The actual NCLEX **exam**, ... The most appropriate nursing order for a patient who develops dyspnea and shortness of breath would be...

The nurse observes that Mr. Adams begins to have increased difficulty breathing. She elevates the head of the bed to the high Fowler position, which decreases his respiratory distress. The nurse documents this breathing as

The physician orders a platelet count to be performed on Mrs. Smith after breakfast. The nurse is responsible for

Answer: C. A platelet count evaluates the number of platelets in the circulating blood volume.

The nurse is responsible for giving the patient breakfast at the scheduled time. The physician is responsible for instructing the patient about the test and for writing the order for the test.

Mrs. Mitchell has been given a copy of her diet. The nurse discusses the foods allowed on a 500-mg low sodium diet. These include

Answer: B. Mashed potatoes and broiled chicken are low in natural sodium chloride. Ham, olives, and chicken bouillon contain large amounts of sodium and are contraindicated on a low sodium diet.

The physician orders a maintenance dose of 5,000 units of subcutaneous heparin (an anticoagulant) daily. Nursing responsibilities for Mrs. Mitchell now include

The four main concepts common to nursing that appear in each of the current conceptual models are

Answer: D. The focus concepts that have been accepted by all theorists as the focus of nursing practice from the time of Florence Nightingale include the person receiving nursing care, his environment, his health on the health illness continuum, and the nursing actions necessary to meet his needs.

In Maslow's hierarchy of physiologic needs, the human need of greatest priority is

Answer: D. Maslow, who defined a need as a satisfaction whose absence causes illness, considered oxygen to be the most important physiologic need; without it, human life could not exist. According to this theory, other physiologic needs (including food, water, elimination, shelter, rest and sleep, activity and temperature regulation) must be met before proceeding to the next hierarchical levels on psychosocial needs.

The family of an accident victim who has been declared brain-dead seems amenable to organ donation. What should the nurse do?

Answer: B. The brain-dead patient's family needs support and reassurance in making a decision about organ donation. Because transplants are done within hours of death, decisions about organ donation must be made as soon as possible. However, the family's concerns must be addressed before members are asked to sign a consent form. The body of an organ donor is available for burial. A new head nurse on a unit is distressed about the poor staffing on the 11 p.m. to 7 a.m. shift. What should she do?

Answer: C. Although a new head nurse should initially spend time observing the unit for its strengths and weakness, she should take action if a problem threatens patient safety. In this case, the supervisor is the resource person to approach.

Which of the following principles of primary nursing has proven the most satisfying to the patient and nurse?

Answer: D. Studies have shown that patients and nurses both respond well to primary nursing care units. Patients feel less anxious and isolated and more secure because they are allowed to participate in planning their own care. Nurses feel personal satisfaction, much of it related to positive feedback from the patients. They also seem to gain a greater sense of achievement and esprit de corps

If nurse administers an injection to a patient who refuses that injection, she has committed

Answer: A. Assault is the unjustifiable attempt or threat to touch or injure another person. Battery is the unlawful touching of another person or the carrying out of threatened physical harm. Thus, any act that a nurse performs on the patient against his will is considered assault and battery

If patient asks the nurse her opinion about a particular physicians and the nurse replies that the physician is incompetent, the nurse could be held liable for

Answer: A. Oral communication that injures an individual's reputation is considered slander. Written communication that does the same is considered libel.

A registered nurse reaches to answer the telephone on a busy pediatric unit, momentarily turning away from a 3 month-old infant she has been weighing. The infant falls off the scale, suffering a skull fracture. The nurse could be charged with

Answer: D. Malpractice is defined as injurious or unprofessional actions that harm another. It involves professional misconduct, such as omission or commission of an act that a reasonable and prudent nurse would or would not do. In this example, the standard of care

Which of the following is an example of nursing malpractice?

Which of the following signs and symptoms would the nurse expect to find when assessing an Asian patient for postoperative pain following abdominal surgery?

A patient is admitted to the hospital with complaints of nausea, vomiting, diarrhea, and severe abdominal pain. Which of the following would immediately alert the nurse that the patient has bleeding from the GI tract?

The correct sequence for assessing the abdomen is

High-pitched gurgles head over the right lower quadrant are

A patient about to undergo abdominal inspection is best placed in which of the following positions?

For a rectal examination, the patient can be directed to assume which of the following positions?

During a Romberg test, the nurse asks the patient to assume which position?

If a patient's blood pressure is 150/96, his pulse pressure is

A patient is kept off food and fluids for 10 hours before surgery. His oral temperature at 8 a.m. is 99.8 F (37.7 C) This temperature reading probably indicates

Which of the following parameters should be checked when assessing respirations?

A 38-year old patient's vital signs at 8 a.m. are axillary temperature 99.6 F (37.6 C); pulse rate, 88; respiratory rate, 30. Which findings should be reported?

Palpating the midclavicular line is the correct technique for assessing

Answer: D. The apical pulse (the pulse at the apex of the heart) is located on the midclavicular line at the fourth, fifth, or sixth intercostal space. Baseline vital signs include pulse rate, temperature, respiratory rate, and blood pressure. Blood pressure is typically assessed at the antecubital fossa, and respiratory rate is assessed best by observing chest movement with each inspiration and expiration

The absence of which pulse may not be a significant finding when a patient is admitted to the hospital?

Which of the following patients is at greatest risk for developing pressure ulcers?

Answer: B. Pressure ulcers are most likely to develop in patients with impaired mental status, mobility, activity level, nutrition, circulation and bladder or bowel control. Age is also a factor. Thus, the 88-year old incontinent patient who has impaired nutrition (from gastric cancer) and is confined to bed is at greater risk.

The physician orders the administration of high- humidity oxygen by face mask and placement of the patient in a high Fowler's position. After assessing Mrs. Paul, the nurse writes the following nursing diagnosis: Impaired gas exchange related to increased secretions. Which of the following nursing interventions has the greatest potential for improving this situation?

Answer: A. Adequate hydration thins and loosens pulmonary secretions and also helps to replace fluids lost from elevated temperature, diaphoresis, dehydration and dyspnea. High- humidity air and chest physiotherapy help liquefy and mobilize secretions.

Which of the following statement is incorrect about a patient with dysphagia?

To assess the kidney function of a patient with an indwelling urinary (Foley) catheter, the nurse measures his hourly urine output. She should notify the physician if the urine output is

Certain substances increase the amount of urine produced. These include

Answer: A. Fluids containing caffeine have a diuretic effect. Beets and urinary analgesics, such as pyridium, can color urine red. Kaopectate is an anti diarrheal medication.

A male patient who had surgery 2 days ago for head and neck cancer is about to make his first attempt to ambulate outside his room. The nurse notes that he is steady on his feet and that his vision was unaffected by the surgery. Which of the following nursing interventions would be appropriate?

A patient has exacerbation of chronic obstructive pulmonary disease (COPD) manifested by shortness of breath; orthopnea: thick, tenacious secretions; and a dry hacking cough. An appropriate nursing diagnosis would be

Mrs. Lim begins to cry as the nurse discusses hair loss. The best response would be

An additional Vitamin C is required during all of the following periods except

Answer: B. Additional Vitamin C is needed in growth periods, such as infancy and childhood, and during pregnancy to supply demands for fetal growth and maternal tissues. Other conditions requiring extra vitamin C include wound healing, fever, infection and stress.

A prescribed amount of oxygen is needed for a patient with COPD to prevent

A. Cardiac arrest related to increased partial pressure of carbon dioxide in arterial blood (PaCO_2)

B. Circulatory overload due to hypervolemia

C. Respiratory excitement

D. Inhibition of the respiratory hypoxic stimulus

Answer: D. Delivery of more than 2 liters of oxygen per minute to a patient with chronic obstructive pulmonary disease (COPD), who is usually in a state of compensated respiratory acidosis (retaining carbon dioxide (CO_2)), can inhibit the hypoxic stimulus for respiration. An increased partial pressure of carbon dioxide in arterial blood (PaCO_2) would not initially result in cardiac arrest. Circulatory overload and respiratory excitement have no relevance to the question

After 1 week of hospitalization, Mr. Gray develops hypokalemia. Which of the following is the most significant symptom of his disorder?

Which of the following nursing interventions promotes patient safety?

A. Assess the patient's ability to ambulate and transfer from a bed to a chair

B. Demonstrate the signal system to the patient

C. Check to see that the patient is wearing his identification band

D. All of the above

Studies have shown that about 40% of patients fall out of bed despite the use of side rails; this has led to which of the following conclusions?

Examples of patients suffering from impaired awareness include all of the following except

Answer: C. A patient who cannot care for himself at home does not necessarily have impaired awareness; he may simply have some degree of immobility.

The most common injury among elderly persons is:

A. Atherosclerotic changes in the blood vessels

B. Increased incidence of gallbladder disease

C. Urinary Tract Infection

D. Hip fracture

Answer: D. Hip fracture, the most common injury among elderly persons, usually results from osteoporosis. The other answers are diseases that can occur in the elderly from physiologic changes.

The most common psychogenic disorder among elderly person is

Answer: A. Sleep disturbances, inability to concentrate and decreased appetite are symptoms of depression, the most common psychogenic disorder among elderly persons. Other symptoms include diminished memory, apathy, disinterest in appearance, withdrawal, and irritability. Depression typically begins before the onset of old age and usually is caused by psychosocial, genetic, or biochemical factors

Which of the following vascular system changes results from aging?

Which of the following is the most common cause of dementia among elderly persons?

The nurse's most important legal responsibility after a patient's death in a hospital is

Answer: C. The nurse is legally responsible for labeling the corpse when death occurs in the hospital. She may be involved in obtaining consent for an autopsy or notifying the coroner or medical examiner of a patient's death; however, she is not legally responsible for performing these functions. The attending physician may need information from the nurse to complete the death certificate, but he is responsible for issuing it.

Before rigor mortis occurs, the nurse is responsible for:

A. Providing a complete bath and dressing change

B. Placing one pillow under the body's head and shoulders

C. Removing the body's clothing and wrapping the body in a shroud

D. Allowing the body to relax normally

Answer: B. The nurse must place a pillow under the deceased person's head and shoulders to prevent blood from settling in the face and discoloring it. She is required to bathe only soiled areas of the body since the mortician will wash the entire body. Before wrapping the body in a shroud, the nurse places a clean gown on the body and closes the eyes and mouth.

When a patient in the terminal stages of lung cancer begins to exhibit loss of consciousness, a major nursing priority is to

Answer: A. Ensuring the patient's safety is the most essential action at this time. The other nursing

actions may be necessary but are not a major priority.
