Order of Draw

Perform a Venipuncture Collect a Venous Blood Sample Using the Vacuum Tube Method - Perform a Venipuncture Collect a Venous Blood Sample Using the Vacuum Tube Method by Allied Health

63,545 views 3 years ago 6 minutes, 10 seconds

Read the provider's order and clarify any questions

Gather appropriate tubes

Put on a fluid-impermeable lab coat

Introduce yourself

Confirm the patient's identity

Explain the procedure

Put on protective eyewear

Sanitize your hands

Ask the patient if she has a preference which arm is used

Have the patient sit with her arm well-supported and downward

Apply the tourniquet 3-4 inches above the elbow

Select the site by palpating the antecubital space

Use an index finger to trace the path and judge depth

Remove the tourniquet

Cleanse the site in a circular motion

Assemble the equipment on your non-dominant side

Attach the needle to the vacuum tube holder

Keep the cover on

Reapply the tourniquet when the alcohol is dry

Hold the assembly in your dominant hand, thumb on top and fingers underneath

Remove the needle cover

Grasp the patient's arm with your non-dominant hand

Stretch the skin downward below the collection site with your thumb

With the bevel up and the needle parallel to the vein, insert at a 15-20 degree angle

Hold the assembly in place

Place two fingers on the flanges of the needle holder

Use your thumb to push the tube onto the needle

Allow the tube to fill to capacity

Curl your fingers underneath and push the needle holder with your thumb

Do not move the needle when removing the tube

Immediately invert the tube to mix

Insert the second tube

Continue filling until the requisition is filled

Invert each tube

As the last tube begins filling, release the tourniquet

Place the gauze or cotton ball over the puncture site

Quickly remove the needle

Discard the entire needle and holder assembly

Apply pressure or instruct the patient to do so

The patient may elevate her arm but not bend her elbow

Check that the bleeding has stopped

Apply a wrap, gauze and tape, or a bandage

Dispose of contaminated materials

Disinfect the work area

Remove and dispose of your gloves

Remove protective eyewear

Complete a laboratory requisition form

Document the procedure
