Transformational Leadership in Nursing

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Leadership in Healthcare opens up the world of leadership studies to all healthcare professionals. Physicians, nurses, and other healthcare professionals spend thousands of hours studying the science

and technology of healthcare, and years or even decades putting into practice recent findings in molecular biology, clinical diagnostics, and therapeutics. By contrast, the topic of leadership and the traits of effective leaders tend to receive remarkably little attention. Yet no less vital than an understanding of how to interpret diagnostic tests and design care plans is a grasp of healthcare's organizational side, including the operation of multidisciplinary care teams, academic departments, and hospitals. If patient care, education, research, and professional service are to thrive in years to come, we must do a better job of preparing healthcare professionals to lead effectively. Composed of insightful and thought-provoking essays on the key facets of leadership, this book is designed to meet the needs of several important constituencies, including educators of health professionals who wish to incorporate leadership into their educational programs; health professional organizations seeking to enhance their members' leadership effectiveness, and individual health professionals who wish to embrace leadership in their personal and professional lives. This book represents a vital resource for health professionals who wish to enhance the quality of leadership in health professions education, practice, and professional development. In addition to regularly caring for patients, Richard Gunderman, MD PhD MPH brings to this discussion a wealth of personal experience in professional and organizational leadership.
