Understanding Behaviour and Development in Early Childhood

In this accessible and thought-provoking text, the author examines the behaviour of babies and young children in a developmental context, and takes into account the shifts and changes over time as young children grow and mature. Understanding Behaviour and Development in Early Childhood reveals, for example, how behaviour perceived as 'difficult' in a young child may be the manifestation of a response to emotional, sensory and cognitive experiences. Throughout the book, readers will find a strong emphasis on emotional well-being and the need to place our understanding of behaviour within a developmental time frame. Based on wide ranging professional experience the topics examined and discussed in this insightful book include: what we understand by 'behaviour' how the brain and senses work and mature during early childhood behaviour as a reflection of the child's internal state what emotions are and how we learn what feelings mean to us as individuals how emotions affect our ability to learn how we develop a sense of self. The book provides suggestions for how adults may think about and respond to changes in children's behaviour, and how we may support children in learning how to manage their own behaviour as they grow older and encounter wider and more complex situations. Understanding the meaning of behaviour is a constant challenge for anyone working with children. This developmental approach promotes a helpful reflective stance for practitioners and students working in early childhood education and care.

The Educators' Guide to Whole-school Wellbeing

The Educators' Guide to Whole-school Wellbeing addresses challenges faced by schools wanting to improve wellbeing. While many schools globally now understand the need to promote and protect student wellbeing, they often find themselves stuck – not knowing where to start, what to prioritise, or how to implement whole-school change. This book fills that gap. This book provides companionship through rich stories from schools around the world that have created wellbeing practices that work for their schools. It guides educators through processes that help create individualised, contextualised school wellbeing plans. With chapters addressing 'why wellbeing?', 'what is "whole school?"', change dynamics, measurement, staff wellbeing, coaching, cultural responsiveness, and how to build buy-in, it is the first of its kind. Balancing research and practice for each topic with expert practitioner and researcher insights, this book gives schools access to best-practice guidance from around the world in a user-friendly format, designed for busy educators. What sets the authors apart from the many school wellbeing practitioners globally is their substantial experience working alongside diverse school groups. While many have experience in one school, few work across a multitude of very different schools and clusters, giving these practising academics a unique appreciation for effective, cross-context processes.
