When they're ready to hatch

a metamorphosis

His limbs will develop internally
over the next few weeks

He'll lose his tail

Then he'll be ready to explore land

From Egg to Frog in 7 Weeks! - From Egg to Frog in 7 Weeks! by NatureNorth 8,632,038 views 9 years ago 6 minutes, 58 seconds - The development of Wood **Frog**, (*Lithobates sylvaticus*) **eggs**, to froglets in 49 days, just 7 weeks!

By the end of the day the eggs were already developing. Notice the lines where cell division is occurring.

Egg development has reached the "neural folds" stage. This is the start of the spinal cord and brain. Lots more have hatched, but many remain undeveloped.

The early hatchlings are developing tail fins.

Tadpoles are becoming more active. Gills and suction pads beneath the mouth are still visible.

Gills are no longer visible and the tadpoles are swimming actively.

The aquarium is a busy full of active tadpoles. I removed the undeveloped eggs to keep things cleaner.

On the larger tadpoles the hind limb buds are visible.

Day 44 - Here's a good look at a large tadpole's mouth parts.

Fully formed front legs break through the skin and the body shape becomes frog-like.

The Life Cycle of a Frog: Metamorphosis from Tadpole to Frog for Kids - FreeSchool - The Life Cycle of a Frog: Metamorphosis from Tadpole to Frog for Kids - FreeSchool by Free School 448,110 views 1 year ago 3 minutes, 59 seconds - Frogs, have one of the most fascinating life cycles on the planet.
