Intro

Design Tip: finding the center of a circle

Tip: tape the T-nut in place on the front side, it won't fall out when you turn the table over to screw from the back!

The tiles used in this project are high fire ceramic, they can withstand freeze/thaw cycle.

Always follow the manufacturers' directions when mixing grout.

Spray bottle of water is handy, helps you not accidentally "over-water".

Slaking is an important chemical process, allow grout to "slake" for a few minutes, re-stir and then use.

Thoroughly wring out the tile sponge, it should be DAMP. We want to avoid adding more water to the process.

BE PATIENT. How long before you can buff off the grout depends on the size of your groutlines, kind of grout you are using, humidity.

Poke a groutline with your fingertip - if there is not a "dent" you are ready to buff off the grout.

The grout used for this project: polymer fortified sanded grout, readily available from tile and home repair stores.
