A patient who was given insulin in the morning is pale and sweaty and appears confused two hours later. It would be helpful to find out whether the patient.

A resident with an ileostomy evacuates feces through the

To obtain the most accurate patient weight, the nursing assistant should weigh the patient

Normal urine color is

The safest way to confirm a resident's identity is

Signs and symptoms of shock may include

The charge nurse has asked you to take Mrs. Shumway's vital signs. You know you must first

Before performing any procedure, a nurse aide must

To help ensure adequate circulation to prevent skin breakdown, you could

A patient complains that her hand hurts where the IV is running. The nurse assistant notices that the hand is puffy. The best thing to do is

To take a rectal temperature, the nurse aide should insert the thermometer and

Mrs. Shumway has an order for 180. You have picked up her breakfast and note she drank half of a 6oz. glass of juice, 4oz. of milk, and 8oz. of coffee, you document

Who can order a warm or cold application?

A nurse aide notices blood in a patient's IV tubing. The aide should

Mrs. Hernandez had a hip replacement and is admitted to the long-term care facility for rehabilitation. Her condition is considered

A patient has a diagnosis of psoriasis. Her nurse aide should

A nurse assistant notices red marks on a resident's back and buttocks. The aide acts in the knowledge that

The brain is part of the

Most of our calories should come from

Your resident consumed a bowl of soup that was 180 cc of liquid. How

Which of the following measurements that you obtained from Mrs. Shumway should be reported immediately to the charge nurse?

Continuing education is

Which of the following statements about blindness are false?

When caring for a resident with an indwelling Foley catheter, you should

Which of the following is the safest way to confirm a resident's identity?

A professional and safe working appearance would include which of the following?

Drainage bags from urinary catheters should always

Meal trays have arrived. Before serving each tray, the nurse aide should

What is the best way to keep a skilled nursing facility from having an unpleasant odor?

Another term for decubitus ulcer is

All of these might be used in dealing with contractures except

A resident has the following symptoms: dizziness, feeling faint, blood pressure below 90/60 and cold, sweaty skin. The resident is most likely suffering from

Which of these treatments would be best to decrease swelling?

When having a conversation with a dysphasic patient (someone who has trouble speaking), it is important not to

Which of these would most likely be used to protect a resident from inflicting immediate harm to themselves in a care facility setting?

Which statement is incorrect regarding the Heimlich maneuver?

Which of these is not true when taking a blood pressure reading?

To avoid pulling the catheter when turning a patient, the catheter tube should be taped to the patients

Which medical term is often used for burping, belching and passing

Which of these is incorrect in reference to wearing gloves?

Why is an axillary reading generally lower than the other forms of taking a temperature?

The normal pulse rate for an adult is 60-100 beats per minute. The normal pulse rate for children is

Which of these applies to proper hand washing procedures?

Which of these is the least likely to signal impending death?

Why is taking a residents oral temperature the most common means of obtaining a reading?

A resident is supposed to have 240 milliliters of juice every 2 hours.

Which of these tasks related to intravenous therapy is in the scope of responsibilities for a nursing assistant?

The most appropriate nursing order for a patient who develops dyspnea and shortness of breath

would be...

The nurse observes that Mr. Adams begins to have increased difficulty breathing. She elevates the head of the bed to the high Fowler position, which decreases his respiratory distress. The nurse documents this breathing as

The physician orders a platelet count to be performed on Mrs. Smith after breakfast. The nurse is responsible for

Answer: C. A platelet count evaluates the number of platelets in the circulating blood volume.

The nurse is responsible for giving the patient breakfast at the scheduled time. The physician is responsible for instructing the patient about the test and for writing the order for the test.

Mrs. Mitchell has been given a copy of her diet. The nurse discusses the foods allowed on a 500-mg low sodium diet. These include

Answer: B. Mashed potatoes and broiled chicken are low in natural sodium chloride. Ham, olives, and chicken bouillon contain large amounts of sodium and are contraindicated on a low sodium diet.

The physician orders a maintenance dose of 5,000 units of subcutaneous heparin (an anticoagulant) daily. Nursing responsibilities for Mrs. Mitchell now include

The four main concepts common to nursing that appear in each of the current conceptual models are

Answer: D. The focus concepts that have been accepted by all theorists as the focus of nursing practice from the time of Florence Nightingale include the person receiving nursing care, his environment, his health on the health illness continuum, and the nursing actions necessary to meet his needs.

In Maslow's hierarchy of physiologic needs, the human need of greatest priority is

Answer: D. Maslow, who defined a need as a satisfaction whose absence causes illness, considered oxygen to be the most important physiologic need; without it, human life could not exist. According to this theory, other physiologic needs (including food, water, elimination, shelter, rest and sleep, activity and temperature regulation) must be met before proceeding to the next hierarchical levels on psychosocial needs.

The family of an accident victim who has been declared brain-dead seems amenable to organ donation. What should the nurse do?

Answer: B. The brain-dead patient's family needs support and reassurance in making a decision about organ donation. Because transplants are done within hours of death, decisions about organ donation must be made as soon as possible. However, the family's concerns must be addressed before members are asked to sign a consent form. The body of an organ donor is available for burial. A new head nurse on a unit is distressed about the poor staffing on the 11 p.m. to 7 a.m. shift. What should she do?

Answer: C. Although a new head nurse should initially spend time observing the unit for its strengths and weakness, she should take action if a problem threatens patient safety. In this case, the supervisor is the resource person to approach.

Which of the following principles of primary nursing has proven the most satisfying to the patient and nurse?

Answer: D. Studies have shown that patients and nurses both respond well to primary nursing care units. Patients feel less anxious and isolated and more secure because they are allowed to participate in planning their own care. Nurses feel personal satisfaction, much of it related to positive feedback from the patients. They also seem to gain a greater sense of achievement and esprit de corps

If nurse administers an injection to a patient who refuses that injection, she has committed

Answer: A. Assault is the unjustifiable attempt or threat to touch or injure another person. Battery is the unlawful touching of another person or the carrying out of threatened physical harm. Thus, any act that a nurse performs on the patient against his will is considered assault and battery

If patient asks the nurse her opinion about a particular physicians and the nurse replies that the physician is incompetent, the nurse could be held liable for

Answer: A. Oral communication that injures an individual's reputation is considered slander. Written communication that does the same is considered libel.

A registered nurse reaches to answer the telephone on a busy pediatric unit, momentarily turning away from a 3 month-old infant she has been weighing. The infant falls off the scale, suffering a skull fracture. The nurse could be charged with

Answer: D. Malpractice is defined as injurious or unprofessional actions that harm another. It involves professional misconduct, such as omission or commission of an act that a reasonable and prudent nurse would or would not do. In this example, the standard of care

Which of the following is an example of nursing malpractice?

Which of the following signs and symptoms would the nurse expect to find when assessing an Asian

patient for postoperative pain following abdominal surgery?

A patient is admitted to the hospital with complaints of nausea, vomiting, diarrhea, and severe abdominal pain. Which of the following would immediately alert the nurse that the patient has bleeding from the GI tract?

The correct sequence for assessing the abdomen is

High-pitched gurgles head over the right lower quadrant are

A patient about to undergo abdominal inspection is best placed in which of the following positions?

For a rectal examination, the patient can be directed to assume which of the following positions?

During a Romberg test, the nurse asks the patient to assume which position?

If a patient's blood pressure is 150/96, his pulse pressure is

A patient is kept off food and fluids for 10 hours before surgery. His oral temperature at 8 a.m. is 99.8 F (37.7 C) This temperature reading probably indicates

Which of the following parameters should be checked when assessing respirations?

A 38-year old patient's vital signs at 8 a.m. are axillary temperature 99.6 F (37.6 C); pulse rate, 88; respiratory rate, 30. Which findings should be reported?

Palpating the midclavicular line is the correct technique for assessing

Answer: D. The apical pulse (the pulse at the apex of the heart) is located on the midclavicular line at the fourth, fifth, or sixth intercostal space. Baseline vital signs include pulse rate, temperature, respiratory rate, and blood pressure. Blood pressure is typically assessed at the antecubital fossa, and respiratory rate is assessed best by observing chest movement with each inspiration and expiration

The absence of which pulse may not be a significant finding when a patient is admitted to the hospital?

Which of the following patients is at greatest risk for developing pressure ulcers?

Answer: B. Pressure ulcers are most likely to develop in patients with impaired mental status, mobility, activity level, nutrition, circulation and bladder or bowel control. Age is also a factor. Thus, the 88-year old incontinent patient who has impaired nutrition (from gastric cancer) and is confined to bed is at greater risk.

The physician orders the administration of high- humidity oxygen by face mask and placement of the patient in a high Fowler's position. After assessing Mrs. Paul, the nurse writes the following nursing diagnosis: Impaired gas exchange related to increased secretions. Which of the following nursing interventions has the greatest potential for improving this situation?

Answer: A. Adequate hydration thins and loosens pulmonary secretions and also helps to replace fluids lost from elevated temperature, diaphoresis, dehydration and dyspnea. High- humidity air and chest physiotherapy help liquefy and mobilize secretions.

Which of the following statement is incorrect about a patient with dysphagia?

To assess the kidney function of a patient with an indwelling urinary (Foley) catheter, the nurse measures his hourly urine output. She should notify the physician if the urine output is

Certain substances increase the amount of urine produced. These include

Answer: A. Fluids containing caffeine have a diuretic effect. Beets and urinary analgesics, such as pyridium, can color urine red. Kaopectate is an anti diarrheal medication.

A male patient who had surgery 2 days ago for head and neck cancer is about to make his first attempt to ambulate outside his room. The nurse notes that he is steady on his feet and that his vision was unaffected by the surgery. Which of the following nursing interventions would be appropriate?

A patient has exacerbation of chronic obstructive pulmonary disease (COPD) manifested by shortness of breath; orthopnea: thick, tenacious secretions; and a dry hacking cough. An appropriate nursing diagnosis would be

Mrs. Lim begins to cry as the nurse discusses hair loss. The best response would be

An additional Vitamin C is required during all of the following periods except

Answer: B. Additional Vitamin C is needed in growth periods, such as infancy and childhood, and during pregnancy to supply demands for fetal growth and maternal tissues. Other conditions requiring extra vitamin C include wound healing, fever, infection and stress.

A prescribed amount of oxygen is needed for a patient with COPD to prevent A. Cardiac arrest related to increased partial pressure of carbon dioxide in arterial blood (PaCO₂) B. Circulatory overload due to hypervolemia C. Respiratory excitement D. Inhibition of the respiratory hypoxic stimulus

Answer: D. Delivery of more than 2 liters of oxygen per minute to a patient with chronic obstructive pulmonary disease (COPD), who is usually in a state of compensated respiratory acidosis (retaining carbon dioxide (CO₂)), can inhibit the hypoxic stimulus for respiration. An increased partial pressure of carbon dioxide in arterial blood (PaCO₂) would not initially result in cardiac arrest. Circulatory

overload and respiratory excitement have no relevance to the question

After 1 week of hospitalization, Mr. Gray develops hypokalemia. Which of the following is the most significant symptom of his disorder?

Which of the following nursing interventions promotes patient safety? A. Asses the patient's ability to ambulate and transfer from a bed to a chair B. Demonstrate the signal system to the patient C. Check to see that the patient is wearing his identification band D. All of the above

Studies have shown that about 40% of patients fall out of bed despite the use of side rails; this has led to which of the following conclusions?

Examples of patients suffering from impaired awareness include all of the following except

Answer: C. A patient who cannot care for himself at home does not necessarily have impaired awareness; he may simply have some degree of immobility.

The most common injury among elderly persons is: A. Atheroscleotic changes in the blood vessels B. Increased incidence of gallbladder disease C. Urinary Tract Infection D. Hip fracture

Answer: D. Hip fracture, the most common injury among elderly persons, usually results from osteoporosis. The other answers are diseases that can occur in the elderly from physiologic changes.

The most common psychogenic disorder among elderly person is

Answer: A. Sleep disturbances, inability to concentrate and decreased appetite are symptoms of depression, the most common psychogenic disorder among elderly persons. Other symptoms include diminished memory, apathy, disinterest in appearance, withdrawal, and irritability. Depression typically begins before the onset of old age and usually is caused by psychosocial, genetic, or biochemical factors

Which of the following vascular system changes results from aging?

Which of the following is the most common cause of dementia among elderly persons?

The nurse's most important legal responsibility after a patient's death in a hospital is

Answer: C. The nurse is legally responsible for labeling the corpse when death occurs in the hospital. She may be involved in obtaining consent for an autopsy or notifying the coroner or medical examiner of a patient's death; however, she is not legally responsible for performing these functions. The attending physician may need information from the nurse to complete the death certificate, but he is responsible for issuing it.

Before rigor mortis occurs, the nurse is responsible for: A. Providing a complete bath and dressing change B. Placing one pillow under the body's head and shoulders C. Removing the body's clothing and wrapping the body in a shroud D. Allowing the body to relax normally

Answer: B. The nurse must place a pillow under the deceased person's head and shoulders to prevent blood from settling in the face and discoloring it. She is required to bathe only soiled areas of the body since the mortician will wash the entire body. Before wrapping the body in a shroud, the nurse places a clean gown on the body and closes the eyes and mouth.

When a patient in the terminal stages of lung cancer begins to exhibit loss of consciousness, a major nursing priority is to

Answer: A. Ensuring the patient's safety is the most essential action at this time. The other nursing actions may be necessary but are not a major priority.

Which element in the circular chain of infection can be eliminated by preserving skin integrity?

Which of the following will probably result in a break in sterile technique for respiratory isolation?

Which of the following patients is at greater risk for contracting an infection?

Effective hand washing requires the use of

Which of the following procedures always requires surgical asepsis?

Answer: B. The urinary system is normally free of microorganisms except at the urinary meatus. Any procedure that involves entering this system must use surgically aseptic measures to maintain a bacteria-free state.

Sterile technique is used whenever

Answer: C. All invasive procedures, including surgery, catheter insertion, and administration of parenteral therapy, require sterile technique to maintain a sterile environment. All equipment must be sterile, and the nurse and the physician must wear sterile gloves and maintain surgical asepsis.

In the operating room, the nurse and

Which of the following constitutes a break in sterile technique while preparing a sterile field for a dressing change?

A natural body defense that plays an active role in preventing infection is

All of the following statement are true about donning sterile gloves except

When removing a contaminated gown, the nurse should be careful that the first thing she touches is the

All of the following measures are recommended to prevent pressure ulcers except

Which of the following blood tests should be performed before a blood transfusion?

The primary purpose of a platelet count is to evaluate the

Answer: A. Platelets are disk-shaped cells that are essential for blood coagulation. A platelet count determines the number of thrombocytes in blood available for promoting hemostasis and assisting with blood coagulation after injury. It also is used to evaluate the patient's potential for bleeding; however, this is not its primary purpose. The normal count ranges from 150,000 to 350,000/mm³. A count of 100,000/mm³ or less indicates a potential for bleeding; count of less than 20,000/mm³ is associated with spontaneous bleeding.

Which of the following white blood cell (WBC) counts clearly indicates leukocytosis?

Which of the following statements about chest X-ray is false?

The most appropriate time for the nurse to obtain a sputum specimen for culture is

Answer: A. Obtaining a sputum specimen early in this morning ensures an adequate supply of bacteria for culturing and decreases the risk of contamination from food or medication.

A patient with no known allergies is to receive penicillin every 6 hours. When administering the medication, the nurse observes a fine rash on the patient's skin. The most appropriate nursing action would be to

The correct method for determining the vastus lateralis site for I.M. injection is to

The appropriate needle size for insulin injection is

The appropriate needle gauge for intradermal injection

The physician orders gr 10 of aspirin for a patient. The equivalent dose in milligrams is

Which of the following is a sign or symptom of a hemolytic reaction to blood transfusion?

Which of the following conditions may require fluid restriction?

All of the following are common signs and symptoms of phlebitis except

Answer: D. Phlebitis, the inflammation of a vein, can be caused by chemical irritants (I.V. solutions or medications), mechanical irritants (the needle or catheter used during venipuncture or cannulation), or a localized allergic reaction to the needle or catheter. Signs and symptoms of phlebitis include

pain or discomfort, edema and heat at the I.V. insertion site, and a red streak going up the arm or leg from the I.V. insertion site.

The best way of determining whether a patient has learned to instill ear medication properly is for the nurse to

Which of the following types of medications can be administered via gastrostomy tube?

A patient who develops hives after receiving an antibiotic is exhibiting drug

A patient has returned to his room after femoral arteriography. All of the following are appropriate nursing interventions except

The nurse explains to a patient that a cough

An infected patient has chills and begins shivering. The best nursing intervention is to

A clinical nurse specialist is a nurse who has

The purpose of increasing urine acidity through dietary means is to

Clay colored stools indicate

In which step of the nursing process would the nurse ask a patient if the medication she administered relieved his pain?

Answer: D. In the evaluation step of the nursing process, the nurse must decide whether the patient has achieved the expected outcome that was identified in the planning phase.

All of the following are good sources of vitamin A except

Which of the following is a primary nursing intervention necessary for all patients with a Foley Catheter in place?

The ELISA test is used to

The two blood vessels most commonly used for TPN infusion are the

Effective skin disinfection before a surgical procedure includes which of the following methods?

Nursing assessment -- Nursing Process -- Fundamental of Nursing by Exam practices for Nursing
3,910 views 2 years ago 23 minutes - by Potter|Perry Stockert|Hall.

Intro

The nurse is using critical thinking skills during the first phase of the nursing process. Which action
indicates the nurse is in the first phase?

She is the first one to coin the term "nursing process" she introduced 3 steps of nursing process which
are observation, ministrations, and validation.

The nurse is gathering data on a patient. Which data will the nurse report as objective data?

A patient expresses fear of going home and being alone. Vital signs are stable and the incision is
nearly completely healed. What can the nurse infer from the subjective data?

A nurse is gathering information about a patient's habits and lifestyle patterns. Which method of data
collection will the nurse use that will best obtain this information?

While interviewing an older female patient of Asian descent, the nurse notices that the patient looks
at the ground when answering questions. What should the nurse do?

The nurse begins a shift assessment by examining a surgical dressing that is saturated with
serosanguineous drainage on a patient who had open abdominal surgery yesterday (or 1 day ago).
Which type of assessment approach is the nurse using?

Which statement by a nurse indicates a good understanding about the differences between data
validation and data interpretation?

While completing an admission database, the nurse is interviewing a patient who states "I am allergic
to latex." Which action will the nurse take first?

A charge nurse is evaluating a new nurse's plan of care. Which finding will cause the charge nurse
to follow up?

A new nurse is completing an assessment on an 80-year-old patient who is alert and oriented. The
patient's daughter is present in the room. Which action by the nurse will require follow-up by the
charge nurse?
