Object Oriented Software Engineering

Simple request to get balance • Object: Bank Account • Mechanism: 'get balance' • Procedure: calculate balance and return value

Complications: • Several operations on object - Deposit or withdraw money • Objects use other objects

System level - Number of objects involved - Additional types of object

Dynamic aspects - messages being sent and operations carried out • Static aspects - definitions of types, operations, classes • System behaviour - Static and dynamic behaviour - Internal and external - Subject and system domains

Object oriented systems • Produce a natural model • More realistic models of the real world • Seem complicated, but so are the systems they represent

Builds on 'Fundamentals of Objects to Users' module • Prelude to 'Object Oriented Analysis' and 'Object Oriented Design • Analysis - Did we build the right system? Design - Did we build the system right?
