Australian Fish and Seafood Cookbook

Written by the most respected authorities on seafood in the country, this landmark publication contains all you need to know about selecting and preparing over 60 types of fish and seafood, including catching methods, notes on sustainability, flavour profiles and cooking guidelines. More than 130 recipes showcase the delicious potential of the vast array of seafood available, and clear step-by-step photography illustrating the key techniques takes all the guesswork out of cooking seafood at home. Accompanied throughout by striking imagery, this important book is as beautiful as it is informative, and will become the benchmark reference for anyone interested in cooking and eating fish and seafood. 'The bible for seafood. The only book you'll ever need on the topic.' Neil Perry 'A book Australia not only wants, but needs, written by the only people in the country truly equipped to tackle the task. Essential.' John Lethlean

Like the Down of a Thistle

What would you risk for love? Having recently lost her husband, and intent on proving to the township that she can manage on her own, young widow Anna Cumnock has no time and no intention of finding love again. Indebted to the clan tacksman, she's going to have to fight for her croft, her home, and her young daughter. With all the men away to battle, Katherine Scarth needs urgent help to run her croft, or she'll risk the wrath of her husband when he returns. He's a hard man, and it's a hard life in the 18th century Scottish highlands. When Katherine notices her beautiful neighbour, Anna, toiling on her own land, she's captivated. Can she win over the reclusive Anna and convince her that the two of them should work together to save their harvests? Against all the odds, love blossoms amongst the dirt and graft of a crofter's life. But when Katherine's husband returns unexpectedly, the women have to make a choice. One that will change their lives forever... Excitement and HEA guaranteed :)

The Seeker

A bloody murder. An open and shut case? In Oliver Cromwell's London, nothing is as it seems - Captain Damian Seeker must battle to find justice, when an innocent man's life hangs in the balance. 'Challenges CJ Sansom for dominion of historical crime' Sunday Times 'The best historical crime

novel of the year' Sunday Express London, 1654. Oliver Cromwell is at the height of his power and has declared himself Lord Protector. Yet he has many enemies, at home and abroad. London is a complex web of spies and merchants, priests and soldiers, exiles and assassins. One of the web's most fearsome spiders is Damian Seeker, agent of the Lord Protector. No one knows where Seeker comes from, who his family is, or even his real name. All that is known of him for certain is that he is utterly loyal to Cromwell, and that nothing can be long hidden from him. In the city, coffee houses are springing up, fashionable places where men may meet to plot and gossip. Suddenly they are ringing with news of a murder. John Winter, hero of Cromwell's all-powerful army, is dead, and the lawyer, Elias Ellingworth, found standing over the bleeding body, clutching a knife. Yet despite the damning evidence, Seeker is not convinced of Ellingworth's guilt. He will stop at nothing to bring the killer to justice: and Seeker knows better than any man where to search.

Trainspotting

Irvine Welsh's controversial first novel, set on the heroin-addicted fringe of working-class youth in Edinburgh, is yet another exploration of the dark side of Scottishness. The main character, Mark Renton, is at the center of a clique of nihilistic slacker junkies with no hopes and no possibilities, and only "mind-numbing and spirit-crushing" alternatives in the straight world they despise. This particular slice of humanity has nothing left but the blackest of humor and a sharpness of wit. American readers can use the glossary in the back to translate the slang and dialect--essential, since the dialogue makes the book. This is a bleak vision sung as musical comedy. Amazon.

Lord of Fortune

Dashing adventurer Penn Bowen is dedicated to preserving Britain's history and his carefree, bachelor lifestyle. He's happiest when he's in pursuit of knowledge and the occasional liaison with the right woman. So he's more than a little perturbed when the wrong woman inserts herself into his latest quest—proving that a valuable artifact in Oxford's museum is a fake. Amelia Gardiner is smart and capable...and determined to prove that Penn is wrong about the treasure her grandfather found. Amelia won't allow Penn to denigrate her family's legacy, and she certainly won't join the ranks of women who throw themselves at his feet. As secretive and dangerous factions infiltrate their hunt, Amelia and Penn must work together to stay one step ahead. But passion ignites between them and suddenly their alliance is more than a simple convenience. When peril strikes too close, they'll risk everything they hold dear: family, honor, and a chance for the greatest treasure of all—love.

The Treachery of Beautiful Things

Seven years after the forest seemingly swallowed her brother whole, seventeen-year-old Jenny, whose story about Tom's disappearance has never been believed, sets out to finally say goodbye, but instead she is pulled into a mysterious world of faeries and other creatures where nothing is what it seems.

April's Fool

What's the best way to get even with a cheating ex? Find out who her new girlfriend is and play her at her own game. What could possibly go wrong? Rachel Ashford thinks it's a joke when her partner of eight years dumps her on April Fools day, but what makes it worse is finding out Leese has been cheating for months with a gorgeous, young university student and now suddenly she wants all the things Rachel gave up for the sake of the relationship; kids, travel, spontaneity. Rachel is all set to wallow in a pool of self-pity, but when she inadvertently discovers the identity of Leese's new girlfriend, she has a change of plan. New plan: Secretly destroy Leese's relationship so she knows how it feels. (Or at least give it a good try.) What Rachel doesn't plan on, however, is falling in love again in the process. But can a relationship which starts with a lie, end in a happy ever after? This second book from Sarah Swan is a light hearted romantic comedy, sure to deliver some laughs and smiles.

The Last Field Party

Five years after the Lawton High football team last took the field, everyone gathers for a special event back home in Alabama, where each couple must come face-to-face with their past in order to move forward to a future worth celebrating.

The Football Girl

For every athlete or sports fanatic who knows she's just as good as the guys. This is for fans of *The Running Dream* by Wendelin Van Draanen, *Grace, Gold, and Glory* by Gabrielle Douglass and *Breakaway: Beyond the Goal* by Alex Morgan. The summer before Caleb and Tessa enter high school, friendship has blossomed into a relationship . . . and their playful sports days are coming to an end. Caleb is getting ready to try out for the football team, and Tessa is training for cross-country. But all their structured plans derail in the final flag game when they lose. Tessa doesn't want to end her career as a loser. She really enjoys playing, and if she's being honest, she likes it even more than running cross-country. So what if she decided to play football instead? What would happen between her and Caleb? Or between her two best friends, who are counting on her to try out for cross-country with them? And will her parents be upset that she's decided to take her hobby to the next level? This summer Caleb and Tessa figure out just what it means to be a boyfriend, girlfriend, teammate, best friend, and someone worth cheering for. "A great next choice for readers who have enjoyed Catherine Gilbert Murdock's *Dairy Queen* and Miranda Kenneally's *Catching Jordan*."—SLJ "Fast-paced football action, realistic family drama, and sweet romance...[will have] readers looking for girl-powered sports stories...find[ing] plenty to like."—Booklist "Tessa's ferocious competitiveness is appealing."—Kirkus Reviews "[The Football Girl] serve[s] to illuminate the appropriately complicated emotions both of a young romance and of pursuing a dream. Heldring writes with insight and restraint."—The Horn Book

Good Strategy/Bad Strategy

When Richard Rumelt's *Good Strategy/Bad Strategy* was published in 2011, it immediately struck a chord, calling out as bad strategy the mish-mash of pop culture, motivational slogans and business buzz speak so often and misleadingly masquerading as the real thing. Since then, his original and pragmatic ideas have won fans around the world and continue to help readers to recognise and avoid the elements of bad strategy and adopt good, action-oriented strategies that honestly acknowledge the challenges being faced and offer straightforward approaches to overcoming them. Strategy should not be equated with ambition, leadership, vision or planning; rather, it is coherent action backed by an argument. For Rumelt, the heart of good strategy is insight into the hidden power in any situation, and into an appropriate response - whether launching a new product, fighting a war or putting a man on the moon. Drawing on examples of the good and the bad from across all sectors and all ages, he shows how this insight can be cultivated with a wide variety of tools that lead to better thinking and better strategy, strategy that cuts through the hype and gets results.

Ice Trilogy

A New York Review Books Original In 1908, deep in Siberia, it fell to earth. THEIR ICE. A young man on a scientific expedition found it. It spoke to his heart, and his heart named him Bro. Bro felt the Ice. Bro knew its purpose. To bring together the 23,000 blond, blue-eyed Brothers and Sisters of the Light who were scattered on earth. To wake their sleeping hearts. To return to the Light. To destroy this world. And secretly, throughout the twentieth century and up to our own day, the Children of the Light have pursued their beloved goal. Pulp fiction, science fiction, New Ageism, pornography, video-game mayhem, old-time Communist propaganda, and rampant commercial hype all collide, splinter, and splatter in Vladimir Sorokin's virtuosic Ice Trilogy, a crazed joyride through modern times with the promise of a truly spectacular crash at the end. And the reader, as eager for the redemptive fix of a good story as the Children are for the Primordial Light, has no choice except to go along, caught up in a brilliant illusion from which only illusion escapes intact.

The Host

Melanie Stryder refuses to fade away. The earth has been invaded by a species that takes over the minds of their human hosts while leaving their bodies intact, and most of humanity has succumbed. Wanderer, the invading 'soul' who has been given Melanie's body, knew about the challenges of living inside a human: the overwhelming emotions, the too-vivid memories. But there was one difficulty Wanderer didn't expect: the former tenant of her body refusing to relinquish possession of her mind. Melanie fills Wanderer's thoughts with visions of the man Melanie loves - Jared, a human who still lives in hiding. Unable to separate herself from her body's desires, Wanderer yearns for a man she's never met. As outside forces make Wanderer and Melanie unwilling allies, they set off to search for the man they both love.

Love, Lucas

A 2015 Whitney Award Nominee! A powerful story of loss, second chances, and first love, reminiscent of Sarah Dessen and John Green. When Oakley Nelson loses her older brother, Lucas, to cancer, she thinks she'll never recover. Between her parents' arguing and the battle she's fighting with depression, she feels nothing inside but a hollow emptiness. When Mom suggests they spend a few months in California with Aunt Jo, Oakley isn't sure a change of scenery will alter anything, but she's willing to give it a try. In California, Oakley discovers a sort of safety and freedom in Aunt Jo's beach house. Once they're settled, Mom hands her a notebook full of letters addressed to her—from Lucas. As Oakley reads one each day, she realizes how much he loved her, and each letter challenges her to be better and to continue to enjoy her life. He wants her to move on. If only it were that easy. But then a surfer named Carson comes into her life, and Oakley is blindsided. He makes her feel again. As she lets him in, she is surprised by how much she cares for him, and that's when things get complicated. How can she fall in love and be happy when Lucas never got the chance to do those very same things? With her brother's dying words as guidance, Oakley knows she must learn to listen and trust again. But will she have to leave the past behind to find happiness in the future? Sky Pony Press, with our Good Books, Racehorse and Arcade imprints, is proud to publish a broad range of books for young readers—picture books for small children, chapter books, books for middle grade readers, and novels for young adults. Our list includes bestsellers for children who love to play Minecraft; stories told with LEGO bricks; books that teach lessons about tolerance, patience, and the environment, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

A Taxonomy of Love

A YA romance—with a sparkling commercial voice and a dash of science—that explores a relationship over six years. The moment Spencer meets Hope the summer before seventh grade, it's something at first sight. The pair become fast friends, climbing trees and planning world travels. After years of being outshone by his older brother and teased because of his Tourette syndrome, Spencer finally feels like he belongs. But as Hope and Spencer get older and life gets messier, the clear label of "friend" gets messier, too. Through sibling feuds and family tragedies, new relationships and broken hearts, the two grow together and apart, and Spencer, an aspiring scientist, tries to map it all out using his trusty system of taxonomy. He wants to identify and classify their relationship, but in the end, he finds that life doesn't always fit into easy-to-manage boxes, and it's this messy complexity that makes life so rich and beautiful.

Grim Lovelies

When their mistress is murdered, Anouk and her fellow beasties have only three days until their enchantment ends and they are transformed back into animals, but in seeking to remain human, they threaten the hierarchy imposed by the society of magic handlers in Paris called the Haute.

Hopscotch

An "ingenious" science-fiction fantasy about a man who body swaps, and the lengths he must go to get his life back, from a New York Times–bestselling author (Kirkus Reviews). For a fee, Eduard Swan will swap bodies with people in distress—those facing surgeries, emotional crises, moments of unpleasantness, or discomfort they can't or would rather not deal with. Eduard will experience the suffering for them. It's a lucrative business, and in a society in which you can hopscotch from body to body, there is no end of clients seeking to avoid pain. But someone doesn't want to play by the rules. Someone doesn't want to return Eduard's body. And, unfortunately for Eduard, that someone is one of the world's most powerful men. Now Eduard has no choice but to steal back his life. He has the perfect alibi, or so he thinks. On the run with the only friends he can trust—Eduard struggles to find the meaning of identity in a culture in which appearances mean everything—and nothing. Where everything is relative . . . even murder. "Hopscotch is cracking good—swift, sure storytelling, with more plot twists than a snake and twice the bite." —Gregory Benford, author of *Eater* "Kevin J. Anderson is in top form in Hopscotch, a rousing tale that charges hard into territory where nobody has gone before. This one may be the most original book of the year." —Jack McDevitt, author of *Infinity Beach*

Stop Asking Jesus Into Your Heart

Noted pastor J. D. Greear addresses the important but rarely explored topic of Christians who doubt their salvation or have an unclear notion of what “asking Jesus into your heart” really means.

The Never Hero

What if when you died, no one would ever know you were all that stood between man and the enemy? When Jonathan Tibbs awakes in a puddle of his own blood, there isn't a scratch on him to explain it. In the weeks to follow, he comes to find he's been drafted for a war with a violent otherworldly species. A war that only he can remember. Now, the man Jonathan imagined himself becoming is no longer the man who can endure his future. The first installment in this science fiction action adventure series, *The Never Hero* is a gritty and honest look at the psychological journey of a man forced to forge himself into a weapon. Abandoned with little guidance, and at the mercy of a bargain struck far outside his reach, Jonathan races to unlock the means to surmount the odds, and understand the mystery behind a conflict raging outside of time and memory. In the end, the real question is what Jonathan is willing to become to save a planet that will never see his sacrifice.

Everblaze

Sophie uncovers shocking secrets—and faces treacherous new enemies—in this electrifying third book in the *Keeper of the Lost Cities* series. Sophie Foster is ready to fight back. Her talents are getting stronger, and with the elusive Black Swan group ignoring her calls for help, she's determined to find her kidnappers – before they come after her again. But a daring mistake leaves her world teetering on the edge of war, and causes many to fear that she has finally gone too far. And the deeper Sophie searches, the farther the conspiracy stretches, proving that her most dangerous enemy might be closer than she realizes. In this nail-biting third book in the *Keeper of the Lost Cities* series, Sophie must fight the flames of rebellion, before they destroy everyone and everything she loves.

The Girl Who Wrote in Silk

A USA TODAY BESTSELLER! "A powerful debut that proves the threads that interweave our lives can withstand time and any tide, and bind our hearts forever."—Susanna Kearsley, New York Times bestselling author of *Belleweather* and *The Vanished Days* A historical novel inspired by true events, Kelli Estes's brilliant and atmospheric debut is a poignant tale of two women determined to do the right thing, highlighting the power of our own stories. The smallest items can hold centuries of secrets... While exploring her aunt's island estate, Inara Erickson is captivated by an elaborately stitched piece of fabric hidden in the house. The truth behind the silk sleeve dated back to 1886, when Mei Lien, the lone survivor of a cruel purge of the Chinese in Seattle found refuge on Orcas Island and shared her tragic experience by embroidering it. As Inara peels back layer upon layer of the centuries of secrets the sleeve holds, her life becomes interwoven with that of Mei Lien. Through the stories Mei Lien tells in silk, Inara uncovers a tragic truth that will shake her family to its core—and force her to make an impossible choice. Should she bring shame to her family and risk everything by telling the truth, or tell no one and dishonor Mei Lien's memory? A touching and tender book for fans of Marie Benedict, Susanna Kearsley, and Duncan Jepson, *The Girl Who Wrote in Silk* is a dual-time period novel that explores how a delicate piece of silk interweaves the past and the present, reminding us that today's actions have far reaching implications. Praise for *The Girl Who Wrote in Silk*: "A beautiful, elegiac novel, as finely and delicately woven as the title suggests. Kelli Estes spins a spellbinding tale that illuminates the past in all its brutality and beauty, and the humanity that binds us all together." —Susan Wiggs, New York Times bestselling author of *The Beekeeper's Ball* "A touching and tender story about discovering the past to bring peace to the present." —Duncan Jepson, author of *All the Flowers in Shanghai* "Vibrant and tragic, *The Girl Who Wrote in Silk* explores a horrific, little-known era in our nation's history. Estes sensitively alternates between Mei Lien, a young Chinese-American girl who lived in the late 1800s, and Inara, a modern recent college grad who sets Mei Lien's story free." —Margaret Dilloway, author of *How to Be an American Housewife* and *Sisters of Heart and Snow*

Exile

In the second book in the *Keeper of the Lost Cities* series, Sophie must uncover hidden memories as long-buried secrets rise to the surface . . . Sophie Foster thought she was safe. Settled in to her home at Havenfield, surrounded by friends, and using her unique telepathic abilities to train Silveny – the first female alicorn ever seen in the *Lost Cities* – her life finally seems to be coming together. But Sophie's

kidnappers are still out there, and before long before she's back in incredible danger, risking everything to find the answers to questions that could save not only her life, but the life of someone close to her. . .

The World of the End

An American release of an award-winning debut novel from Israel finds epilogist Ben Mendelssohn committing suicide after the death of his beloved wife and encountering a curious material afterlife where he reconnects with long-departed family members but cannot find his wife.

Keeper of the Lost Cities

At age 12, Sophie learns that the remarkable abilities that have always caused her to stand out identify her as an elf. After being brought to Eternalia to hone her skills, she discovers that she has secrets buried in her memory for which some would kill.

The Cult TV Book

Cult TV is a very exciting area of contemporary television. "The Cult TV Book" is the companion reference to this TV phenomenon, whose shows push the boundaries and offer biting commentaries on society today. Cult TV is also changing. Where being cult used to mean being marginal with a small, loyal fan base, cult TV is now key to the television industry, fandom is global and online, cult status for a show is fostered by the networks, and cult series are noted for their spectacular special effects and sumptuous visual style. So, what is cult TV today? Leading scholars, writers and journalists redefine our understanding of cult TV, with new approaches to and case studies on: Cult TV aesthetics, History of cult TV, Cult TV & new media, The 'sub-cultural celebrity', Jane Espenson on how to write cult TV, Cult TV & the broadcast industry, Music, Innovation, Cult channels, Children's cult TV, Sex, Gender, Race, Cult audiences, Transgressive TV, Cult of cult TV, Nancy Holder on writing tie-ins, TV & Film Guide, Fan fiction, "Battlestar Galactica"

Neverseen

The fourth book in the international bestselling Keeper of the Lost Cities series. Perfect for readers aged 9+ and fans of Harry Potter, Rick Riordan and Amari and the Night Brothers. Sophie Foster is on the run – but at least she's not alone. Her closest friends from the Lost Cities have gone with her to join the Black Swan. They still have doubts about the shadowy organization, but the only way to find answers is to start working with them. And as they settle into their new lives, they uncover secrets bigger than anything they'd imagined. But their enemies are far from done, and unleash a terrifying plague that threatens the safety of an entire species. Sophie and her friends fight with everything they have – with new allies joining them – but every choice has consequences. And trusting the wrong person could prove deadly. In this game-changing fourth book in the Keeper of the Lost Cities series, Sophie must question everything to find a truth that will either save her world – or shatter it. Don't miss the brand-new book in the series, Stellarlune, out now! Books in the Keeper of the Lost Cities series: Keeper of the Lost Cities Exile Everblaze Neverseen Lodestar Nightfall Flashback Legacy Stellarlune Unlocked

Liquid Life

If we lived in a liquid world, the concept of a "machine" would make no sense. Liquid life is metaphor and apparatus that discusses the consequences of thinking, working, and living through liquids. It is an irreducible, paradoxical, parallel, planetary-scale material condition, unevenly distributed spatially, but temporally continuous. It is what remains when logical explanations can no longer account for the experiences that we recognize as part of "being alive." Liquid Life references a third-millennial understanding of matter that seeks to restore the agency of the liquid soul for an ecological era, which has been banished by reductionist, "brute" materialist discourses and mechanical models of life. Offering an alternative worldview of the living realm through a "new materialist" and "liquid" study of matter, Armstrong conjures forth examples of creatures that do not obey mechanistic concepts like predictability, efficiency, and rationality. With the advent of molecular science, an increasingly persuasive ontology of liquid technologies can be identified. Through the lens of lifelike dynamic droplets, the agency for these systems exists at the interfaces between different fields of matter/energy that respond to highly local effects, with no need for a central organizing system. Liquid Life seeks an alternative partnership between humanity and the natural world. It provokes a re-invention of the languages of the living realm to open up alternative spaces for exploration, including contributor Rolf

Hughes' "angelology" of language, which explores the transformative invocations of prose poetry, and Simone Ferracina's graphical notations that help shape our concepts of metabolism, upcycling, and designing with fluids. A conceptual and practical toolset for thinking and designing, liquid life reunites us with the irreducible "soul substance" of living things, which will neither be simply "solved," nor go away.

Pegging the President

In the 1960s Jerry Cornelius was the coolest assassin on the Ladbroke Grove block. By the 1970s *The Condition of Muzak* had won the Guardian Fiction Prize and *The Final Programme* was a feature film starring Jon Finch, Jenny Runacre, Hugh Griffith and Sterling Hayden. In the 1980s the world's first cyberpunk continued to inspire a generation of writers including William Gibson, Alan Moore, Neil Gaiman, and bands like the Human League. By the 1990s he was up and running towards the guns again in stories like *The Spencer Inheritance*, *The Camus Referendum* and *Cheering for the Rockets*, which dealt with the icons and key events of the day. At turn of the millennium, in *Firing the Cathedral*, he responded to the attacks on America of September 2001 and their consequences, to the realities of global warming and global terrorism. Now, in *Pegging the President*, Jerry Cornelius is back; the ambiguous, amoral, androgynous English Assassin, cooler, sharper, his fingers still firmly on the pulse of the twenty-first century, counting names and taking heads, showing once again that colonialism and despotism the roots of empire gone sour do not change. The apocalypse has never seemed more terrifying, never been more fun, and modern life will never feel the same to you again -- Provided by the publisher.

9 Days and 9 Nights

In this sequel to the New York Times bestseller *99 Days*, perfect for fans of Jenny Han and Morgan Matson, Molly Barlow finds herself in Europe on her summer vacation, desperately trying to forget everything that happened a year ago. But over the course of nine days and nine nights, her whole life will be turned upside down once more. . . . Molly Barlow isn't that girl anymore. A business major at her college in Boston, she's reinvented herself after everything that went down a year ago... After all the people she hurt and the family she tore apart. Slowly, life is getting back to normal. Molly has just said I love you to her new boyfriend, Ian, and they are off on a romantic European vacation together, starting with scenic London. But there on a tube platform, the past catches up to her in the form of Gabe, her ex, traveling on his own parallel vacation with new girlfriend Sadie. After comparing itineraries, Ian ends up extending an invite for Gabe and Sadie to join them on the next leg of their trip, to Ireland. And Molly and Gabe can't bring themselves to tell the truth about who they once were to each other to their new significant others. Now Molly has to spend 9 days and 9 nights with the boy she once loved, the boy whose heart she shredded, without Ian knowing. Will she make it through as new and improved Molly, or will everything that happened between her and Gabe come rushing back?

Reading Angel

Chronicles all five seasons of the popular Joss Whedon television program, discussing such topics as cinematic aesthetics, music, portrayals of masculinity, and the concept of the superhero.

Girl Last Seen

An intense psychological thriller for readers of *I Am Watching You*, *The Luckiest Girl Alive*, and *All the Missing Girls*. Two missing girls. Thirteen years apart. Olivia Shaw has been missing since last Tuesday. She was last seen outside the entrance of her elementary school in Hunts Point wearing a white spring jacket, blue jeans, and pink boots. I force myself to look at the face in the photo, into her slightly smudged features, and I can't bring myself to move. Olivia Shaw could be my mirror image, rewound to thirteen years ago. If you have any knowledge of Olivia Shaw's whereabouts or any relevant information, please contact... I've spent a long time peering into the faces of girls on missing posters, wondering which one replaced me in that basement. But they were never quite the right age, the right look, the right circumstances. Until Olivia Shaw, missing for one week tomorrow. Whoever stole me was never found. But since I was taken, there hasn't been another girl. And now there is.

The Barren Grounds

Narnia meets traditional Indigenous stories of the sky and constellations in an epic middle grade fantasy series from award-winning author David Robertson. Morgan and Eli, two Indigenous children forced away from their families and communities, are brought together in a foster home in Winnipeg, Manitoba. They each feel disconnected, from their culture and each other, and struggle to fit in at school and at their new home -- until they find a secret place, walled off in an unfinished attic bedroom. A portal opens to another reality, Askí, bringing them onto frozen, barren grounds, where they meet Ochek (Fisher). The only hunter supporting his starving community, Misewa, Ochek welcomes the human children, teaching them traditional ways to survive. But as the need for food becomes desperate, they embark on a dangerous mission. Accompanied by Arik, a sassy Squirrel they catch stealing from the trapline, they try to save Misewa before the icy grip of winter freezes everything -- including them.

Letters from Christopher

In the early morning hours of August 13, 2018, in the small, quiet Colorado town of Frederick, after murdering his family, Chris Watts calculatingly and coldly put his girls in oil battery tanks and buried his pregnant wife in a shallow grave, then returned to work like nothing happened. Chris ultimately pled guilty to the murders, and he is currently serving multiple life sentences. While in prison, Chris receives tons of mail--from family and friends but also fans. Author Cheryln Cadle decided that, after a calling from God, she would write to Chris and ask him if she could write a book about his story. Surprisingly, he wrote back. After a few back-and-forth letters, Chris sent the paperwork to Cheryln to be put on the visitors' list. She then visited him and they talked about her writing a book. After visiting him, he told Cheryln he wanted to tell her his confessions in writing because he felt their conversations were being recorded. He has revealed things to her that no one else knows, not even the FBI. Some of these details will be completely shocking for you to hear. Letters from Christopher is a true crime story with important information to put the pieces of the puzzle together for inquiring minds. Read herein the completely truthful account of what happened to Shanann, Bella, Celeste, and Nico Watts. About the Author New and upcoming author Cheryln Cadle lives in the Midwest with her husband of 47 years, three children and their spouses, and eleven grandchildren. She loves to write, play golf, camp, and travel. Her most favorite pastime is spending time with her grandchildren. She loves true crime stories.

PERSUASION

Persuasion is a novel written by a famous British writer Jane Austen. It is a story about the life of Anne Elliot, a middle daughter of baronet Sir Walter, a spender and bluffer. Due to these features of his character, he found himself in a difficult financial position. He has to rent a family estate Kellynch Hall in order to pay his debts. Meanwhile, his most smart and considerate daughter Anne goes to Uppercross to look after a sick sister. In the days of her youth she was mutually in love with Frederick Wentworth, but because of a fear of a poor marriage, "reasons of conscience" and on the insistence of a "family friend" Lady Russel Anne stopped her relationship with him. But now after eight years, some incredible coincidence happens. The family that rents Kellynch Hall is related to Frederick Wentworth. Is the old-time love still alive in the hearts of Anne and Frederick?

Twilight

When 17 year old Isabella Swan moves to Forks, Washington to live with her father she expects that her new life will be as dull as the town. But in spite of her awkward manner and low expectations, she finds that her new classmates are drawn to this pale, dark-haired new girl in town. But not, it seems, the Cullen family. These five adopted brothers and sisters obviously prefer their own company and will make no exception for Bella. Bella is convinced that Edward Cullen in particular hates her, but she feels a strange attraction to him, although his hostility makes her feel almost physically ill. He seems determined to push her away - until, that is, he saves her life from an out of control car. Bella will soon discover that there is a very good reason for Edward's coldness. He, and his family, are vampires - and he knows how dangerous it is for others to get too close.

Winnie's Great War

From the creative team behind the bestselling, Caldecott Medal-winning Finding Winnie comes an extraordinary wartime adventure seen through the eyes of the world's most beloved bear. Here is a heartwarming imagining of the real journey undertaken by the extraordinary bear who inspired Winnie-the-Pooh. From her early days with her mama in the Canadian forest, to her remarkable travels with the Veterinary Corps across the country and overseas, and all the way to the London Zoo where

she met Christopher Robin Milne and inspired the creation of the world's most famous bear, Winnie is on a great war adventure. This beautifully told story is a triumphant blending of deep research and magnificent imagination. Infused with Sophie Blackall's irresistible renderings of an endearing bear, the book is also woven through with entries from Captain Harry Colebourn's real wartime diaries and contains a selection of artifacts from the Colebourn Family Archives. The result is a one-of-a-kind exploration into the realities of war, the meaning of courage, and the indelible power of friendship, all told through the historic adventures of one extraordinary bear.

Kingdom of Sleep

The world is made safe by a woman . . . but it is a very big world. It has been generations since the Storyteller Queen saved her country from fire and blood - but now the kingdom of Kharuf is threatened by a demon gathering power. When a princess is born, the demon is ready with her final blow: a curse that will cost that princess her very soul, or force her to destroy her own people to save her life. The threads of magic are tightly spun, binding princess and exiled spinners into a desperate quest to break the curse. But the web of power is dangerously tangled - and they may not see the true pattern until it is unspooled. Kingdom of Sleep, by the critically acclaimed E. K. Johnston, is a spellbinding retelling of an enchanting fairy tale with the power of story at its heart.

The Marvellous Sugee Cake

On Simon's seventh birthday, sugee cake promises to be more than just a birthday treat—it brings together family and friends. Simon's family always makes sugee cake on special occasions. And today is one of those days. It's Simon's seventh birthday! He can't wait to bite into a slice. But when Simon sits down to enjoy his treat, things don't go as planned. Or so it seems, for unbeknown to Simon, his friends and family have been planning a birthday surprise for him—one that involves a marvellous sugee cake! A homage to sugee cake that vows to entertain readers as they follow the adventures of Simon and his friends.

Streets with a Story

Camber was the greatest of the Deryni who wanted to retire. But it was not to be. The kingdom of Gwynedd groaned under the tyranny of Imre and his sister and mistress, Ariella. And when Camber learned that Cinhil Haldane, a descendant of the previous kings, still lived, he was determined to set him on the throne in place of the evil ones....

Camber of Culdi

From the acclaimed Printz Honor winner author Stephanie Hemphill comes this powerful fictionalized account of the Salem witch trials from the point of view of three of the real young women living in Salem in 1692. Ann Putnam Jr. is the queen bee. When her father suggests a spate of illnesses in the village is the result of witchcraft, she puts in motion a chain of events that will change Salem forever. Mercy Lewis is the beautiful servant in Ann's house who inspires adulation in some and envy in others. With her troubled past, she seizes her only chance at safety. Margaret Walcott, Ann's cousin, is desperately in love. She is torn between staying loyal to her friends and pursuing a life with her betrothed. With new accusations mounting against the men and women of the community, the girls will have to decide: Is it too late to tell the truth?

Large scale genome editing for metabolic engineering of E coli - Large scale genome editing for metabolic engineering of E coli by GenScript USA Inc. 1,947 views 8 years ago 33 minutes -

Peptide libraries can vastly decrease screening time and research accuracy by providing hundreds of peptides in parallel.

Webinar outline

What is metabolic engineering?

Metabolic engineering require extensive editing of bacterial genome

1 red recombination system

Commonly used recombineering strategies

Selection/counter-selection strategy for seamless editing

GenScript's A Red-CRISPR system

Metabolic engineering for β - carotene production

Engineering MEP pathway and β - carotene pathway

Integrating crtEBIY genes into the genome using Red-CRISPR

Overexpressing MEP pathway

What if we don't know the best expression level

Using CRISPR to introduce RBS variants into the genome

Red-CRISPR for metabolic engineering

Metabolic Pathway Assembly Service Based on OLMA technology

Genome editing workflow

CRISPR services and resources at GenScript

CRISPR webinars on demand

The Labour Market in Winter

This collection of essays, from leading economic experts on the UK labour market, provides an overview of the key issues concerning the performance of the labour market, and the policy issues surrounding it, with a focus on the recent recession and its aftermath. The book contains assessments of the effects of many policies introduced over the last 10 years in employment, education, and welfare. The result is the first serious comprehensive analysis of the economic downturn and the Labour government's record in the field of employment, spanning its time in office. An indispensable reference source on contemporary labour market developments in the UK, this book will be required reading, and of lasting use, to academics, students, practitioners, and policy makers.

Evolutionary Algorithms and Chaotic Systems

This book discusses the mutual intersection of two fields of research: evolutionary computation, which can handle tasks such as control of various chaotic systems, and deterministic chaos, which is investigated as a behavioral part of evolutionary algorithms.

Simulated Evolution and Learning

This volume constitutes the proceedings of the 9th International Conference on Simulated Evolution and Learning, SEAL 2012, held in Hanoi, Vietnam, in December 2012. The 50 full papers presented were carefully reviewed and selected from 91 submissions. The papers are organized in topical sections on evolutionary algorithms, theoretical developments, swarm intelligence, data mining, learning methodologies, and real-world applications.

Evolution

Evolution: Components and Mechanisms introduces the many recent discoveries and insights that have added to the discipline of organic evolution, and combines them with the key topics needed to gain a fundamental understanding of the mechanisms of evolution. Each chapter covers an important topic or factor pertinent to a modern understanding of evolutionary theory, allowing easy access to particular topics for either study or review. Many chapters are cross-referenced. Modern evolutionary theory has expanded significantly within only the past two to three decades. In recent times the definition of a gene has evolved, the definition of organic evolution itself is in need of some modification, the number of known mechanisms of evolutionary change has increased dramatically, and the emphasis placed on opportunity and contingency has increased. This book synthesizes these changes and presents many of the novel topics in evolutionary theory in an accessible and thorough format. This book is an ideal, up-to-date resource for biologists, geneticists, evolutionary biologists, developmental biologists, and researchers in, as well as students and academics in these areas and professional scientists in many subfields of biology. Discusses many of the mechanisms responsible for evolutionary change. Includes an appendix that provides a brief synopsis of these mechanisms with most discussed in greater detail in respective chapters. Aids readers in their organization and understanding of the material by addressing the basic concepts and topics surrounding organic evolution. Covers some topics not typically addressed, such as opportunity, contingency, symbiosis, and progress.

Theoretical Aspects of Population Genetics. (MPB-4), Volume 4

To show the importance of stochastic processes in the change of gene frequencies, the authors discuss topics ranging from molecular evolution to two-locus problems in terms of diffusion models. Throughout their discussion, they come to grips with one of the most challenging problems in population genetics--the ways in which genetic variability is maintained in Mendelian populations. R.A. Fisher, J.B.S. Haldane, and Sewall Wright, in pioneering works, confirmed the usefulness of mathematical theory in population genetics. The synthesis their work achieved is recognized today as mathematical genetics, that branch of genetics whose aim is to investigate the laws governing the genetic structure of natural populations and, consequently, to clarify the mechanisms of evolution. For the benefit of population geneticists without advanced mathematical training, Professors Kimura and Ohta use verbal description rather than mathematical symbolism wherever practicable. A mathematical appendix is included.

Parallel Problem Solving from Nature, PPSN XI

This book constitutes the refereed proceedings of the 11th International Conference on Parallel Problem Solving from Nature - PPSN XI, held in Kraków, Poland, in September 2010. The 131 revised full papers were carefully reviewed and selected from 232 submissions. The conference covers a wide range of topics, from evolutionary computation to swarm intelligence, from bio-inspired computing to real world applications. Machine learning and mathematical games supported by evolutionary algorithms as well as memetic, agent-oriented systems are also represented.

AP Biology For Dummies

Relax. The fact that you're even considering taking the AP Biology exam means you're smart, hard-working and ambitious. All you need is to get up to speed on the exam's topics and themes and take a couple of practice tests to get comfortable with its question formats and time limits. That's where *AP Biology For Dummies* comes in. This user-friendly and completely reliable guide helps you get the most out of any AP biology class and reviews all of the topics emphasized on the test. It also provides two full-length practice exams, complete with detailed answer explanations and scoring guides. This powerful prep guide helps you practice and perfect all of the skills you need to get your best possible score. And, as a special bonus, you'll also get a handy primer to help you prepare for the test-taking

experience. Discover how to: Figure out what the questions are actually asking Get a firm grip on all exam topics, from molecules and cells to ecology and genetics Boost your knowledge of organisms and populations Become equally comfortable with large concepts and nitty-gritty details Maximize your score on multiple choice questions Craft clever responses to free-essay questions Identify your strengths and weaknesses Use practice tests to adjust your exam-taking strategy Supplemented with handy lists of test-taking tips, must-know terminology, and more, AP Biology For Dummies helps you make exam day a very good day, indeed.

College Biology Learning Exercises & Answers

This textbook is designed as a quick reference for "College Biology" volumes one through three. It contains each "Chapter Summary," "Art Connection," "Review," and "Critical Thinking" Exercises found in each of the three volumes. It also contains the COMPLETE alphabetical listing of the key terms. (black & white version) "College Biology," intended for capable college students, is adapted from OpenStax College's open (CC BY) textbook "Biology." It is Textbook Equity's derivative to ensure continued free and open access, and to provide low cost print formats. For manageability and economy, Textbook Equity created three volumes from the original that closely match typical semester or quarter biology curriculum. No academic content was changed from the original. See textbookequity.org/tbq_biology This supplement covers all 47 chapters.

Evolutionary Computation

Computational intelligence is a general term for a class of algorithms designed by nature's wisdom and human intelligence. Computer scientists have proposed many computational intelligence algorithms with heuristic features. These algorithms either mimic the evolutionary processes of the biological world, mimic the physiological structure and bodily functions of the organism, imitate the behavior of the animal's group, mimic the characteristics of human thought, language, and memory processes, or mimic the physical phenomena of nature, hoping to simulate the wisdom of nature and humanity enables an optimal solution to the problem and solves an acceptable solution in an acceptable time. Computational intelligent algorithms have received extensive attention at home and abroad, and have become an important research direction of artificial intelligence and computer science. This book will introduce the application of intelligent optimization algorithms in detail from the aspects of computational intelligence, job shop scheduling problems, multi-objective optimization problems, and machine learning

Recent Advances in Industrial Production

This book presents the select proceedings of the International Conference on Evolution in Manufacturing (ICEM 2020), and examines a range of areas including evolution in manufacturing, intelligent networks, bio-Inspired models and algorithms, internet-of-things, and cyber manufacturing. This book intends to provide a contribution to the domain of collaborative and intelligent networks and systems to fill the gap in theories and practical applications through suitable methods and solutions applicable to a wide range of instances. Various topics covered include broad range of research challenges in the fields of artificial intelligence and addressing current and future trends in industry 4.0 oriented scenario, data analytics and big data, operation and manufacturing management. The book will be a valuable reference for beginners, researchers and professionals interested in artificial intelligence in engineering and production management and allied fields.

Reinforcement Learning

Reinforcement learning encompasses both a science of adaptive behavior of rational beings in uncertain environments and a computational methodology for finding optimal behaviors for challenging problems in control, optimization and adaptive behavior of intelligent agents. As a field, reinforcement learning has progressed tremendously in the past decade. The main goal of this book is to present an up-to-date series of survey articles on the main contemporary sub-fields of reinforcement learning. This includes surveys on partially observable environments, hierarchical task decompositions, relational knowledge representation and predictive state representations. Furthermore, topics such as transfer, evolutionary methods and continuous spaces in reinforcement learning are surveyed. In addition, several chapters review reinforcement learning methods in robotics, in games, and in computational neuroscience. In total seventeen different subfields are presented by mostly young experts in those areas, and together they truly represent a state-of-the-art of current reinforcement learning research.

Marco Wiering works at the artificial intelligence department of the University of Groningen in the Netherlands. He has published extensively on various reinforcement learning topics. Martijn van Otterlo works in the cognitive artificial intelligence group at the Radboud University Nijmegen in The Netherlands. He has mainly focused on expressive knowledge representation in reinforcement learning settings.

Fundamentals of Mathematical Evolutionary Genetics

One service mathematics has rendered the ~Et moi ..., si j'avait su comment en revenir, human race. It has put common sense back je riy serais point aile.' Jules Verne where it belongs, on the topmost shelf next to the dusty canister labelled 'discarded non The series is divergent; therefore we may be sense'. able to do something with it. Eric T. Bell O. Heavyside Mathematics is a tool for thought. A highly necessary tool in a world where both feedback and non linearities abound. Similarly, all kinds of parts of mathematics serve as tools for other parts and for other sciences. Applying a simple rewriting rule to the quote on the right above one finds such statements as: 'One service topology has rendered mathematical physics .. o'; 'One service logic has rendered computer science .. o'; 'One service category theory has rendered mathematics .. '. All arguably true. And all statements obtainable this way form part of the raison d'etre of this series.

Ecology, Genetics and Evolution of Metapopulations

Spatial dynamics, landscape, population.

On the Law Which Has Regulated the Introduction of New Species

This early work by Alfred Russel Wallace was originally published in 1855 and we are now republishing it with a brand new introductory biography. 'On the Law Which Has Regulated the Introduction of New Species' is an article that details Wallace's ideas on the natural arrangement of species and their successive creation. Alfred Russel Wallace was born on 8th January 1823 in the village of Llanbadoc, in Monmouthshire, Wales. Wallace was inspired by the travelling naturalists of the day and decided to begin his exploration career collecting specimens in the Amazon rainforest. He explored the Rio Negra for four years, making notes on the peoples and languages he encountered as well as the geography, flora, and fauna. While travelling, Wallace refined his thoughts about evolution and in 1858 he outlined his theory of natural selection in an article he sent to Charles Darwin. Wallace made a huge contribution to the natural sciences and he will continue to be remembered as one of the key figures in the development of evolutionary theory.

Genetics and Evolution of Infectious Diseases

Genetics and Evolution of Infectious Diseases is at the crossroads between two major scientific fields of the 21st century: evolutionary biology and infectious diseases. The genomic revolution has upset modern biology and has revolutionized our approach to ancient disciplines such as evolutionary studies. In particular, this revolution is profoundly changing our view on genetically driven human phenotypic diversity, and this is especially true in disease genetic susceptibility. Infectious diseases are indisputably the major challenge of medicine. When looking globally, they are the number one killer of humans and therefore the main selective pressure exerted on our species. Even in industrial countries, infectious diseases are now far less under control than 20 years ago. The first part of this book covers the main features and applications of modern technologies in the study of infectious diseases. The second part provides detailed information on a number of the key infectious diseases such as malaria, SARS, avian flu, HIV, tuberculosis, nosocomial infections and a few other pathogens that will be taken as examples to illustrate the power of modern technologies and the value of evolutionary approaches. Takes an integrated approach to infectious diseases Includes contributions from leading authorities Provides the latest developments in the field

Structured-Population Models in Marine, Terrestrial, and Freshwater Systems

In the summer of 1993, twenty-six graduate and postdoctoral students and fourteen lecturers converged on Cornell University for a summer school devoted to structured-population models. This school was one of a series to address concepts cutting across the traditional boundaries separating terrestrial, marine, and freshwater ecology. Earlier schools resulted in the books Patch Dynamics (S. A. Levin, T. M. Powell & J. H. Steele, eds., Springer-Verlag, Berlin, 1993) and Ecological Time Series (T. M.

Powell & J. H. Steele, eds., Chapman and Hall, New York, 1995); a book on food webs is in preparation. Models of population structure (differences among individuals due to age, size, developmental stage, spatial location, or genotype) have an important place in studies of all three kinds of ecosystem. In choosing the participants and lecturers for the school, we selected for diversity-biologists who knew some mathematics and mathematicians who knew some biology, field biologists sobered by encounters with messy data and theoreticians intoxicated by the elegance of the underlying mathematics, people concerned with long-term evolutionary problems and people concerned with the acute crises of conservation biology. For four weeks, these perspectives swirled in discussions that started in the lecture hall and carried on into the sweltering Ithaca night. Diversity may or may not increase stability, but it surely makes things interesting.

Artificial Evolution

This book constitutes selected best papers from the 10th International Conference on Artificial Evolution, EA 2011, held in Angers, France, in October 2011. Initially, 33 full papers and 10 post papers were carefully reviewed and selected from 64 submissions. This book presents the 19 best papers selected from these contributions. The papers are organized in topical sections on ant colony optimization; multi-objective optimization; analysis; implementation and robotics; combinatorial optimization; learning and parameter tuning; new nature inspired models; probabilistic algorithms; theory and evolutionary search; and applications.

Evolutionary Computation, Machine Learning and Data Mining in Bioinformatics

The field of bioinformatics has two main objectives: the creation and maintenance of biological databases, and the discovery of knowledge from life sciences data in order to unravel the mysteries of biological function, leading to new drugs and therapies for human disease. Life sciences data come in the form of biological sequences, structures, pathways, or literature. One major aspect of discovering biological knowledge is to search, predict, or model specific information in a given dataset in order to generate new interesting knowledge. Computer science methods such as evolutionary computation, machine learning, and data mining all have a great deal to offer the field of bioinformatics. The goal of the 8th European Conference on Evolutionary Computation, Machine Learning, and Data Mining in Bioinformatics (EvoBIO 2010) was to bring together experts in these fields in order to discuss new and novel methods for tackling complex biological problems. The 8th EvoBIO conference was held in Istanbul, Turkey during April 7–9, 2010 at the Istanbul Technical University. EvoBIO 2010 was held jointly with the 13th European Conference on Genetic Programming (EuroGP 2010), the 10th European Conference on Evolutionary Computation in Combinatorial Optimization (EvoCOP 2010), and the conference on the applications of evolutionary computation, EvoApplications. Collectively, the conferences are organized under the name Evo* (www.evostar.org). EvoBIO, held annually as a workshop since 2003, became a conference in 2007 and it is now the premiere European event for those interested in the interface between evolutionary computation, machine learning, data mining, bioinformatics, and computational biology.

The Semantic Web - ISWC 2008

This book constitutes the refereed proceedings of the 7th International Semantic Web Conference, ISWC 2008, held in Karlsruhe, Germany, during October 26–30, 2008. The volume contains 43 revised full research papers selected from a total of 261 submissions, of which an additional 3 papers were referred to the semantic Web in-use track; 11 papers out of 26 submissions to the semantic Web in-use track, and 7 papers and 12 posters accepted out of 39 submissions to the doctoral consortium. The topics covered in the research track are ontology engineering; data management; software and service engineering; non-standard reasoning with ontologies; semantic retrieval; OWL; ontology alignment; description logics; user interfaces; Web data and knowledge; semantic Web services; semantic social networks; and rules and relatedness. The semantic Web in-use track covers knowledge management; business applications; applications from home to space; and services and infrastructure.

Teaching About Evolution and the Nature of Science

Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists

approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume: Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

Student Study Guide

by Richard Liebaert, Linn-Benton Community College. Students can master key concepts and earn a better grade with the thought-provoking exercises found in this study guide. A wide range of questions and activities help students test their understanding of biology. The Student Study Guide also includes references to student media activities on the Campbell Biology CD-ROM and Web Site.

Nature Inspired Cooperative Strategies for Optimization (NICSO 2013)

Biological and other natural processes have always been a source of inspiration for computer science and information technology. Many emerging problem solving techniques integrate advanced evolution and cooperation strategies, encompassing a range of spatio-temporal scales for visionary conceptualization of evolutionary computation. This book is a collection of research works presented in the VI International Workshop on Nature Inspired Cooperative Strategies for Optimization (NICSO) held in Canterbury, UK. Previous editions of NICSO were held in Granada, Spain (2006 & 2010), Acireale, Italy (2007), Tenerife, Spain (2008), and Cluj-Napoca, Romania (2011). NICSO 2013 and this book provides a place where state-of-the-art research, latest ideas and emerging areas of nature inspired cooperative strategies for problem solving are vigorously discussed and exchanged among the scientific community. The breadth and variety of articles in this book report on nature inspired methods and applications such as Swarm Intelligence, Hyper-heuristics, Evolutionary Algorithms, Cellular Automata, Artificial Bee Colony, Dynamic Optimization, Support Vector Machines, Multi-Agent Systems, Ant Clustering, Evolutionary Design Optimisation, Game Theory and other several Cooperation Models.

Evolutionary Multi-Criterion Optimization

This book constitutes the refereed proceedings of the 6th International Conference on Evolutionary Multi-Criterion Optimization, EMO 2011, held in Ouro Preto, Brazil, in April 2011. The 42 revised full papers presented were carefully reviewed and selected from 83 submissions. The papers deal with fundamental questions of EMO theory, such as the development of algorithmically efficient tools for the evaluation of solution-set quality, the theoretical questions related to solution archiving and others. They report on the continuing effort in the development of algorithms, either for dealing with particular classes of problems or for new forms of processing the problem information. Almost one third of the papers is related to EMO applications in a diversity of fields. Eleven papers are devoted to promote the interaction with the related field of Multi-Criterion Decision Making (MCDM).

Evolutionary Data Clustering: Algorithms and Applications

This book provides an in-depth analysis of the current evolutionary clustering techniques. It discusses the most highly regarded methods for data clustering. The book provides literature reviews about single objective and multi-objective evolutionary clustering algorithms. In addition, the book provides a comprehensive review of the fitness functions and evaluation measures that are used in most of evolutionary clustering algorithms. Furthermore, it provides a conceptual analysis including definition, validation and quality measures, applications, and implementations for data clustering using classical and modern nature-inspired techniques. It features a range of proven and recent nature-inspired

algorithms used to data clustering, including particle swarm optimization, ant colony optimization, grey wolf optimizer, salp swarm algorithm, multi-verse optimizer, Harris hawks optimization, beta-hill climbing optimization. The book also covers applications of evolutionary data clustering in diverse fields such as image segmentation, medical applications, and pavement infrastructure asset management.

Study Guide for 31840 - Biology-First Edition

Four modified versions of particle swarm optimizer (PSO) have been applied to the economic power dispatch with valve-point effects. In order to obtain the optimal solution, traditional PSO search a new position around the current position. The proposed strategies which explore the vicinity of particle's best position found so far leads to a better result. In addition, to deal with the equality constraint of the economic dispatch problems, a simple mechanism is also devised that the difference of the demanded load and total generating power is evenly shared among units except the one reaching its generating limit. To show their capability, the proposed algorithms are applied to thirteen. Comparison among particle swarm optimization is given. The results show that the proposed algorithms indeed produce more optimal solutions in both cases. The different PSO techniques are New PSO, Self-Adaptive PSO and Chaotic PSO. Among the different PSO techniques, it is found that Self-Adaptive PSO is better than other PSO techniques in terms of better solutions, speed of convergence, time of execution and robustness but it has more premature convergence.

College Biology II

Modern economies never come to rest. From institutions to activities of production, trade, and consumption, everything is locked in processes of perpetual transformation – and so are our daily lives. Why and how do such transformations occur? What can economic theory tell us about these changes and where they might lead? Ulrich Witt's book discusses why evolutionary concepts are necessary to answer such questions. While economic evolution is in many respects unique, it nonetheless needs to be seen within the broader context of natural evolution. By exploring this complex relationship, *Rethinking Economic Evolution* demonstrates the significance of an evolutionary economic theory.

Particle swarm optimizer: Economic dispatch with valve point effect using various PSO techniques

Computers that 'program themselves' has long been an aim of computer scientists. Recently genetic programming (GP) has started to show its promise by automatically evolving programs. Indeed in a small number of problems GP has evolved programs whose performance is similar to or even slightly better than that of programs written by people. The main thrust of GP has been to automatically create functions. While these can be of great use they contain no memory and relatively little work has addressed automatic creation of program code including stored data. This issue is the main focus of Genetic Programming, and Data Structures: Genetic Programming + Data Structures = Automatic Programming!. This book is motivated by the observation from software engineering that data abstraction (e.g., via abstract data types) is essential in programs created by human programmers. This book shows that abstract data types can be similarly beneficial to the automatic production of programs using GP. Genetic Programming and Data Structures: Genetic Programming + Data Structures = Automatic Programming! shows how abstract data types (stacks, queues and lists) can be evolved using genetic programming, demonstrates how GP can evolve general programs which solve the nested brackets problem, recognises a Dyck context free language, and implements a simple four function calculator. In these cases, an appropriate data structure is beneficial compared to simple indexed memory. This book also includes a survey of GP, with a critical review of experiments with evolving memory, and reports investigations of real world electrical network maintenance scheduling problems that demonstrate that Genetic Algorithms can find low cost viable solutions to such problems. Genetic Programming and Data Structures: Genetic Programming + Data Structures = Automatic Programming! should be of direct interest to computer scientists doing research on genetic programming, genetic algorithms, data structures, and artificial intelligence. In addition, this book will be of interest to practitioners working in all of these areas and to those interested in automatic programming.

Rethinking Economic Evolution

This early work by Alfred Russel Wallace was originally published in 1858 and we are now republishing it with a brand new introductory biography. 'On the Tendency of Varieties to Depart Indefinitely From the Original Type' is a short article on variation and evolutionary theory. Alfred Russel Wallace was born on 8th January 1823 in the village of Llanbadoc, in Monmouthshire, Wales. Wallace was inspired by

the travelling naturalists of the day and decided to begin his exploration career collecting specimens in the Amazon rainforest. He explored the Rio Negra for four years, making notes on the peoples and languages he encountered as well as the geography, flora, and fauna. While travelling, Wallace refined his thoughts about evolution and in 1858 he outlined his theory of natural selection in an article he sent to Charles Darwin. Wallace made a huge contribution to the natural sciences and he will continue to be remembered as one of the key figures in the development of evolutionary theory.

Genetic Programming and Data Structures

Science need not be dull and bogged down by jargon, as Richard Dawkins proves in this entertaining look at evolution. The themes he takes up are the concepts of altruistic and selfish behaviour; the genetical definition of selfish interest; the evolution of aggressive behaviour; kinship theory; sex ratio theory; reciprocal altruism; deceit; and the natural selection of sex differences. 'Should be read, can be read by almost anyone. It describes with great skill a new face of the theory of evolution.' W.D. Hamilton, *Science*

On the Tendency of Varieties to Depart Indefinitely From the Original Type

The two-volume set LNCS 8297 and LNCS 8298 constitutes the proceedings of the 4th International Conference on Swarm, Evolutionary and Memetic Computing, SEMCCO 2013, held in Chennai, India, in December 2013. The total of 123 papers presented in this volume was carefully reviewed and selected for inclusion in the proceedings. They cover cutting-edge research on swarm, evolutionary and memetic computing, neural and fuzzy computing and its application.

The Selfish Gene

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Swarm, Evolutionary, and Memetic Computing

Advances in Genetic Programming reports significant results in improving the power of genetic programming, presenting techniques that can be employed immediately in the solution of complex problems in many areas, including machine learning and the simulation of autonomous behavior. Popular languages such as C and C++ are used in many of the applications and experiments, illustrating how genetic programming is not restricted to symbolic computing languages such as LISP. Researchers interested in getting started in genetic programming will find information on how to begin, on what public-domain code is available, and on how to become part of the active genetic programming community via electronic mail.

Concepts of Biology

One program that ensures success for all students

Economically Active Population, Employment, Unemployment and Hours of Work (household Surveys).

Based on observational and experimental data, in natural populations of plants and animals studied in the field and in the laboratory, this perspective unravels the hidden and often poorly founded assumptions underlying some of the more troublesome controversies in evolutionary biology today

Advances in Genetic Programming

This book constitutes the proceedings of the First International Conference on Innovative Computing Technology, INCT 2011, held in Tehran, Iran, in December 2011. The 40 revised papers included in this book were carefully reviewed and selected from 121 submissions. The contributions are organized in topical sections on software; Web services and service architecture; computational intelligence; data modeling; multimedia and image segmentation; natural language processing; networks; cluster computing; and discrete systems.

Prentice Hall Biology, 2002

Summarizes the latest research findings on the biology of the sauropod dinosaurs, the largest land-living animals, and covers nutrition, physiology, skeletal structure, and growth.

The Adaptive Seascape

This introductory, one quarter/one-semester text takes a multidisciplinary approach to studying the relationship between plants and people. The authors strive to stimulate interest in plant science and encourage students to further their studies in botany. Also, by exposing students to society's historical connection to plants, Levetin and McMahon hope to instill a greater appreciation for the botanical world. Plants and Society covers basic principles of botany with strong emphasis on the economic aspects and social implications of plants and fungi.
