In until They'Re Snug Then You Can Switch Over to a Torque Wrench and Torque Them Down to Four Seven Foot-Pounds so Now We'Re Going To Start at the Back of the Transmission and We'Re Going to Re Secure the Wire Loom Here with the Bracket Once You Have both of Them Run In until They'Re Snug Then You Can Switch Over to a Torque Wrench and Torque Them Down to Four Seven Foot-Pounds so Now We'Re Going To Start at the Back of the Transmission and We'Re Going to Re Secure the Wire Loom Here with the Bracket so We'Re Going To Bolt that Up Right Here once that's Bolted Up We'Re Going To Follow It Back and Then We'Re GonNa Bolt the 12 Millimeter Bolt Here That Held on the Bracket Here and Then We'LI Follow It around and underneath the Shift Linkage Just another Bracket Here with Two Ten Millimeter Bolts We'Re GonNa Bolt those all Up and Then We'Re Going To Plug in the the Speed Sensor Down below the Battery Tray

So Now We'Re Going To Start at the Back of the Transmission and We'Re Going to Re Secure the Wire Loom Here with the Bracket so We'Re Going To Bolt that Up Right Here once that's Bolted Up We'Re Going To Follow It Back and Then We'Re GonNa Bolt the 12 Millimeter Bolt Here That Held on the Bracket Here and Then We'LI Follow It around and underneath the Shift Linkage Just another Bracket Here with Two Ten Millimeter Bolts We'Re GonNa Bolt those all Up and Then We'Re Going To Plug in the the Speed Sensor Down below the Battery Tray Here

Once that's Bolted Up We'Re Going To Follow It Back and Then We'Re GonNa Bolt the 12 Millimeter Bolt Here That Held on the Bracket Here and Then We'LI Follow It around and underneath the Shift

Linkage Just another Bracket Here with Two Ten Millimeter Bolts We'Re GonNa Bolt those all Up and Then We'Re Going To Plug in the the Speed Sensor Down below the Battery Tray Here Then There'LI Be One More Electrical Connection on Connector on the Bell Housing Here We'LI Go Ahead and Plug that One in Now We'Re Going To Take the Top Mount Here and Go Ahead and Position That Back into Place Start All the Bolts and Tighten those all Down and Then When You Put this Bracket You'Re GonNa Make Sure that the Plastic Portion Is Facing Upwards like this so that's Where the Hydraulic Line Mounts Through So Go Ahead and Bolt All this Up

Put this Bracket You'Re GonNa Make Sure that the Plastic Portion Is Facing Upwards like this so that's Where the Hydraulic Line Mounts Through So Go Ahead and Bolt All this Up once that's all Bolted Up Now We'Re GonNa Work on the Hydraulic Line so We'Re GonNa Start Back Here in the Back and Mount the Ten Millimeter Bolt Back Here and Tighten that Up Then We'LI Take the the Slave Cylinder Here and and Hook It into the Fork and as You Hook It into the Fork

So We'Re GonNa Start Back Here in the Back and Mount the Ten Millimeter Bolt Back Here and Tighten that Up Then We'LI Take the the Slave Cylinder Here and and Hook It into the Fork and as You Hook It into the Fork Press the Rod into the Fork and Also Back Up inside the Slave Cylinder So When You Do this We Didn't Open the Bleeder System so We Should Not Have To Believe this Afterwards so We'Re I Lined It Up and Then Pulled It into Position and once It's Pulled into Position You Can Start the Two Bolts and Tighten those

That Down once those Are all Bolted down Then We'LI Start the Hook Them Up through the Linkage You Put the Cotter Pins Back in So When You Put these on There Should Be a Nylon Washer Put that on First and Then the Metal Washer Then a New Cotter Pin through and Just Bend Them Over Now that the Shift Linkage Just Hooked Up You Can Go Ahead and Put the Lower Airbox in Place and Start the Two Bolts in the Corners and Then Put the Wire Loom at the End of the Airbox Reconnect that Now We Can Take the Plastic Tray That Went underneath the Battery and Go Ahead and Reinstall that and Clip the Battery Cables Back into the Little Clips

Now We Can Take the Top Engine Cleaner Portion of the Air Cleaner and Put It On and Start the Bolts Plug in the Vent Lines Plug in the Mass Air Make Sure that these Ports Here Are Plugged In and Tighten Up the Clamp around the Throttle Body Now You Can Go Ahead and Install the Battery Battery Hold Downs and Cables and Tighten those all Up Now I'M GonNa Suck the Fluid out of the Reservoir and Put Fresh Hydraulic Fluid in It and Then Top It Off and Now after that We'Re GonNa Just Double Check the the Clutch Pedal and Make Sure We Got a Nice Firm Pedal

Now You Can Go Ahead and Install the Battery Battery Hold Downs and Cables and Tighten those all Up Now I'M GonNa Suck the Fluid out of the Reservoir and Put Fresh Hydraulic Fluid in It and Then Top It Off and Now after that We'Re GonNa Just Double Check the the Clutch Pedal and Make Sure We Got a Nice Firm Pedal So after Pumping the Pedal if It's Not Firm

1990-2002 Honda Accord 1997-1999 Acura CL Complete Clutch Replacement VManual (Trailer) - 1990-2002 Honda Accord 1997-1999 Acura CL Complete Clutch Replacement VManual (Trailer) by EricTheCarGuy 84,311 views 9 years ago 1 minute, 35 seconds - This VManual covers the complete step by step, fastener by fastener **replacement**, of the clutch, pressure plate, and throwout ...
