

Rural Transformations And Agro Food Systems The Brics And Agrarian Change In The Global South

[#rural transformation](#) [#agro food systems](#) [#BRICS agrarian change](#) [#Global South agriculture](#) [#developing economies food security](#)

This analysis delves into the profound rural transformations impacting agro-food systems across the Global South. It specifically examines the intricate dynamics of agrarian change within BRICS nations, shedding light on how these developing economies are reshaping global agricultural landscapes and addressing critical issues like food security and sustainable development.

We curate authentic academic textbooks from trusted publishers to support lifelong learning and research.

Thank you for choosing our website as your source of information.

The document Agro Food Systems Global South is now available for you to access. We provide it completely free with no restrictions.

We are committed to offering authentic materials only. Every item has been carefully selected to ensure reliability. This way, you can use it confidently for your purposes.

We hope this document will be of great benefit to you. We look forward to your next visit to our website. Wishing you continued success.

In digital libraries across the web, this document is searched intensively. Your visit here means you found the right place. We are offering the complete full version Agro Food Systems Global South for free.

Rural Transformations and Agro-Food Systems

The economic and political rise of the BRICS (Brazil, Russia, India, China, and South Africa) and Middle-Income Countries (MICs) have important implications for global agrarian transformation. These emerging economies are undergoing profound changes as key sites of the production, circulation, and consumption of agricultural commodities; hosts to abundant cheap labour and natural resources; and home to growing numbers of both poor but also, increasingly, affluent consumers. Separately and together these countries are shaping international development agendas both as partners in and potential alternatives to the development paradigms promoted by the established hubs of global capital in the North Atlantic and by dominant international financial institutions. Collectively, the chapters in this book show the significance of BRICS countries in reshaping agro-food systems at the national and regional level as well as their global significance. As they export their own farming and production systems across different contexts, though, the outcomes are contingent and success is not assured. At the same time, BRICS may represent a continuation rather than an alternative to the development paradigms of the Global North. The chapters were originally published in a special issue of Third World Thematics: A TWQ Journal.

BRICS and MICs: Implications for Global Agrarian Transformation

The economic and political rise of the BRICS countries (Brazil, Russia, India, China and South Africa), and powerful middle-income countries (MICs) such as Argentina, Indonesia and Turkey, has far-reaching implications for global agrarian transformation. These countries are key sites of agricultural commodity production, distribution, circulation and consumption and are contributing to major shifts in the character of agro-food systems. This comprehensive collection explores these issues through the lens of critical agrarian studies, which examine fundamental social change in, and in relation to, rural

worlds. The authors explore key themes such as the processes of agrarian change associated with individual countries within the grouping, the role and impact of BRICS countries within their respective regions, the role of other MICs within these regions and the rising importance of MICs within global and regional agro-food systems. The book encompasses a wide variety of case studies, including the expansion of South African agrarian capital within Africa; Brazil as a regional agro-food power and its complex relationship with China, which has been investing heavily in Brazil; the role of BRICS and MICs in Bolivia's soy complex; crop booms within China; China's role in land deals in Southeast Asia; and Vietnamese investment in Cambodia. This book will be of interest to students and researchers of critical agrarian studies, with a focus on BRICS and MICs. It was originally published as a special issue of the journal *Globalizations*.

2017 The State of Food and Agriculture

One of the greatest challenges today is to end hunger and poverty while making agriculture and food systems sustainable. The challenge is daunting because of continued population growth, profound changes in food demand, and the threat of mass migration of rural youth in search of a better life. This report presents strategies that can leverage the potential of food systems to become the engine of inclusive economic development and rural prosperity in low-income countries. It analyses the structural and rural transformations now under way, and examines the opportunities and challenges they present to millions of small-scale food producers. It shows how an "agroterritorial" planning approach, focused on connecting cities and towns and their surrounding rural areas, combined with agro-industrial and infrastructure development can generate income opportunities throughout the food sector and underpin sustainable and inclusive rural transformation.

Handbook on Urban Food Security in the Global South

The ways in which the rapid urbanization of the Global South is transforming food systems and food supply chains, and the food security of urban populations is an often neglected topic. This international group of authors addresses this profound transformation from a variety of different perspectives and disciplinary lenses, providing an important corrective to the dominant view that food insecurity is a rural problem requiring increases in agricultural production.

A multi-billion-dollar opportunity – Repurposing agricultural support to transform food systems

Public support mechanisms for agriculture in many cases hinder the transformation towards healthier, more sustainable, equitable, and efficient food systems, thus actively steering us away from meeting the Sustainable Development Goals and targets of the Paris Agreement. This report sets out the compelling case for repurposing harmful agricultural producer support to reverse this situation, by optimizing the use of scarce public resources, strengthening economic recovery from the COVID-19 pandemic, and ultimately driving a food systems transformation that can support global sustainable development commitments. The report provides policymakers with an updated estimate of past and current agricultural producer support for 88 countries, projected up until 2030. The trends emerging from the analysis are a clear call for action at country, regional and global levels to phase out the most distortive, environmentally and socially harmful support, such as price incentives and coupled subsidies, and redirecting it towards investments in public goods and services for agriculture, such as research and development and infrastructure, as well as decoupled fiscal subsidies. Overall, the analysis highlights that, while removing and/or reducing harmful agricultural support is necessary, repurposing initiatives that include measures to minimize policy trade-offs will be needed to ensure a beneficial outcome overall. The report confirms that, while a few countries have started repurposing and reforming agricultural support, broader, deeper, and faster reforms are needed for food systems transformation. Thus, it provides guidance (in six steps) on how governments can repurpose agricultural producer support – and the reforms this will take.

National processes shaping food systems transformations

Governments and other food system actors from the private sector, civil society, research and education institutions are being called upon to work together to enhance the sustainability, resilience and inclusiveness of food systems. The analysis presented in this study provides an insight into the process and direction of food system transformation, and the key capabilities required. It portrays the interplay of different internal and external dynamics combined with the capacity of food system actors to connect,

forge alliances and commit to specific actions that has enabled countries to move towards a more sustainable food system.

The Changing Face of Rural Space

Although at different stages of development, the countries of the Western Balkans—Albania, Bosnia and Herzegovina, the former Yugoslav Republic of Macedonia, Montenegro, and Serbia—face similar challenges in transforming and modernizing their agricultural food production (agri-food) sectors. Their rural sectors have lagged behind the rest of the economy in growth and poverty reduction, their agri-food sectors are undercapitalized and highly fragmented, and their agro-processing capacities limited. Agricultural trade deficits are widening, climate change is posing increasing risks to farm incomes, and low-cost imports and changing consumer preferences are further eroding competitiveness. Added to this scenario are the challenges and opportunities of adopting the EU 'acquis communautaire' relating to agriculture. Based on recent World Bank reports prepared in collaboration with the Food and Agriculture Organization of the United Nations and the European Commission Directorate General for Agriculture and Rural Development, 'The Changing Face of Rural Space: Agriculture and Rural Development in the Western Balkans' identifies what is constraining agricultural competitiveness in these countries, examines public expenditures in agriculture, and diagnoses key challenges for agricultural policy makers. The book expands on previous findings to provide a strategic policy framework for transforming and modernizing the agri-food sector and, in the context of region's ongoing process of integration with the European Union, creating a dynamic rural space in the Western Balkans. The book offers Western Balkan governments and international donors a shared vision of the goals and directions their agriculture and rural development policies and programs might take.

Food Systems Profile – Eswatini

Food systems are intimately linked to our lives – through the food we eat, our nutrition and health, our livelihoods, jobs, and the environment and natural resources of the planet. The main challenge for food systems is to produce nutritious food for all while preserving our biodiversity and environment and ensuring equitable distribution of wealth. This Food Systems Profile provides a summary of the main food system issues in Eswatini and highlights potential solutions for their sustainable and inclusive transformation. It is the result of a systemic analysis and stakeholders' consultation that was part of a global assessment of food systems in over 50 countries, following a joint initiative by the European Union, Food and Agriculture Organization of the United Nations (FAO) and International Cooperation Centre of Agricultural Research for Development (CIRAD), which aims at catalysing the sustainable and inclusive transformation of food systems.

Peasants and Globalization

This book explores the historical and contemporary process of agrarian transformation in developing countries and its impact upon peasant livelihoods, examining contemporary processes of rural change through an historically-informed analytical lens.

2021 Global food policy report: Transforming food systems after COVID-19

The coronavirus pandemic has upended local, national, and global food systems, and put the Sustainable Development Goals further out of reach. But lessons from the world's response to the pandemic can help address future shocks and contribute to food system change. In the 2021 Global Food Policy Report, IFPRI researchers and other food policy experts explore the impacts of the pandemic and government policy responses, particularly for the poor and disadvantaged, and consider what this means for transforming our food systems to be healthy, resilient, efficient, sustainable, and inclusive. Chapters in the report look at balancing health and economic policies, promoting healthy diets and nutrition, strengthening social protection policies and inclusion, integrating natural resource protection into food sector policies, and enhancing the contribution of the private sector. Regional sections look at the diverse experiences around the world, and a special section on finance looks at innovative ways of funding food system transformation. Critical questions addressed include: - Who felt the greatest impact from falling incomes and food system disruptions caused by the pandemic? - How can countries find an effective balance among health, economic, and social policies in the face of crisis? - How did lockdowns affect diet quality and quantity in rural and urban areas? - Do national social protection systems such as cash transfers have the capacity to protect poor and vulnerable groups in a global crisis? - Can better integration of agricultural and ecosystem policies help prevent the next pandemic?

- How did companies accelerate ongoing trends in digitalization and integration to keep food supply chains moving? - What different challenges did the pandemic spark in Asia, Africa, and Latin America and how did these regions respond?

The future of food and agriculture: Trends and challenges

How can we achieve FAO's original vision of a world free from hunger and malnutrition? The report sheds some light on the nature of the challenges that agriculture and food systems are facing now and throughout the 21st century, and provides some insights as to what is at stake and what needs to be done. What emerges is that "business as usual" is no longer an option but calls for major transformations in agricultural systems, in rural economies and in how we manage our natural resources. The report was undertaken for the quadrennial review of the FAO Strategic Framework and in preparation for the Organization's Medium-Term Plan 2018-2021.

Agrifood systems transformation through a climate change lens

This paper discusses how adapting food production systems to respond to consumer demand for healthier diets is a major opportunity to mitigate and adapt to climate change in agro-rural economies. It also addresses how existing technological solutions for climate change mitigation and adaptation need to create more balance between the production and consumption tiers of agrifood systems. Policy dialogue includes managing trade-offs between different sector and stakeholder interests and exploring synergies rather than focusing on exclusivity and competition. This requires a new framework that goes beyond sector-specific policy development. Political economy issues compound the outcome of evidence-based policy dialogue results. For example, political motivation for exporting protein-rich foods may lead to negative impacts on local food sovereignty and food production for local markets. In this regard, the use of concrete policy dialogue tools (food-based dietary guidelines, land use planning and discussions on a protein production strategy) can facilitate a more interactive policy process. The document also stresses how specific rural transformation efforts (e.g., adopting territorial approaches for conceiving and implementing policies; targeting specific producer and consumer groups; strengthening resource ownership; and empowering women and young people) are an integral part of agrifood systems transformation.

The Transformation of Agri-food Systems

The driving forces of income growth, demographic shifts, globalisation and technical change have led to a reorganisation of food systems from farm to plate. The characteristics of supply chains - particularly the role of supermarkets - linking farmers have changed, from consumption and retail to wholesale, processing, procurement and production. This has had a dramatic effect on smallholder farmers, particularly in developing countries. This book presents a comprehensive framework for assessing the impacts of changing agri-food systems on smallholder farmers, recognising the importance of heterogeneity between developing countries as well as within them. The book includes a number of case studies from Asia, Africa, Latin America and Eastern Europe, which are used to illustrate differences in food systems' characteristics and trends. The country case studies explore impacts on the small farm sector across different countries, local contexts and farm types

Globalising Food

In an increasingly global world, societies are being provisioned from a bewildering array of sources as new countries and new food commodities are drawn into international markets. Globalising Food provides an innovative contribution to the area of political economy of agriculture, food and consumption through a revealing investigation of the globalisation and restructuring of localised agricultural sectors and food systems. The book draws on new theoretical perspectives and wide-ranging case studies from Britain, the USA, India, South Africa, New Zealand and Latin America. The key themes addresses range from giant multinational food corporations, rural industrialisation and World Bank policies, to the regulation of pollution, labour relations, urban food politics and environmental sustainability. Globalising Food offers important insights into the problems, consequences and limits of the industrialisation of agriculture and the provisioning of food in a global world as we approach the new millenium.

Economywide factors affecting agricultural growth and rural transformation: Highlights, lessons learned, and priorities for One CGIAR

At the start of CGIAR Research Program on Policies, Institutions, and Markets (PIM) Phase 2 in 2017, and later during the priority-setting round in 2019, each of the PIM research areas ('flagships') formulated key research questions they aimed to answer and identified theories of change and pathways to achieve impact. In this series, we share highlights of what we have learned and achieved and suggest areas to be explored in the future.

Food Systems Profile – Sierra Leone

The Food System Profile provides a summary of the main food system issues in Sierra Leone and highlights potential solutions for their sustainable and inclusive transformation. The result of a systemic analysis and stakeholders consultation, it is part of a large-scale assessment supported by the European Union, FAO and CIRAD in 50 countries.

Global Food Insecurity

Human-kind and ecological systems are currently facing one of the toughest challenges: how to feed more billions of people in the future within the perspective of climate change, energy shortages, economic crises and growing competition for the use of renewable and non renewable resources. This challenge is even more crucial given that we have not yet come close to achieving the Millennium Development Goal of halving the number of people living in extreme poverty and hunger. Scientists and relevant stakeholders are now voicing a clear message: that multiple challenges the world is facing require innovative, multifaceted, science-based, technological, economic and political approaches in theoretical thinking, decision making and action. With this background central to survival and well-being, the purpose of this volume is to formulate and promote relevant theoretical analysis and policy recommendations. The major perspective of this publication is that paradigm and policy shifts at all levels are needed urgently. This is based on the evidence that agriculture in the 21st century will be undergoing significant demands, arising largely from the need to increase the global food enterprise, while adjusting and contributing to climate change adaptation and mitigation. Global Food Insecurity aims at providing structure to effect achievement of this critically needed roadmap.

Pilot Digital Villages Initiative in Africa

The Digital Villages Initiative (DVI) of the Food and Agriculture Organization of the United Nations (FAO) is a corporate programme aiming to combat hunger, poverty and inequality by fostering digital rural transformation. This is being carried out through the establishment of, or support to 1 000 smart rural villages supplied with the digital services needed for agrifood systems and rural transformation to achieve the Sustainable Development Goals (SDGs). The DVI supports the FAO Strategic Framework 2022–2031, which responds to key global challenges, including those engendered by COVID-19, “a global crisis, which highlighted the critical mandate of FAO to ensure functioning and sustainable agrifood systems that allow for sufficient production and consumption of food” (FAO, 2021). The programme is being implemented in various regions of the world, including Africa. In sub-Africa, it is led by the Regional Office for Africa (RAF) of FAO and is being deployed on a pilot basis in a few countries. Lessons learned will be shared while opportunities for scaling up/replication in other countries will be explored. A call for expressions of interest was made to identify which countries were interested in participating in the initiative. Seven countries responded positively and have been preselected to be part of the initial pilot: Ghana, Kenya, Malawi, Niger, Nigeria, Senegal and Somalia.

Ending extreme poverty in rural areas - Sustaining livelihoods to leave no one behind

Sustainable Development Goal 1, ending poverty in all its forms, everywhere, is the most ambitious goal set by the 2030 Agenda. This Goal includes eradicating extreme poverty in the next 12 years, which will require more focused actions in addition to broad-based interventions. The question is: How can we achieve target 1.1 and overcome the many challenges that lie ahead? By gaining a deeper understanding of poverty, and the characteristics of the extreme rural poor in particular, the right policies can be put in place to reach those most in need. This report presents the contribution that agriculture, food systems and the sustainable use of natural resources can make to securing the livelihoods of the millions of poor people who struggle in our world.

Transforming the Rural

This book analyses the key global processes transforming rural spaces in the early 21st century – financialization; standardization; consumption, and commodification. Through detailed case studies, the book examines why these processes are important, how they work in practice, and the challenges they raise as well as opportunities created.

Improving social protection for rural populations in Europe and Central Asia

FAO's Strategic Framework (2022–2031) envisages the transformation to more efficient, inclusive, resilient, and sustainable agrifood systems for better production, better nutrition, a better environment, and a better life, leaving no one behind. In this scope, FAO promotes inclusive economic growth by reducing inequalities between urban and rural areas, rich and poor countries, men and women to attain a better life for all. This report analyses the specific risks and vulnerabilities faced by rural populations in Europe and Central Asia. It highlights the gaps and barriers concerning social protection in the region, which present challenges for addressing the specific vulnerabilities of rural populations and helping them to better manage risks. The report discusses how social protection programmes should be designed and financed to contribute to more inclusive rural transformation processes, improved nutrition and dietary outcomes, women's empowerment, and other social issues such as child labour. In this scope, the report specifies key entry points for FAO to improve social protection for rural populations in the region. The report concludes that, especially in the post-pandemic period, expanding the coverage, adequacy and comprehensiveness of social protection for rural populations is key to addressing food security and nutrition, rural poverty, developing agriculture, and building resilient and sustainable food systems in Europe and Central Asia.

Agricultural Transformation Centres in Africa - Practical guidance to promote inclusive agro-industrial development

Over the next ten years, the African rural space will be the theatre of profound changes as the activities envisaged for agricultural transformation are drastically scaled up. Increased food demand and changing consumption habits driven by demographic factors, such as population growth and urbanization, are already leading to a rapid increase of net food imports, opening a huge opportunity for the agribusiness sector of many African countries. Against this backdrop and in line with its mission to spur sustainable economic development and social progress, the African Development Bank (AfDB) in 2016 launched Feed Africa, a strategy that is intended to contribute substantially to the transformation of African agriculture by 2025, and to reverse Africa's dependence on imported foods. As part of this strategy, AfDB is promoting the concept of staple crops processing zones (SCPZs), which are agrobased spatial development initiatives, designed to concentrate agro-processing activities within areas of high agricultural potential to boost productivity and integrate the production, processing and marketing of selected commodities. As essential components, SCPZs include an agro-processing hub, a number of agricultural transformation centres (ATCs) and agricultural production areas. The ATCs are designed to link smallholder farmers to the agro-processing hub and are strategically located in high production areas, with the aim of serving as aggregation points to accumulate products from the community to supply the hub for further value addition, or to send them to centres of great demand for distribution and retail to consumers. This study has attempted to assess the feasibility and applicability of the ATC concept to selected regions in Zambia, Côte d'Ivoire and the United Republic of Tanzania. Findings from the field have demonstrated the potential of ATCs to address community needs and constraints for a range of selected value chains, and have helped to identify different ATC models that could work in each specific context.

The central position of agriculture within the 2030 Agenda for Sustainable Development

This paper provides a helpful framing to understand both why and how policy attention and investments should be channeled through agriculture and agrifood systems as key vehicles for achieving the Sustainable Development Goals (SDGs). It illustrates the ways in which agriculture, particularly within the context of food value chains, is uniquely positioned to holistically address the social, economic, and environmental dimensions of sustainable development because of its existing reach and future potential. In this paper's examination of the multiplicity of entry points the sector offers for fostering inclusive and sustainable economic growth, reversing harmful environmental trends, and enhancing the resilience of the poorest and most vulnerable populations, it traces some of the most potent pathways for agricultural policies and interventions to accelerate development outcomes across all country contexts.

Gender and rural transformation

Rural transformation is central to the broader structural transformation process taking place in developing countries — fueled by the globalization of value chains, changing food systems, new technologies, conflict and displacement, and climate change, among other factors. Rural transformation refers to the process whereby rural economies diversify into nonfarm activities, agriculture becomes more capital-intensive and commercially oriented, and linkages with neighboring towns and cities grow and deepen (Berdegue, Rosada, and Bebbington 2014). It can bring about fundamental changes in the way businesses and households organize, such as the commercialization and diversification of agricultural production; increased agricultural productivity; migration; and the emergence of a broader set of rural livelihood activities.

Water Security Across the Gender Divide

This book examines water security as a prime example of how the economic, socio-cultural and political-normative systems that regulate access to water reflect the evolving and gendered power relations between different societal groups. Access to water is characterized by inequalities: it depends not only on natural water availability, but also on the respective socio-political context. It is regulated by gender-differentiated roles and responsibilities towards the resource, which are strongly influenced by, among others, tradition, religion, customary law, geographical availability, as well as the historical and socio-political context. While gender has been recognized as a key intervening variable in achieving equitable water access, most studies fail to acknowledge the deep interrelations between social structures and patterns of water use. Proof of these shortcomings is the enduring lack of data on water accessibility, availability and utilization that sufficiently acknowledges the relational nature of gender and other categories of power and difference, like class and socioeconomic status, as well as their comprehensive analysis. This book addresses this major research gap.

Transformation of Agri-Food Systems

'There should be a good market for this book. The topic is very timely and a major theme of the new World Development Report 2008. The editors and contributors are world class.' Derek Byerlee, World Bank
'This is a topic of wide interest and high policy importance. The depth of coverage and excellent synthesis should ensure that the book will have a substantial market in high-level undergraduate and graduate courses in agricultural development. It will have a solid readership among development economists and policy makers as well.' Mark Rosegrant, International Food Policy Research Institute
The driving forces of income growth, demographic shifts, globalization and technical change have led to a reorganization of food systems from farm to plate. The characteristics of supply chains - particularly the role of supermarkets - linking farmers have changed, from consumption and retail to wholesale, processing, procurement and production. This has had a dramatic effect on smallholder farmers, particularly in developing countries. This book presents a comprehensive framework for assessing the impacts of changing agri-food systems on smallholder farmers, recognizing the importance of heterogeneity between developing countries as well as within them. The book includes a number of case studies from Asia, Africa, Latin America and Eastern Europe, which are used to illustrate differences in food systems' characteristics and trends. The country case studies explore impacts on the small farm sector across different countries, local contexts and farm types. Published with FAO

Food Systems Profile – Kenya

Food systems are intimately linked to our lives – through the food we eat, our nutrition and health, our livelihoods, jobs, and the environment and natural resources of the planet. The main challenge for food systems is to produce nutritious food for all while preserving our biodiversity and environment and ensuring equitable distribution of wealth. This Food Systems Profile provides a summary of the main food system issues in Kenya and highlights potential solutions for their sustainable and inclusive transformation. It is the result of a systemic analysis and stakeholders' consultation that was part of a global assessment of food systems in over 50 countries, following a joint initiative by the European Union, FAO, and CIRAD which aims at catalysing the sustainable and inclusive transformation of food systems.

Food Systems Profile – The Lao People's Democratic Republic

Food systems are intimately linked to our lives – through the food we eat, our nutrition and health, our livelihoods, jobs, and the environment and natural resources of the planet. The main challenge for food systems is to produce nutritious food for all while preserving our biodiversity and environment

and ensuring equitable distribution of wealth. This Food Systems Profile provides a summary of the main food system issues in The Lao People's Democratic Republic and highlights potential solutions for their sustainable and inclusive transformation. It is the result of a systemic analysis and stakeholders consultation that was part of a global assessment of food systems in over 50 countries, following a joint initiative by the EU, FAO, and CIRAD which aims at catalyzing the sustainable and inclusive transformation of food systems.

Ireland's journey towards sustainable food systems

The intention of this case study is to learn from the institutional and programmatic processes that have sustained the transformation of Ireland's food system so that other countries might be inspired by ideas and practices that could be potentially adapted to their own journey towards a sustainable food system. The country's trajectory from small-scale farming focused on commodity exports with little value addition, to gradual integration into high-value international supply chains, alongside its current ambition to contribute to solving world hunger, reflect the profound shifts that have taken place within and around the boundaries of Ireland's food system. Ireland's transformation demonstrates the complexity of multiple drivers (policies, investments, market trends and disruptions) simultaneously at play as food systems evolve. At present, the top challenges in agri-food concern the environment, human health and nutrition.

Food systems profile – Bhutan

The Food System Profile provides a summary of the main food system issues in Bhutan and highlights potential solutions for their sustainable and inclusive transformation. The result of a systemic analysis and stakeholders consultation, it is part of a large-scale assessment supported by the European Union, FAO and CIRAD in 50 countries.

Background Notes on Sustainable, Productive and Resilient Agro-Food Systems: Value chains, human capital, and the 2030 Agenda

Agricultural production more than tripled between 1960 and 2015, owing in part to productivity-enhancing technologies and a significant expansion in the use of land, water, and other natural resources for agricultural purposes. Today, more than ever, agriculture faces multiple and complex challenges. It has to provide sufficient, safe, and nutritious food to meet boosting demand by a growing and progressively more prosperous population, and ensure food security for all. Prepared to support the G20 Presidency of Japan and the G20 Agriculture Deputies, these three background notes provide an overview on the following interlinked issues: (i) the policy challenges for strengthening the participation of farmers into modern value chains and promoting value addition, inclusion, sustainability and rural economic growth; (ii) the need for a transformation in the skillset of agricultural workers and a renewed focus on human capital development in agriculture, and (iii) the contribution of agriculture to the realization of the 2030 Agenda for Sustainable Development.

Drivers and disruptors shaping the future of agriculture and the food system in LAC: Climate change and trade tensions

Agri-food production remains vital to the economies in Latin America and the Caribbean (LAC). Food systems are rapidly changing and are driven by income growth, (urban) population growth, shifts in dietary preferences, and agricultural productivity growth. Food systems are also under threat from disruptors like climate change and distorting policies (including trade wars). This paper makes two quantitative, forward-looking assessments for the future of food and agriculture in the LAC region. The first focuses on the long-term prospects - given projected pathways for the main drivers and under the threat of climate change. The second focuses on current vulnerability of LACs agri-food system to short-term disruptors with special reference to impacts of global trade wars and the prospects for reducing that vulnerability. The implications are not uniform across the countries in the region, but vary greatly depending on economic and demographic size, contribution of the agricultural sector to national GDP, natural resource endowments, ecological and climatic characteristics, level of sophistication of rural and agrarian institutions, available technology, farm-size distribution and tenure systems. Policy interventions to address the challenges will need to consider those differences in initial conditions. The foresight assessments are built on IFPRI's core global model frameworks, IMPACT and MIRAGRODEP. They allow to capture the complexity of agri-food system development and the scenario analysis helps quantify the relative importance of the drivers and disruptors of food system change, which in turn

should be of essential to policymakers in setting priorities for steering towards sustainable and stable food systems capable of meeting twenty-first century challenges.

Improving investment in research and innovation to transform agrifood systems in the Global South

Rapid structural transformation and urbanization are transforming agriculture and food production in rural areas across the world. This textbook provides a comprehensive review and assessment of the multi-faceted nature of agriculture and rural development, particularly in the developing world, where the greatest challenges occur. It is designed around five thematic parts: Agricultural Intensification and Technical Change; Political Economy of Agricultural Policies; Community and Rural Institutions; Agriculture, Nutrition, and Health; and Future Relevance of International Institutions. Each chapter presents a detailed but accessible review of the literature on the specific topic and discusses the frontiers in research and institutional changes needed as societies adapt to the transformation processes. All authors are eminent scholars with international reputations, who have been actively engaged in the contemporary debates around agricultural development and rural transformation.

Agriculture and Rural Development in a Globalizing World

Includes papers and case studies presented at a FAO workshop held in Rome, Italy from 8 to 10 October 2003

Globalization of Food Systems in Developing Countries

The subject of food security and land issues in Africa has become one of increased importance and contention over recent years. In particular, the focus has shifted to the role new global South donors - especially India, China and Brazil - are playing in shaping African agriculture through their increased involvement and investment in the continent. Approaching the topic through the framework of South-South co-operation, this highly original volume presents a critical analysis of the ways in which Chinese, Indian and Brazilian engagements in African agriculture are structured and implemented. Do these investments have the potential to create new opportunities to improve local living standards, transfer new technology and knowhow to African producers, and reverse the persistent productivity decline in African agriculture? Or will they simply aggravate the problem of food insecurity by accelerating the process of land alienation and displacement of local people from their land? Topical and comprehensive, *Agricultural Development and Food Security in Africa* offers fresh insight into a set of relationships that will shape both Africa and the world over the coming decades.

Agricultural Development and Food Security in Africa

The recent history of rural economic transformation in Myanmar and the effects of COVID-19 and the military coup in February 2021 provide important lessons for the design and implementation of plans to help the country recover from these scourges. The impoverishment of farming communities in Myanmar during decades of socialist military rule, beginning in the 1960s until the turn of the century, led to an outflux of migrants to neighboring countries. As the country opened up to foreign investment through economic reforms initiated in 2011, rural wages surged and farm mechanization services expanded rapidly. Together with increased remittance flows from migrants, higher rural household incomes drove growth in a wide range of non-farm service enterprises. Nevertheless, agricultural growth was low and most crop subsectors stagnated due to underlying and unresolved structural constraints such as poor infrastructure and inequality in land access. As in many other countries in Asia, border closures and lockdowns instituted to prevent the spread of COVID-19 in early 2020 resulted in widespread employment and income losses. The Myanmar government pro-actively sought to mitigate the impacts through expanded credit to farmers and businesses. By the end of 2020, Myanmar was beginning to recover from the economic stresses of COVID-19. However, the February 2021 military coup resulted in a far more severe economic downturn than COVID-19 due to the collapse of the financial system, the massive resignations by public sector employees, and the prolonged movement restrictions. Coup-induced state failure greatly magnified the health and economic consequences of COVID-19 in terms of poverty, food insecurity, and stalled economic transformation. This paper uses a combination of macro, meso, and micro-level analyses to measure the impacts of COVID-19 and state failure on rural economic transformation through the lens of the agri-food system, and to draw lessons for policies to support broad-based and resilient economic recovery.

Beyond emergency relief: What will it take to ensure a resilient recovery for agriculture and the rural economy of Myanmar

Financialization is one of the key drivers transforming food systems and rural economies globally. This book explores the connection between financialization, food systems, and rural transformation.

The Financialization of Agri-Food Systems

In a time of great agricultural and rural change, the notion of 'multifunctionality' has remained under-theorized and poorly linked to wider debates in the social sciences. This book analyses the extent to which the proposed transition towards post-productivist agriculture holds up to scientific scrutiny, and proposes a modified productivist/non-productivist model that better encapsulates the complexity of agricultural and rural change. By combining existing notions and concepts, this book (re)conceptualizes agricultural change, creating a new transition theory, and a new way of looking at the future of agriculture.

Multifunctional Agriculture

Collection of conference papers on the impact of agricultural development on rural area poverty in developing countries, partic. India - analyses poverty concepts and trends, dynamics of agricultural production, agricultural technology and agricultural price, role of infrastructure development, and relationship between the green revolution and equitable income distribution; considers the agricultural income approach to poverty measurement; reports on the Japanese experience. Graphs, references, statistical tables. Conference held in New Delhi 1982 Apr 11 to 14.

Agricultural Change and Rural Poverty
