Money and Banking: Lecture 6 - Interest Rates and Present Value 1 - Money and Banking: Lecture 6 - Interest Rates and Present Value 1 by Missouri State University 29,354 views 11 years ago 49 minutes - This course covers the nature and functions of **money**,. Topics include a survey of the

operation and development of the **banking**, ...

The interest rate is the price of credit (not money).

Prices are determined by supply & demand. That includes the price of credit ... i.e., the interest rate.

Interest is an incentive for people to postpone spending.

Compound interest is interest on (past) interest.

How long to double the size of my investment?

If the economy grows by 3% annually, then it will double in size in: $72 \div 3 = 24$ years.

This process is known as 'discounting' future dollars to their present value.

The interest rate used in computing present value is the 'discount rate.'

First Forms of Money

Requirement for Barter

Okay and So I Started You off Let's Go Over Here and Just Do a Few Simple Calculations I Started You Off at the Simplest Possible Calculation I Say if There Are Three Different Goods Then G Times G minus 1 3 Times 2 over 2 Is Equal to 1 3 so We Did that Simple Situation When There Were 4 Different Goods 4 Times 3 over 2 Equals 12 over 2 Equals 6 What Are There 10 Different Goods 10 Times 9 over 2 Is Equal to 45 Yes 90 over 2 What if There Are a Thousand Different Goods 1000 Times 999 over 2 Equals this Won't Work on the Test but I'll Tell You Pretty Close How To Get an Answer It's Not Exactly Right though that's Almost a Thousand Times a Thousand and What's a Thousand Times of Thousands

This Won't Work on the Test but I'll Tell You Pretty Close How To Get an Answer It's Not Exactly Right

though that's Almost a Thousand Times a Thousand and What's a Thousand Times of Thousands a Million so this Is Approximate but Not Exactly but Approximately a Million Divided by Two $1/2$ a Little Dot Therefore Approximately $1/2$ Million Different Prices Now the Thing Is if We Just Had 3 4 5 6 12 15 18 20 Two Things To Remember We Can Do Pretty Well at that over Time You Get some Experience and You Can Kind Of Process That in Your Head but if Somebody Asks You To Remember a Half-Million Things or To Kind Of Just Juggle

What I Mean To Say Is You Could Pay Ten Times Too Much for Something if You're Just Hit with More Information than Your Brain Can Process and So What Happens Is We Had Already a Transaction Cost the Cost of Finding a Trading Partner but in a Barter Economy We Had the Cost of Managing the Information That Is Required To Transact in the Market Economy It's a Second Kind of Transaction Cost and that Makes Barter a Very Costly a Very Efficient Efficient Way of Doing Business and So People Said What Can We Do about this
