www.cdc.gov/ticks

Avoid wooded and brushy areas with high grass and leaf litter

Check entire body for ticks after coming indoors.

Pick a location in your yard for a meeting spot to lay out all the items your child finds.

With sidewalk chalk, write the numbers 1-10 vertically on a paved surface.

At the meeting spot, lay items in a row below the first item found.

Before the hunt begins, discuss expectations to follow with your child.

Establish search boundaries within your yard.

Define off-limit areas to avoid such as poison ivy or high grass.

Explain what can and cannot be collected.

To avoid hazards, use a stick to move materials.

Ask child to remain within eyesight of an adult.

Set expectations according to your individual child and yard.

Upon completion, congratulate your child.

Extend activity by asking questions.

North Carolina's Wild Piedmont

The American South is famous for its astonishingly rich biodiversity. In this book, Georgann Eubanks takes a wondrous trek from Alabama to North Carolina to search out native plants that are endangered and wavering on the edge of erasure. Even as she reveals the intricate beauty and biology of the South's plant life, she also shows how local development and global climate change are threatening many species, some of which have been graduated to the federal list of endangered species. Why should we care, Eubanks asks, about North Carolina's Yadkin River goldenrod, found only in one place on earth? Or the Alabama canebrake pitcher plant, a carnivorous marvel being decimated by criminal poaching and a booming black market? These plants, she argues, are important not only to the natural environment but also to southern identity, and she finds her inspiration in talking with the heroes the botanists, advocates, and conservationists young and old on a quest to save these green gifts of the South for future generations. These passionate plant lovers caution all of us not to take for granted the sensitive ecosystems that contribute to the region's long-standing appeal, beauty, and character.

Wildlife in North Carolina

Excerpt from *Wildlife in North Carolina*, Vol. 12: The Official Publication of the North Carolina Wildlife Resources Commission, Raleigh; December, 1948 Plans have been made and some progress achieved toward the institution of a comprehensive wild turkey restoration program in our State. The current method of procedure calls for the establishment of a system of managed wildlife refuges Within large forested tracts that are Well distributed in the State.. These refuges will be intensively managed so as to expedite the annual increment to the wild. Turkey population and thus hasten the development of a sufficient density of turkeys throughout the surrounding territories to permit hunting in a minimum of time. The [initial refuge units have been selected with this goal in prospect: to gain better distribution of this excellent game bird, and to improve hunting conditions for the greatest number of sportsmen. As the program develops, the number of tracts under management will be increased. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. The Case of the Wild Onions: The Impact of Ramps on Cherokee Rights (an article from *Southern Cultures* 18:2, Summer 2012: The Special Issue on Food)

Wildlife in North Carolina, Vol. 12

A headstrong girl. A stray cat. A wild boy. A man who plays with fire. Eleven-year-old Zoë trusts no one. Her father left before she was born. At the death of her irresponsible mother, Zoë goes to live with her uncle, former surgeon and famed metal sculptor Dr. Henry Royster. She's sure Henry will fail her as everyone else has. Reclusive since his wife's death, Henry takes Zoë to Sugar Hill, North Carolina, where he welds sculptures as stormy as his moods. Zoë and Henry have much in common: brains, fiery and creative natures, and badly broken hearts. Zoë confronts small-town prejudice with a quick temper. She warms to Henry's odd but devoted friends, meets a mysterious teenage boy living wild in the neighboring woods, and works to win the trust of a feral cat while struggling to trust in anyone herself. In this ALA Notable Children's Book and Kirkus Reviews Best Children's Book of the Year, Zoë's questing spirit leads her to uncover the wild boy's identity, lay bare a local lie, and begin to understand the true power of Henry's art. Then one decisive night, she and the boy risk everything in a reckless act of heroism.

The Wild Boar in North Carolina

Health figures centrally in late twentieth-century environmental activism. There are many competing claims about the health of ecosystems, the health of the planet, and the health of humans, yet there is little agreement among the likes of D.C. lobbyists, grassroots organizers, eco-anarchist collectives, and science-based advocacy organizations about whose health matters most, or what health even means. In this book, Jennifer Thomson untangles the complex web of political, social, and intellectual developments that gave rise to the multiplicity of claims and concerns about environmental health. Thomson traces four strands of activism from the 1970s to the present: the environmental lobby, environmental justice groups, radical environmentalism and bioregionalism, and climate justice activism. By focusing on health, environmentalists were empowered to intervene in the rise of neoliberalism, the erosion of the regulatory state, and the decimation of mass-based progressive politics. Yet, as this book reveals, an individualist definition of health ultimately won out over more communal understandings. Considering this turn from collective solidarity toward individual health helps explain the near paralysis of collective action in the face of planetary disaster.

In this stunning book, nature photographer and ecologist David Blevins offers an inspiring visual journey to North Carolina's barrier islands as you have never seen them before. These islands are unique and ever-changing places with epic origins, surprising plants and animals, and an uncertain future. From snow geese midflight to breathtaking vistas along otherworldly dunes, Blevins has captured the incredible natural diversity of North Carolina's coast in singular detail. His photographs and words reveal the natural character of these islands, the forces that shape them, and the sense of wonder they inspire. Featuring over 150 full-color images from Currituck Banks, the Cape Hatteras and Cape Lookout National Seashores, and the islands of the southern coast, North Carolina's Barrier Islands is not only a collection of beautiful images of landscapes, plants, and animals but also an appeal for their conservation.

Wildlife in North Carolina, Vol. 13

Excerpt from *Wildlife in North Carolina, Vol. 13*: May 1949 I am convinced that the annual turn - over of pheasants and of quail is certainly no less than that for waterfowl. The turn - over of our small upland game and fish is probably much greater than that for waterfowl. This should give us food for thought in any stock ing program. It certainly suggests that even if the stocked game or fish were as capable of

surviving in the wild as the wild stock (and obviously the stocked forms are not as capable), and even if the environment is favorable (and frequently it is not), even then not less than 70 per cent of the game stocked will perish during the first year! It seems to me that this should suggest to any intelligent worker that if he is thinking beyond the present - if he is concerned with population dynamics of game for next year, and for the future - he should do something more basic and fundamental than merely to dump quail, pheasants, or rabbits on a farmer's field and hope they will all reproduce to the extent of their maximum biological potential. The Case of the Wild Onions: The Impact of Ramps on Cherokee Rights

Red wolves are shy, elusive, and misunderstood predators. Until the 1800s, they were common in the longleaf pine savannas and deciduous forests of the southeastern United States. However, habitat degradation, persecution, and interbreeding with the coyote nearly annihilated them. Today, reintroduced red wolves are found only in peninsular northeastern North Carolina within less than 1 percent of their former range. In *The Secret World of Red Wolves*, nature writer T. DeLene Beeland shadows the U.S. Fish and Wildlife Service's pioneering recovery program over the course of a year to craft an intimate portrait of the red wolf, its history, and its restoration. Her engaging exploration of this top-level predator traces the intense effort of conservation personnel to save a species that has slipped to the verge of extinction. Beeland weaves together the voices of scientists, conservationists, and local landowners while posing larger questions about human coexistence with red wolves, our understanding of what defines this animal as a distinct species, and how climate change may swamp its current habitat.

During the nineteenth century, Britain maintained a complex network of garrisons to manage its global empire. While these bases helped the British project power and secure trade routes, they served more than just a strategic purpose. During their tours abroad, many British officers engaged in formal and informal scientific research. In this ambitious history of ornithology and empire, Kirsten A. Greer tracks British officers as they moved around the world, just as migratory birds traversed borders from season to season. Greer examines the lives, writings, and collections of a number of ornithologist-officers, arguing that the transnational encounters between military men and birds simultaneously shaped military strategy, ideas about race and masculinity, and conceptions of the British Empire. Collecting specimens and tracking migratory bird patterns enabled these men to map the British Empire and the world and therefore to exert imagined control over it. Through its examination of the influence of bird watching on military science and soldiers' contributions to ornithology, *Red Coats and Wild Birds* remaps empire, nature, and scientific inquiry in the nineteenth-century world.

North Carolina's Barrier Islands

Excerpt from *Wildlife in North Carolina*, Vol. 12: January 1948 With the arrival of the New Year, hunters moved into the fag end of the 1947-48 season in North Carolina. New Year's Day brought the close of the seasons for deer, bear, squirrel, and European wild boar. It also was the final day of wild turkey hunting in eleven of the twenty-one counties which had an open season on the big birds this year. In the other counties, the final day will be January 15. North Carolina Wildlife Viewing Guide

In 1947, 4,000 motorcycle hobbyists converged on Hollister, California. As images of dissolute bikers graced the pages of newspapers and magazines, the three-day gathering sparked the growth of a new subculture while also touching off national alarm. In the years that followed, the stereotypical leather-clad biker emerged in the American consciousness as a menace to law-abiding motorists and small towns. Yet a few short decades later, the motorcyclist, once menacing, became mainstream. To understand this shift, Randy D. McBee narrates the evolution of motorcycle culture since World War II. Along the way he examines the rebelliousness of early riders of the 1940s and 1950s, riders' increasing connection to violence and the counterculture in the 1960s and 1970s, the rich urban bikers of the 1990s and 2000s, and the factors that gave rise to a motorcycle rights movement. McBee's fascinating narrative of motorcycling's past and present reveals the biker as a crucial character in twentieth-century American life.

"From the Miccosukee gooseberry to the Florida torreyia, the twelve plants starring in *The wild South* are native to the American South, a place known for its astonishingly rich biodiversity. Georgann Eubanks treks across the region, from Alabama to North Carolina, reporting on their wondrous biology. But these plants are in dire trouble-each one is struggling to survive against the effects of global climate change and disruptive development. Ten of them have already been granted federally endangered status"--

Nature's Ways

In this richly illustrated love letter to the wild places and natural wonders of North Carolina, Tom Earnhardt, writer and host of UNC-TV's Exploring North Carolina and lifelong conservationist, seamlessly ties deep geological time and forgotten species from our distant past to the unparalleled biodiversity of today. With varied topography and a climate that is simultaneously subtropical, temperate, and subarctic, he shows that North Carolina is a meeting place for living things more commonly found far to the north and south. Highlighting the ways in which the state is a unique ecological crossroads, Earnhardt's research, insightful writing, and stunning photography will both teach and inspire. Crossroads of the Natural World invites readers to engage a variety of topics, including the impacts of invasive species, the importance of forested buffers along our rivers, the role of naturalists, and the challenges facing the state in a time of climate change and sea-level rise. By sharing his own journey of more than sixty years, Earnhardt entices North Carolinians of every age to explore the natural diversity of our state.

Excerpt from Wildlife in North Carolina, Vol. 30: January, 1966 I'm positive, too, that the blessings of the outdoors are just as effective for keeping all ages on an even keel mentally. In this age of stress and strain, American people each year consume 11 million pounds of aspirin, 17 billion sleeping pills and so many tranquilizer pills that it's impossible to keep up with the changing figures, in an effort to ease their psychological problems. This hardly sounds as if we were living well-adjusted, care-free lives, does it? Doctors spend countless hours consulting with patients with nothing more seriously wrong than self-induced aches, pains and anguish. The solitude of forest or stream, the relaxation of casting a fly over a trout, the honking of wild geese in the sky all serve as soothing sedatives to frayed nerves and weary minds. A noted Philadelphia physician, Dr. Raymond West, recently made the statement that he firmly believes that the United States could dispense with the services of doctors if people would fully utilize the blessings found close to nature.
