Intro

The use of benzodiazepines in pregnancy is associated with which of the following?

The highest rate of illicit drug use is found among individuals of the ages

A 34-year-old woman presents with complaints of disturbed sleep due to nightmares, intermittent abdominal pain, rectal pain, diarrhea, dyspareunia, myofascial pain, occasional paresthesias in the hands, occasional panic attacks, and an avoidance of driving 3 months after being in a car crash in which her daughter (a passenger) was killed. Given her most likely diagnosis, which of the following

statements is false? A. Mental status exam is likely to reveal alexithymia (inability to verbalize or identify feeling states), as well as withdrawal and social

A true statement concerning competence is: A. Competence is a medical concept.

A 45-year-old typist has had symptoms of carpal tunnel unresponsive to conservative therapy. In follow-up to her carpal tunnel release, she describes diffuse burning pain of her limb, hyperesthesia, hyperhidrosis, weakness, and periodic blanching of her limb. You suggest which of the following? A. That such pain is common following carpal tunnel surgery

True statements concerning the PLISSIT model of sexual counseling includes all of the following except

Risk factors for developing alcohol withdrawal include which of the following?

A 76-year-old is hospitalized for pneumonia. The patient has fluctuating levels of attention, changes in awareness, and marked disturbance of the sleep-wake cycle. You initially recommend which of the following?

You have successfully treated and maintained a 34-year-old male with major depression and no other health problems on 40 mg of fluoxetine qid for 6 months. He now presents complaining of persistent anorgasmia, which has become a significant problem in his new relationship. All of the following would be possible ways of treating this except: A. Decrease the dose of fluoxetine by 10 to 20 mg a day

The drug of choice for panic disorder is

You are treating a 35-year-old white female with major depression. When taking sertraline (Zoloft) in the past she has experienced sexual dysfunction. Which one of the following antidepressants would be the best alternative?

A 27-year-old woman comes to your office with the complaint of a creeping, crawling sensation of the legs interfering with sleep. Your management might include all of the following except

The patient in question 18 has an appropriate evaluation and all testing is normal; you prescribe which of the following?

A 32-year-old married female with a history of Bipolar I disorder, without psychotic features, currently euthymic, presents with her husband to discuss family planning. She does not have a history of dangerous or suicidal behaviors, or drug use while mentally ill. She is currently maintained on 600 mg of lithium bid. Which of the following is true regarding the management of bipolar disorder in pregnancy?

A 45-year-old woman with a history of depression reports having symptoms of the flu and increasing irritability. She even reports having slapped her husband during an argument. She states that this type of action is very uncharacteristic of her. This event took place after she discontinued a medication. Which of the following medications might she have been taking?

A 19-year-old female is brought into your office by her parents. They are concerned because their daughter has been going out 1 to 3 Saturday nights a month for the past 3 months and drinks 8 to 12 beers plus 1 to 3 shots each night. When talking with the family, which is the most appropriate term to use in describing their daughter's drinking behavior?

A 39-year-old female was repeatedly raped by a group of three gang members 2 weeks previous to seeing you. Her symptoms included flashbacks; recurrent distressing dreams; physiologic reactivity to internal or external cues that resemble the rape; feelings of detachment from others; restricted range of affect; efforts to avoid thoughts, feelings, or conversations associated with the rape; sleep disturbance; hypervigilance; and exaggerated startle response. Which of the following is the most appropriate diagnosis?

"Atypical" depression includes all of the following features except

John Smith is in your office to establish care. He is complaining of irritability, difficulty getting to sleep, difficulty concentrating, and excessive worry. These symptoms have been consistent over the past 8 months. The most appropriate diagnosis for Mr. Smith is

The first-line agent for individuals who suffer from panic disorder is

The current treatment of choice for individuals with specific phobias, such as fear of spiders, elevators, airplanes, or blood, is

The most effective approach to the reduction of symptoms in post-traumatic stress disorder is

Which of the following would be the most appropriate short- term adjunctive therapy for an SSRI for panic disorder?

In the previous case, your initial treatment recommendations should include which of the following Characteristics that distinguish seasonal affective disorder (SAD) from major depressive disorder are increased appetite and weight gain, and

In the assessment and management of acute alcohol withdrawal, which of the following is not a red flag suggesting the need for inpatient medical management of the condition? A. A history of severe

withdrawal symptoms such as seizures

Which of the following is required in order to make the diagnosis of Bipolar II disorder?

A woman in an abusive relationship is most at risk of being killed by her abuser when she

A 24-year-old white female has had a depressed mood on most days for several years. She has low self-esteem, low energy, and difficulty making decisions. There is no evidence of psychosis or mania. There is no weight change or sleep disturbance. This presentation is most consistent with a diagnosis of

In the assessment of a depressed patient, which of the following is not considered important in determining lethality of a plan to commit suicide? A. Whether the person has a specific plan and the means to carry it

Appropriate advice regarding sleep hygiene or sleep habits includes which of the following? A. If you cannot get to sleep in 45 minutes, stay quietly in bed until

Which one of the following is required in order to make the diagnosis of Bipolar I disorder?

The most appropriate intervention for this patient's alcohol use would be: A. Confront the patient with the facts about the morbidity and

All of the following are risk factors for developing PTSD following a traumatic event except

Using the stages for readiness for change, helping the patient formulate a plan to stop his or her alcohol use is most appropriate during which stage?

Which of the following is not a short-term effect of marijuana use?

Regarding the use of antidepressants in pregnancy, which of the following is true? A. Tricyclic antidepressants (TCAS) can be used safely throughout

An antidepressant medication that might be activating for a patient whose depression is partially manifested in depressed mood, marked fatigue, and lethargy is which of the following?

The cardiac effects of antipsychotics include

A 74-year-old nursing home patient with Parkinson's disease and dementia is found delirious, febrile, diaphoretic, and unable to respond coherently. The neurologic exam is difficult and reveals lead pipe rigidity but no clear focal change. The only recent medication changes were made by the consulting neurologist, who noted worsening cognitive and behavioral changes over stable Parkinson's. He discontinued amantadine and started olanzapine at a low dose of the following, you would be most likely to find

Which of the following is correct concerning sleep changes with aging?

Which of the following has been found to buffer the stress of children whose parents divorce?

A diagnosis of major depressive disorder is suggested over that of adjustment disorder by which of the following? A. Symptoms of anxiety and depression 4 months after divorce or

Which of the following is not a possible result of valproic acid therapy?

Which of the following statements is true regarding the diagnosis of a major depressive episode? A. There is virtually always a clear precipitating factor. Symptoms must present for 2 weeks, with a clear change in

Which of the following is true of the use of mood stabilizers in pregnancy? A. Lithium is not associated with the development of Ebstein's

A man in his mid-50s is having difficulty with maintaining erections. He has experienced transient difficulties with impotence before. He acknowledges this has been during stressful periods of his life, and that he is currently under stress in his job. The physical exam is unremarkable and the patient is otherwise healthy. The most appropriate step to take is to
