Preliminary: The lengths of the 3 sides uniquely define a triangle (by the side-side-side postulate).

So we just need to find any triangle with the three sides blue, yellow, and purple, and then solve for its angles

Creative solution: rotate the triangle 60 degrees from a vertex!

The two blue lines form a 60 degree angle.

The blue lines define an equilateral triangle.

solve for the angles in the triangle with blue, yellow, and purple sides!
