Prehistory and Protohistory of Eastern India

The thesis outlines an account of Eastern India, as revealed by the study of stone tools left behind by ancient man. It is based on published materials as well as personal observations in the field and on study of the objects in various museums. The environmental background is first given in order to understand the natural factors which man had to face. The account properly begins with Pleistocene man whose material remains have been found in the plateau of Chota Nagpur, extending in Bihar, Orissa and West Bengal. In this very region have been collected microliths in association with ground

tools. Both Palaeolithic and microlithic industries are related to Peninsular complex. The sections revealing these industries have been carefully studied. The study of ground tools occupies greater portion of the thesis, as they have been found in large numbers in all the provinces of Eastern India, and there are, also, many problems that have been linked up with them. The terminology of these tools is first defined, and then follows a descriptive account from region to region. An attempt is made to clarify the various problems related to them, and on the basis of the available data the typically Indian types of tools have been separated from the foreign types. As there is much confusion over these foreign types, it was considered necessary to investigate thoroughly into the problem of their appearance in India. A complete study has, therefore, been made of the available materials from Yunnan, Indo-China, Siam, Malaya and Burma, the countries which immediately concern our problem. Our investigations show that these foreign types arrived late in India, possibly well within the historical period, and that the archaological context does not favour the view of their being brought by migration of any people. With these findings, which are based wholly on archaeological evidence, our study closes.

Prehistory and Protohistory of Eastern India

The Quaternary Period in South Asia has a very prolonged and diverse history. Within this region, India represents various technological and cultural phases of hominin occupation adapting to different ecological zones throughout the Quaternary Period. The earliest records of this occupation can be traced back to 1.5 Ma ago and possibly to c. 2 Ma ago. Archaeological evidence has been reported from all known phases in India, showing a continuous record of occupation from the Early Pleistocene onwards and reflecting adaptation by multiple hominin species over time. This book aims to highlight recent advances in the Quaternary geoarchaeology by showcasing diverse methods such as archaeology, geology, palaeoclimatology, sedimentology, GIS, remote sensing and taphonomy. It presents a collection of papers that address various geoarchaeological aspects from different regions in India, within the time frame of the Early Pleistocene to Anthropocene. This volume provides an opportunity for new data to be disseminated, particularly by young researchers and, within the framework of worldwide research issues, it promotes new geoarchaeological perspectives from India.

Quaternary Geoarchaeology of India

This volume brings together a group of authors that address the question of the first out of Africa into Asia c. 2 Ma. The scope of the book is comprehensive as it covers almost every major region of Asia. The primary goal of this volume is to provide an updated synthesis of the current state of the Asian paleoanthropological and paleoenvironmental records. Papers include detailed studies of the theoretical constructs underlying the move out of Africa, including detailed reconstructions of the paleoenvironment and possible migration routes. Other papers detail the Plio-Pleistocene archaeological and hominin fossil records of particular regions.

Asian Paleoanthropology

The book highlights the empirical work in diverse archaeological areas of Eastern India & deals with related problems of the region. Like new.

Neolithic Culture of Eastern India

Volume Three offers 1643 annotated records on publications regarding the art and archaeology of South Asia, Central Asia and Tibet selected from the ABIA Index database at www.abia.net which were published between 2002 and 2007.

Palaeolithic Industries of Bhimbetka, Central India

This Monograph Presents, In A Concise But Comprehensive Manner, A Syncretic View Of The Latest Information On Various Aspects Such As Tools And Technologies, Settlement And Subsistence Patterns, Ecological Background And Distributional Configuration In Respect Of The Stone Age And The Chalcolithic Cultures Outside The Harappan Zone. The Megalithic Cultures Of Peninsular India And The Deccan Too Find A Place In The Book

Prehistory and Protohistory of Eastern India

When we think of archaeology, most of us think first of its many spectacular finds: the legendary city of Troy, Tutankhamun's golden tomb, the three-million-year-old footprints at Laetoli, the mile-high city at Machu Picchu, the cave paintings at Lascaux. But as marvelous as these discoveries are, the ultimate goal of archaeology, and of archaeologists, is something far more ambitious. Indeed, it is one of humanity's great quests: to recapture and understand our human past, across vast stretches of time, as it was lived in every corner of the globe. Now, in *The Oxford Companion to Archaeology*, readers have a comprehensive and authoritative overview of this fascinating discipline, in a book that is itself a rare find, a treasure of up-to-date information on virtually every aspect of the field. The range of subjects covered here is breathtaking--everything from the domestication of the camel, to Egyptian hieroglyphics, to luminescence dating, to the Mayan calendar, to Koobi Fora and Olduvai Gorge. Readers will find extensive essays that illuminate the full history of archaeology--from the discovery of Herculaneum in 1783, to the recent finding of the "Ice Man" and the ancient city of Uruk--and engaging biographies of the great figures in the field, from Gertrude Bell, Paul Emile Botta, and Louis and Mary Leakey, to V. Gordon Childe, Li Chi, Heinrich Schliemann, and Max Uhle. The Companion offers extensive coverage of the methods used in archaeological research, revealing how archaeologists find sites (remote sensing, aerial photography, ground survey), how they map excavations and report findings, and how they analyze artifacts (radiocarbon dating, dendrochronology, stratigraphy, mortuary analysis). Of course, archaeology's great subject is humanity and human culture, and there are broad essays that examine human evolution--ranging from our early primate ancestors, to *Australopithecus* and *Cro-Magnon*, to *Homo Erectus* and *Neanderthals*--and explore the many general facets of culture, from art and architecture, to arms and armor, to beer and brewing, to astronomy and religion. And perhaps most important, the contributors provide insightful coverage of human culture as it has been expressed in every region of the world. Here entries range from broad overviews, to treatments of particular themes, to discussions of peoples, societies, and particular sites. Thus, anyone interested in North America would find articles that cover the continent from the Arctic to the Eastern woodlands to the Northwest Coast, that discuss the Iroquois and Algonquian cultures, the hunters of the North American plains, and the Norse in North America, and that describe sites such as Mesa Verde, Meadowcroft Rockshelter, Serpent Mound, and Poverty Point. Likewise, the coverage of Europe runs from the Paleolithic period, to the Bronze and Iron Age, to the Post-Roman era, looks at peoples such as the Celts, the Germans, the Vikings, and the Slavs, and describes sites at Altamira, Pompeii, Stonehenge, Terra Amata, and dozens of other locales. The Companion offers equally thorough coverage of Africa, Europe, North America, Mesoamerica, South America, Asia, the Mediterranean, the Near East, Australia and the Pacific. And finally, the editors have included extensive cross-referencing and thorough indexing, enabling the reader to pursue topics of interest with ease; charts and maps providing additional information; and bibliographies after most entries directing readers to the best sources for further study. Every Oxford Companion aspires to be the definitive overview of a field of study at a particular moment of time. This superb volume is no exception. Featuring 700 articles written by hundreds of respected scholars from all over the world, *The Oxford Companion to Archaeology* provides authoritative, stimulating entries on everything from bog bodies, to underwater archaeology, to the Pyramids of Giza and the Valley of the Kings.

Archaeology of Eastern India

History of an ancient kingdom in north India.

Archaeology of Orissa

Jharkhand, the land of forest, named by the people of the neighboring plains, had been a safe haven of the indigenous peoples until the sixteenth century when the process of central state formation began to grow out of the nontribal matrix in the region. The states that emerged then fell under the direct influence and control of the great empires of successive periods that encroached upon the resources

and lives of the indigenous peoples. They disrupted their egalitarian social system and their culture based upon a symbiotic relationship with their environment, forcing the indigenous people to retreat to even more inhospitable regions to rebuild their social structure. However, they were never able to fully escape the ever-increasing boundaries of the state, which eventually stripped the Jharkhand of its resources and left its people peasants. The modern Jharkhand movement, a continuation of the peoples' resistance to the encroaching state, has been widely covered in the media and academic circles. Various analytical reports, academic interpretations and political explanations, often holding contradictory views, have been published over a period exceeding the last five decades. The production of such a huge corpus of literature shows the strength of the movement, and the immense significance of the issues. Containing contributions by leading social scientists and activists, this volume furthers the discourse on the relationship between mainstream nationalism and the indigenous identity often termed ethnicity, as it relates to the nation state. In doing so, it helps civil society understand the relevance of autonomy and identity of the indigenous peoples of the country as a whole. The basic line of inquiry concerns the issues (dispossession from life supporting resources of land, forest, water and identity), the main cause (internal colonialism) and the remedy (provision of autonomy).

Dictionary Catalog of the Oriental Collection

UNESCO pub. Monographic collection of case studies on interethnic relations trends in Chota Nagpur, (India), the Philippines and New Zealand - analyses relationships between different tribal peoples and followers of different religions, focusing on social conflict in India, examines cultural factors pertaining to Chinese and Islamic ethnic groups in the Philippines and considers effect of land tenure change in New Zealand involving incorporation of Maori land ownership. Maps, references and statistical tables.

Status of Prehistoric Studies in the Twenty-first Century in India

The first book-length overview of agricultural development in the ancient world A Companion to Ancient Agriculture is an authoritative overview of the history and development of agriculture in the ancient world. Focusing primarily on the Near East and Mediterranean regions, this unique text explores the cultivation of the soil and rearing of animals through centuries of human civilization—from the Neolithic beginnings of agriculture to Late Antiquity. Chapters written by the leading scholars in their fields present a multidisciplinary examination of the agricultural methods and influences that have enabled humans to survive and prosper. Consisting of thirty-one chapters, the Companion presents essays on a range of topics that include economic-political, anthropological, zooarchaeological, ethnobotanical, and archaeobotanical investigation of ancient agriculture. Chronologically-organized chapters offer in-depth discussions of agriculture in Bronze Age Egypt and Mesopotamia, Hellenistic Greece and Imperial Rome, Iran and Central Asia, and other regions. Sections on comparative agricultural history discuss agriculture in the Indian subcontinent and prehistoric China while an insightful concluding section helps readers understand ancient agriculture from a modern perspective. Fills the need for a full-length biophysical and social overview of ancient agriculture Provides clear accounts of the current state of research written by experts in their respective areas Places ancient Mediterranean agriculture in conversation with contemporary practice in Eastern and Southern Asia Includes coverage of analysis of stable isotopes in ancient agricultural cultivation Offers plentiful illustrations, references, case studies, and further reading suggestions A Companion to Ancient Agriculture is a much-needed resource for advanced students, instructors, scholars, and researchers in fields such as agricultural history, ancient economics, and in broader disciplines including classics, archaeology, and ancient history.
