Forest Vegetation Characteristics of Indian Hills

Plants personify the divine— The Rig Veda (X.97) Trees and plants have long been held sacred to communities the world over. In India, we have a whole variety of flora that feature in our myths, our epics, our rituals, our worship and our daily life. There is the pipal, under which the Buddha meditated on the path to enlightenment; the banyan, in whose branches hide spirits; the ashoka, in a grove of which Sita sheltered when she was Ravana's prisoner; the tulsi, without which no Hindu house is considered complete; the bilva, with whose leaves it is possible to inadvertently worship Shiva. Before temples were constructed, trees were open-air shrines sheltering the deity, and many were symbolic of the Buddha himself. Sacred Plants of India systematically lays out the sociocultural roots of the various plants found in the Indian subcontinent, while also asserting their ecological importance to our survival. Informative, thought-provoking and meticulously researched, this book draws on mythology and botany and the ancient religious traditions of India to assemble a detailed and fascinating account of India's flora.

Biodiversity most commonly refers to the number and variety of distinct organisms (species) living on the Earth. Biological variety encompasses all life forms on earth including species of plants, animals and microorganisms and the ecosystem and ecological processes. Biodiversity stands for the number, variety and variability of living organisms. Biodiversity areas are featuring outstanding concentrations of species, and experiencing incomparable loss of habitat. It was observed recently that the present 25 hotspots of the world have been raised to 34 hotspots with a new list of 9 new hotspots in the great range of the Himalayas and the island nation of Japan. In general, the 34 important areas once covered 15.70% of the Earth's land surface. In total, 86% of the hotspots have already been destroyed, such that the intact remnants of the hotspots now cover only 2.30% of the Earth's land surface. These areas together, now cover 1.4% of the land on the Earth. Tropical forests appear in 15 hotspots, Mediterranean-type zones in 5 and 9 hotspots are majorly of islands. 16 hotspots are in tropical area, about 20% of the human population lives in the hotspot regions. India is one of the leading hotspots in terms of endemics. The three hotspot of Biodiversity in India are i) Eastern Himalaya harbouring 9,000 species of plants with 3500 endemic species; ii) Western Ghats possessing 5800 plant species with about 2000 endemics; and iii) The Andaman and Nicobar Islands harbour about 83% endemic species. The Western Ghats of India extends upto 1,80,000 sq km, extraordinarily rich in biodiversity. The existing forests are highly fragmented and facing the prospect of increasing degradation. The Western Ghats cover the portion of the Gujarat, Maharashtra, Kerala, Karnataka and Tamilnadu. Keeping all these in minds, the present book *Plant Biodiversity, Ethnobotany and Anthropogenic Interventions of Western Ghats Forests – Saputara and Purna* covers an in-depth and systematic study of forest vegetation in terms of community structure analysis, qualitative community structure, quantitative community structure, ethnobotanical studies, and anthropogenic pressures in biodiversity rich forests (Saputara and Purna), a northern extreme regions of Western Ghats. The book would definitely be the need of an hour for forest managers, forest conservationists, policy makers, and decision authorities to prevent the unrestrained exploitation of forest biodiversity and resources, destruction of potential forested habitats, and uncontrolled interactions of man and technology with forest ecosystems of the world.

A Guide to Planning for Community Character adds a wealth of practical applications to the framework that Lane Kendig describes in his previous book, *Community Character*. The purpose of the earlier book is to give citizens and planners a systematic way of thinking about the attributes of their communities and a common language to use for planning and zoning in a consistent and reliable way. This follow-up volume addresses actual design in the three general classes of communities in Kendig's framework—urban, suburban, and rural. The author's practical approaches enable designers to create communities "with the character that citizens actually want." Kendig also provides a guide for incorporating community character into a comprehensive plan. In addition, this book shows how to use community character in planning and zoning as a way of making communities more sustainable. All examples in the volume are designed to meet real-world challenges. They show how to design a community so that the desired character is actually achieved in the built result. The book also provides useful tools for analyzing or measuring relevant design features. Together, the books provide a comprehensive treatment of community character, offering both a tested theory of planning based on visual and physical character and practical ways to plan and measure communities. The strength of this comprehensive approach is that it is ultimately less rigid and more adaptable than many recent "flexible" zoning codes.

"This Handbook provides a state-of-the-art exploration of several key dynamics in current studies of the Buddhist tradition with a focus on practice. Embodiment, materiality, emotion, and gender shape the way most Buddhists engage with their traditions, in contrast to popular representations of Buddhism as spiritual, disembodied, and largely devoid of ritual. This volume highlights how practice often represents a fluid, dynamic, and strategic means of defining identity and negotiating the challenges of everyday life. Essays explore the transformational aims of practices that require practitioners to move, gesture, and emote in prescribed ways, including the ways that scholars' own embodied practices are integral to their research methodology. The chapters are written by acknowledged experts in their respective subject areas and taken together offer an overview of current thinking in the field. The volume is of particular value to scholars who seek an orientation to current perspectives on important conceptual, theoretical, and methodological concerns that are shaping the field in areas outside their primary expertise. The inclusion of substantial, up-to-date bibliographies also makes the volume an important guide to current scholarship"--

The last frontier: people and forests in Mizoram details the relationship between the people and their environment, and between the environment and development. It is set in Mizoram, one of the seven states of the ecologically complex north-eastern region, a land where society and culture present a fascinating blend of tradition and modernity whose history and polity varies from that of most other parts of India. The book traces the environmental history of Mizoram, beginning in the nineteenth century, through colonial rule and into the post-Independence period. It examines the nature of biophysical resources and the influence of human activities on them. Finally, the management of forests by people and the state is analysed, including a detailed discussion on the system of shifting cultivation. Book Excerpt: ...a transformation scene at a pantomime. In the midst of this glade the stream is crossed by a wooden bridge. At a spot 2 miles above this the path, leaving the Sarju, takes a sharp turn to the

left, and begins a steep ascent of 5 miles up the Dhakuri mountain. The base of this hill is well wooded. Higher up the trees are less numerous. On the ridge the rhododendron and oak forest alternates with large patches of grassland, on which wild raspberries and brightly-coloured alpine flowers grow. From the summit of the Dhakuri mountain a magnificent panorama delights the eye. To the north is a deep valley, above which the snow-clad mountains rise almost precipitously. Towering above the observer are the peaks of the highest mountains in British territory. The peaks and 14,000 feet of the slopes are covered with snow. Below the snow is a series of glaciers: these are succeeded by rocks, grass, and stunted vegetation until the tree-line is reached. To the south lies the world displayed. Near at ha..

University Botany-iii Is A Comprehensive Text Book For Students Of 3Rd Year B.Sc Botany. The Book Is Written Strictly In Accordance With Revised Common Core Syllabus Adopted By All The Universities In Andhra Pradesh. Every Care Has Been Taken To Present The Subject In A Simple Language And In A Profusely Illustrated Manner For Better Understanding. The Book Is Divided Into Three Parts. Part A Deals With The Morphology, Taxonomy And Economic Importance Of Different Families. It Also Deals With Basic Rules Of Nomenclature And Systems Of Classifications Of Angiosperm Plants. A Brief Account Of Modern Trends In Taxonomy And Basics Of Ethnobotany Are Also Given. Part B Deals With The Reproduction And Development Of Angiosperm Plants. Microsporogenesis And Megasporogenesis And Fertilization Are Discussed In Different Chapters. Brief Description Of Development Of Endosperm And Embryo Formed Sixth Seventh Chapters Respectively. An Introduction To Palynology With Special Reference To A Few Families Is Also Given. Part C Deals With The Plant Water Relations, Mineral Nutrition, Plant Metabolism With Respect To Photosynthesis, Respiration And Nitrogen Metabolism Are Given. Growth And Development Of Angiosperm Plant With Reference To Growth Substances And Light Are Discussed. Fruit Ripening, Seed Dormancy And Germination Also Formed This Part. Plant Life In Relation To Environmental Stress Is Given In Last Part Of This Section.

This book demonstrates the measurement, monitoring, mapping and modelling of soil pollution and land resources. This book explores state-of-the-art techniques based on open sources software & R statistical programming and modelling in modern geo-computation techniques specifically focusing on the recent trends in data mining/machine learning techniques and robust modelling in soil resources. Soil and agricultural systems are an integral part of the global environment and human well being, providing multiple goods and services essential for people worldwide and crucial for sustainable development. Soil contamination is an environmental hazard and has become a big issue related to environmental health. The challenge of the twenty-first century is to reduce the contaminant load and bring it to below permissible level. The contamination is not only a problem affecting local environments at the place of occurrence but also spreading to other regions because of easy transportation of pollutants. This leads to direct and indirect contamination of land and aquatic systems, surface water and groundwater, inducing significant risks for natural ecosystems. In this context, the spatial modelling, prediction, efficient use, risk assessment, protection and management of soil resources in the agriculture system are the key to achieving sustainable development goals and ensuring the promotion of an economically, socially and environmental sustainability future. The aim of this book on soil contaminants and environmental health: application of geospatial technology is to identify the soil and sediment quality, sources of contaminants and risk assessment and focuses on the decision-making and planning point of view through GIS data management techniques. This book covers major topics such as spatial modelling in soil and sediments pollution and remediation; radioactive wastes, microbiology of soil and sediments, soil salinity and sodicity, pollution from landfill sites, soil erosion and contamination from agricultural activities, heavy metal pollution and health risk; environmental impact and risk assessment, sustainable land use, landscape management and governance, soil degradation and risk assessment, agricultural soil pollution, pollution due to urban activities, soil pollution by industrial effluents and solid wastes, pollution control and mitigation in extreme environments. The content of this book is of interest to researchers, professionals and policy-makers whose work is in soil science and agriculture practices. The book equips with the knowledge and skills to tackle a wide range of issues manifested in geographic data, including those with scientific, societal and environmental implications.

This volume is devoted to compiling recent advancements, methodological improvements, new processing techniques, integration methods and rigorous applications associated with conceptual techniques on the conservation and monitoring of forest resources for a scientific audience, with a focus on cases and applications in India. The primary objective of the book is to advance the scientific understanding of the recent trends and technological improvements in forest conservation, management and related research themes in forest resources and human-wildlife interactions. The book is organized into five sections: (I) Forest Conservation Ecology (II) Forest Conservation and Society (III) Forest Management (IV) Forest Monitoring using GIS and Remote Sensing and (V) Human Wildlife Conflicts. It covers various research themes related to forestry, wildlife, habitat fragmentation, forest management and human-wildlife conflict research, and therefore will be beneficial to a diverse range of researchers, scientific organizations, wildlife scientists, biologists, ecologists and planners in the fields of wildlife and forestry. The book will further be of use to post-graduates, PhD research scholars, professors, geospatial experts, modellers, foresters, agricultural scientists, biologists, ecologists, environmental consultants and big data compilers.

The Diversity of Victorian Literature

Seminar paper from the year 2005 in the subject English Language and Literature Studies - Literature, grade: 1, Ernst Moritz Arndt University of Greifswald (IfAA), 17 entries in the bibliography, language: English, abstract: The Victorian Age is marked by enormous changes. Mark Twain expressed it this way: "and yet in a good many ways the world has moved farther ahead since the Queen was born than it moved in all the rest of the two thousand put together." (Abrams 61993 : 891). Besides industrial and social changes, the era also saw a growth in literature, and great authors like Charles Dickens or Oscar Wilde who are still read today. Generally, the term 'Victorian' marks the time of Queen Victoria's reign from 1837 till 1901, but it is often extended and for many historians it started with the passage of the first Reform Bill in 1832. Since the era comprises about seventy years, many drastic changes occurred during this time, and the distinguishing characteristics of the individual authors cannot be combined into a general mood. Consequently one cannot call it a homogenous period, and it is necessary to distinguish it into three different parts. Since the transitions were smooth, the exact division may differ between historians. The early phase is a period of changes and growth, but it also saw a depression and demonstrations of workmen. In the 1850s the Great Exhibition in 1851 and Darwin's "On the Origin of the Species" in 1859 can be seen as the beginning of the middle period, a time of national

prosperity. England was the leading industrial power, and English confidence was at its high point. The late Victorian period covers the last two decades of the century. It can be characterized by a general change of the Victorian mood: doubts and fear of decay dominated, and literature started to shatter into various very different forms. This term paper will give a brief overview over the conditions and the literature of the Victorian era. The diversity of the age will be shown and explained. Therefore each genre will be described separately. Furthermore I will summarize the works of major authors and while doing so show the contrasts between them.

Studies in Early Victorian Literature

Studies in Early Victorian Literature: Large Print By Frederic Harrison CHARACTERISTICS OF VICTORIAN LITERATURE That which in England is conveniently described as the Victorian Age of literature has a character of its own, at once brilliant, diverse, and complex. It is an age peculiarly difficult to label in a phrase; but its copious and versatile gifts will make it memorable in the history of modern civilisation. The Victorian Age, it is true, has no Shakespeare or Milton, no Bacon or Hume, no Fielding or Scott-no supreme master in poetry, philosophy, or romance, whose work is incorporated with the thought of the world, who is destined to form epochs and to endure for centuries. Its genius is more scientific than literary, more historical than dramatic, greater in discovery than in abstract thought. We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an enriching experience.

Characteristics of English Literature in Victorian Era

Originally published in 1910, this book provides a detailed introduction to Victorian literature and the context in which it was created. The main body of the text analyses the general trends in poetry and prose during the period, providing individual chapters on major literary figures such as Tennyson, Browning, Dickens and Thackeray. Key aspects in Victorian thought are also discussed, covering a variety of philosophical, theological and scientific ideas. This is a fascinating text that will be of value to anyone with an interest in Victorian literature and the development of literary criticism.

The Literature of the Victorian Era

Bachelor Thesis from the year 2016 in the subject English Language and Literature Studies - Literature, grade: 3,0, University of Bonn (Anglistik), language: English, abstract: From time immemorial gallant ideals, bravery and fearlessness have been universal characteristics of manliness. In regards to manly ideals of the Victorian Era it is hard to fully grasp all of the ideals that spread through the 19th century. Many different theories and new findings shaped those characteristics of Victorian manliness. Therefore, the ideals of manliness are very divergent. The Victorian man was many things, brave, physically strong, independent and moral. One way to find out more about manly ideals is by examining resources from this time, for example literature. For that reason, this study is concerned with the ideals of manliness during the Victorian Era and its depiction in Late Victorian literature, to be precise, in The Picture of Dorian Gray by Oscar Wilde and Bram Stoker's Dracula.

A View of Victorian Literature

"Looks freshly at facts that have remained marginal to most critics' sense of the literature--the sheer mechanism of artistic and literary reproductions. These essays make an unusual, various, and interesting collection, with appeal to a great many constituencies."--George Levine, author of *Darwin and the Novelists* "This is an exciting collection linked by a series of contemporary critical assumptions and Victorian concerns. . . . For all their reconsideration of theory, the essays are written in a lively, jargon-free style that should give them popular as well as scholarly appeal."--Carole Silver, coeditor of *Socialism and the Literary Artistry of William Morris*

This guide steers students through significant critical responses to the Victorian novel from the end of the nineteenth century to the present day.

Victorian Literature

Mr. Chesterton's contribution to the Home University Library Series is not a discussion of literature in the Victorian Age, but of the significance of the Victorian Age in literature. He takes up separately, it is true, the great names of the period and succeeds in giving a singularly rounded and integral impression of each of several noted writers. But the whole takes on a unity distinct and impressive, due to the author's very clear conception of the age and the part which its literature as a whole played in modern development.

Victorian Literature

"I was born a Victorian; and sympathise not a little with the serious Victorian Spirit." In this engaging and extremely personal account G K Chesterton expounds his views on Victorian literature. Many of his opinions reflect the conventions of the age; however of the Victorian novel he refreshingly comments "it is an art in which women are quite beyond controversy". Equally uncompromising about poets and poetry he does not hesitate to call Tennyson "a provincial Virgil". This book is an important landmark in our understanding of an age which produced some of Britain's most widely enjoyed literature.

The Masters of Victorian Literature, 1837-1897

A classic survey of Victorian literature, this book remains a valuable resource for scholars and students. Walker provides a detailed analysis of major literary movements and figures, including the Brontes, Tennyson, and Dickens. He also explores how social and cultural changes of the era influenced literary production. With its engaging prose and clear insights, this book is an excellent introduction to Victorian literature. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. Victorian Literature

The first collection of criticism devoted to the problem of reading in Victorian literature

The Victorian Novel

The reputation of the Victorian age in England has undergone many vicissitude, but it is now higher than ever. In this important new study, Richard D. Altick, moves us toward an understanding of the social, intellectual, and theological crises that Carlyle and Dickens, Tennyson and Arnold were daily struggling to solve. And the issues were many. Altick brings to the discussion of these complicated questions the lively and sensitive intelligence that his many readers have come to expect. He includes contemporary illustrations and a full reference index.

The Victorian Age in Literature

Over a century after the death of Queen Victoria, historians are busy re-appraising her age and achievements. However, our understanding of the Victorian era is itself a part of history, shaped by changing political, cultural and intellectual fashions. Bringing together a group of international scholars from the disciplines of history, English literature, art history and cultural studies, this book identifies and assesses the principal influences on twentieth-century attitudes towards the Victorians. Developments in academia, popular culture, public history and the internet are covered in this important and stimulating collection, and the final chapters anticipate future global trends in interpretations of the Victorian era, making an essential volume for students of Victorian Studies.

The Victorian Age in Literature

Whilst recognizing and building upon the enormous importance of both Victorian and twentieth-century perceptions of women's roles and the way these relate to assumptions about women's sexuality, this book is also concerned with more recently developed interests in the creation of male gender roles and different concepts of masculinity, and consequently with relations between, and within, the sexes. The second half of the nineteenth century saw a mounting attack upon the middle class family ideal which had been painstakingly developed in the preceding era; but the radicals did not have it all their own way.

Its genius is more scientific than literary, more historical than dramatic, greater in discovery than in abstract thought. In lyric poetry and in romance our age has names second only to the greatest; its researches into nature and history are at least equal to those of any previous epoch; and, if it has not many great philosophers, it has developed the latest, most arduous, most important of all the sciences. This is the age of Sociology: its central achievement has been the revelation of social laws. This social aspect of thought colours the poetry, the romance, the literature, the art, and the philosophy of the Victorian Age. Literature has been the gainer thereby in originality and in force. It has been the loser in symmetry, in dignity, in grace.

'Reader, I murdered him.' JANE STEELE is a brilliant Gothic retelling of JANE EYRE from Edgar-nominated Lyndsay Faye, for fans of *Longbourn* and *Pride and Prejudice* and *Zombies*. 'I loved it' - Elly Griffiths. ** JANE STEELE HAS BEEN NOMINATED FOR AN EDGAR AWARD FOR BEST NOVEL 2017 ** Like the heroine of the novel she adores, Jane Steele suffers cruelly at the hands of her aunt and schoolmaster. And like Jane Eyre, they call her wicked - but in her case, she fears the accusation is true. When she flees, she leaves behind the corpses of her tormentors. A fugitive navigating London's underbelly, Jane rights wrongs on behalf of the have-nots whilst avoiding the noose. Until an advertisement catches her eye. Her aunt has died and the new master at Highgate House, Mr Thornfield, seeks a governess. Anxious to know if she is Highgate's true heir, Jane takes the position and is soon caught up in the household's strange spell. When she falls in love with the mysterious Charles Thornfield, she faces a terrible dilemma: can she possess him - body, soul and secrets - and what if he discovers her murderous past?

The Victorian Age in Literature

Although the Brontës have long fascinated readers of fiction and biography, their poetry was all too little known until this pioneering selection by Stevie Davies, the novelist and critic. Charlotte (1816-1855) is certainly a competent poet, and Anne (1820-1849) developed a distinctive voice, while Emily (1818-1848) is one of the great women poets in English. Read together with their novels, the poems movingly elucidate the ideas around which the narratives revolve. And they surprise us out of our conventional notions of the sisters' personalities: Emily's rebelliousness, for example, is counterbalanced here by great tenderness. This selection of over seventy poems gives an idea of the variety of thought and feeling within each author's work, and of the way in which the poems of these three remarkable writers parallel and reflect each other.
