[#Retail Impact Assessment](#) [#RIA Methodology](#) [#Retail Planning](#) [#Economic Impact](#) [#Market Analysis](#)

Retail Impact Assessment (RIA) is a crucial process for evaluating the potential economic effects of new retail developments on existing businesses and communities. It involves analyzing factors such as market demand, competition, employment, and local economy to provide a comprehensive understanding of the positive and negative consequences. This assessment helps planners and developers make informed decisions, minimize negative impacts, and maximize the benefits of new retail projects.

Retail Impact Assessment

This book reviews the methodology and emphasises a recommended best practice approach to the application of retail impact assessment. It is a valuable guide for planners and surveyors, new and experienced professionals, and students studying retail planning.

Retail Impact Assessment

Written by a leading expert in the field, this is the first thorough critical review of retail planning policy in Britain (including Scotland and Wales). It covers recent changes in government policy and guidance, and examines retail policy within a broader economic and social context. Planning for Retail Development explains key events and debates in the evolution of retail planning policy, at central and local government levels, since the 1960s and draws contrasts between the 1980s, a period in which retail developers were encouraged by central government to expand away from town centres, and the more recent emphasis on protection and promotion of town centres as the most appropriate location for new development. The book develops a critical evaluation of past and present retail planning policies, based upon analyses of retailers' objectives and of typical consumer shopping behaviour. Relationships between retail planning and wider societal concerns, including sustainable development, social inclusion and urban regeneration are also examined and analysed and guidelines for future policy objectives and content are drawn.

Store Location and Store Assessment Research Edited by R. L. Davies University of Newcastle, UK and D. S. Rogers D. S. R. Marketing Systems Inc., Illinois, USA An invaluable book to students and practitioners in marketing and retailing. This book looks at store location and store assessment research on both sides of the Atlantic from an academic and a practical retailing point of view, and in doing so attempts to fill a gap in an area which has been hitherto poorly documented. It is also an area in which theory and practice have rarely interrelated. This book endeavours to marry the academic contributions that have been made from a largely theoretical perspective to a series of business experiences that have been conducted in practice. In an age of relative store saturation and an abundance of shopping centres accurate store location research and store location assessment is not only advisable but essential. In recent years a coalescence of needs and a sharing of ideas has transpired between the USA and the UK and has provided a rationale for this collection of Anglo-American essays which give a balanced view of the theory and the practice that make up the subject. Retail Impact Assessments

The last two decades have witnessed a rapid increase in retail sector development, particularly the growth of regional retail centres. The concentration of new retail centres in out-of-town locations (usually occupying green field sites) and away from city centre locations has fuelled growing concerns about the threats they pose to cities and towns, and the ecological and socio-economic conflicts that arise from their uncontrolled growth. Sustainable Regional Retail Centres is the first book to take a comprehensive look at regional retail centres in relation to environmental, social and economic sustainability. The book presents an overview of the development of regional shopping centres, including a vital analysis of consumer behaviour, trends and preferences. It defines their main characteristics and related impacts and explores the various sectors' involvement in their development and management. The sustainability of regional retail centres is questioned, and ways to diminish their negative impacts are presented. The authors then present an innovative assessment model which can be used to assess sustainability and incorporate it into plans for future retail centres, and into modifications of existing centres. Regional shopping centres consist of a complex amalgam of energy consumption, existing buildings and transport systems. The model presented by the authors is the first system to address the issue of sustainability for regional shopping centres, taking into consideration all these factors over the centre's whole lifespan. The authors use the model to present case-studies of sustainability assessments from out-of-town retail centres and then describe how the method can be adapted for use internationally and for in-town retail centres. The book provides an essential tool for designers, developers and regulators - offering checklists and practical guidelines for the future of shopping centres in terms of function, building quality, sustainability performance and impact on planning and design issues.

Shopping Destination Choice Behaviour and Retail Impact Assessment in Taiwan

Changes in the philosophy of planning and the political influences behind it have led to an increasingly ambivalent approach to retail and commercial matters and a lack of clear goals and objectives as to what both central government and the local authorities should be concerned with. It begins by examining the growth of office blocks and shopping centres, and goes on to analyse and criticise the existing planning processes, suggesting alternative procedures. It looks at the dual needs of development on the one hand and renovation and redevelopment on the other and discusses how these should be dealt with in the future. More specific problems are also examined: the impact created by new shopping schemes, the decline of small shops and related activities, the conflict over transport demands and provisions and the special physical needs of particular urban and rural environments. Throughout, the argument is supported by detailed examples of particular developments. Originally published 1984.

The Social Effects of Retail Decentralisation

The economic, social and environmental implications of recent changes in retailing constitute significant contemporary issues, which are the focus of this timely book. Retail change deals with the internationalization of retailing, the development of shopping centres in the city and at suburban sites, and the growth of leisure shopping. It provides an up-to-date review of the central questions faced by undergraduate students in planning, business studies and geography. The retail environment of developed economies has undergone revolutionary change since the 1970s, and the process is far from over. In the book the major elements central to contemporary retail change are developed across the whole spectrum of spatial scales relevant to present-day society. The first part adopts an economic perspective and focuses on the process of business concentration and its increasingly international orientation. This is followed by analyses of change in the urban region, concentrating on the emergence of the great variety of new retail forms associated with retail decentralization. The planning implications of retail change are developed in the third part. The future of the city-centre and other traditional shopping centres is examined in the light of challenges presented by new facilities. Alternative future scenarios contingent upon *laissez-faire* or interventionist government policy controls are also discussed. The social implications of retail change are developed in the final section. All students and researchers concerned with the evolution and development of the retail sector of advanced economies will welcome this book as an authoritative source of contemporary findings and commentary. Rosemary D. Bromley and Colin J. Thomas are Lecturers in Geography at the University College of Swansea, Wales.. This book is intended for undergraduate students taking courses in economic geography and retailing in departments of geography, business studies, planning, etc.

The Social Effects of Retail Decentralisation

The proper understanding and managing of project risks and uncertainties is crucial to any organization. It is paramount that all phases of project development and execution are monitored to avoid poor project results from meager economics, overspending, and reputation. Supply Chain Management Strategies and Risk Assessment in Retail Environments is a comprehensive reference source for the latest scholarly material on effectively managing risk factors and implementing the latest supply management strategies in retail environments. Featuring coverage on relevant topics such as omni-channel retail, green supply chain, and customer loyalty, this book is geared toward academicians, researchers, and students seeking current research on the challenges and opportunities available in the realm of retail and the flow of materials, information, and finances between companies and consumers.

Using GIS and Spatial Modelling for Retail Planning and Economic Impact Assessment

Seminar paper from the year 2009 in the subject Business economics - Miscellaneous, grade: 1,0, Ashcroft International Business School Cambridge (Anglia Ruskin University), language: English, abstract: This work analyses the growing environmental consciousness and an ever more present environmental responsibility within the British population and explains its impact on major grocery retailers in the country. The nature of these changes as well as factors which accelerate this development are discussed. Furthermore, it is explained how the different grocery retailers respond to the environmental claims of their customers. The work concludes with an assessment of possible future developments.

Retail In A New World: Recovering From The Pandemic That Changed The World provides an assessment of the issues and opportunities for retailers that emerged during the Covid-19 pandemic, proposing tools and frameworks that serve as basis to survive the pandemic and thrive in a post-pandemic scenario.

The Effects of Major Out of Town Retail Development

The National Planning Policy Framework 2012 sets out the Government's planning policies for England in achieving sustainable development and how these are expected to be applied. It sets out the requirements for the planning system only to the extent that it is relevant, proportionate and necessary to do so. It provides a framework within which local people and their accountable councils can produce their own distinctive local and neighbourhood plans, which reflect the needs and priorities of their communities. This Framework does not contain specific policies for nationally significant projects for which particular considerations apply. Divided into thirteen chapters, with three annexes, it looks at the following areas, including: building a competitive economy; ensuring town centre vitality; supporting a high quality communications infrastructure; delivering high quality homes; protecting the Green Belt;

meeting the challenges of climate change, flooding and coastal change; conserving the natural and historic environments and facilitating the sustainable use of minerals.

Impact Assessment of an Out-of-centre Shopping Centre

Almost weekly, the news is full of stories about disappearing retail chains. From House of Fraser and BHS to Toys'R'Us and Sears, recognised names are vanishing overnight – as such large organizations disappear, so the malls, shopping centres, high streets and main streets become emptier and less appealing to visit. The retail sector is hugely important in terms of job numbers: in the US, it employs around 30 million people (directly and indirectly); in the UK, around 10 million. As such, anything that jeopardises the retail sector will have a deep and lasting impact on millions of lives, as well as on public policy. While many blame the 'Amazon effect', this is an oversimplification. Deeper forces are at work that are changing people's relationships with brands, the balance of power between producers and consumers, and the whole nature of the supply chain that has existed since the industrial revolution. Retail Therapy offers a comprehensive analysis of these forces and their impact on the world of retailing. More importantly, it presents a cogent analysis of the longer term trends that are shaping retailing, and outlines a clear road map for sustainable success in the future.

Big Box USA presents a new look at how the big box retail store has dramatically reshaped the US economy and its ecosystems in the last half century. From the rural South to the frigid North, from inside stores to ecologies far beyond, this book examines the relationships that make up one of the most visible features of late twentieth-century and early twenty-first-century American life. The rise of big box retail since the 1960s has transformed environments on both local and global scales. Almost everyone has explored the aisles of big box stores. The allure of “everyday low prices” and brightly colored products of every kind connect shoppers with a global marketplace. Contributors join a growing conversation between business and environmental history, addressing the ways American retail institutions have affected physical and cultural ecologies around the world. Essays on Walmart, Target, Cabela's, REI, and Bass Pro Shops assess the “bigness” of these superstores from “smokestacks to coat racks” and contend that their ecological impacts are not limited to the footprints of parking lots and manufacturing but also play a didactic role in educating consumers about their relationships with the environment. A model for historians seeking to bring business and environmental histories together in their analyses of merchant capital's role in the landscapes of everyday life and how it has remade human relationships with nature, Big Box USA is a must-read for students and scholars of the environment, business, sustainability, retail professionals, and a general audience.

Retail Location and Retail Planning in Britain

The Organisation Environmental Footprint (OEF) initiative of the European Commission and the Nordic Swan Ecolabel both aim at more sustainable consumption and production. We compared the two schemes in relation to their environmental information concerning the retail sector. The Swan aims to push stores to perform better and to help customers make environmental choices, whereas the OEF aims to create a common Life Cycle Assessment based methodology to assess impacts related to a retailer's product portfolio. Overall, the OEF is considered a broader approach still under development, while the Swan is well-known in the Nordics. Their scopes, relevant impact categories and life cycle stages differed. However, climate change, resource use and biodiversity impacts were significant in both schemes. Possible synergies concern criteria setting, measurement and communication.

Sustainable Regional Retail Centres

In many countries shopping has been transformed from High Street stores to large out-of-town Retail Parks and Shopping Centres. Technology now provides the opportunity for many products and services to be promoted and purchased electronically, particularly via the Internet. This will progress differently for different products, regions, consumer groups, etc. This book presents future scenarios for the retail industry in the light of Internet shopping. Through its unique perspective, it examines developments so far, and through the insight of the author who is one of the leading professionals in shopping centre developments, takes an inspired look at the future of retailing in the next century.

Retail and Commercial Planning (RLE Retailing and Distribution)

This title surveys and sets in context the wide range of research work that has been done on retailing. It concentrates on western industrial societies, particularly Britain and the USA, and considers empirical research, theory and theoretical applications.

Retail Change

Retailing is changing extremely rapidly in the emerging economies, both as a driver of social and economic change, and a consequence of economic development and the rise of consumer societies. Changes that took many decades in Europe or North America are happening at a much greater speed in emerging markets, while regulations continue to be hotly contested in these markets, raising questions about appropriate business strategies for both globalising firms and local contenders. While much has been written about retail in emerging markets, the focus has been primarily on the nature of entry strategies for Western retail companies. This book seeks to capture the impact of both internal and external regulations on retail development and strategy in emerging markets. It provides a comprehensive and up-to-date assessment of the development of retailing in a wide range of emerging economies, and seeks to capture the interplay between both retail policy and retail strategy and the theoretical implications of this on retail development as a whole. This book will be of interest to academics, researchers and advanced students with an interest in retail development in emerging markets, international business/strategy and international marketing.

Social Impact Assessment

"The pandemic has caused major shifts in consumer behaviors and retail spending. Retail & E-Commerce: Impact of the Pandemic provides an in-depth assessment of how the U.S. retail marketplace evolved since the stay-at-home phase of the pandemic in March 2020 through the initial recovery phase in Fall 2020. The assessment also points to new directions the U.S. retail sector will take going forward. Retail & E-Commerce: Impact of the Pandemic examines 10 retail segments with month-by-month sales data, foot traffic statistics, and shopping trends. Analysis of trends includes back-to-school spending, Buy Online Pickup In Store (BOPIS), delivery services, buy local initiatives, and more."--

Supply Chain Management Strategies and Risk Assessment in Retail Environments

This book focuses on the changing gender patterns of work in a global retail environment associated with the rise of contemporary retail and global sourcing. This has affected the working lives of hundreds of millions of workers in high-, middle- and low-income countries. The growth of contemporary retail has been driven by the commercialised production of many goods previously produced unpaid by women within the home. Sourcing is now largely undertaken through global value chains in low- or middle-income economies, using a 'cheap' feminised labour force to produce low-price goods. As women have been drawn into the labour force, households are increasingly dependent on the purchase of food and consumer goods, blurring the boundaries between paid and unpaid work. This book examines how gendered patterns of work have changed and explores the extent to which global retail opens up new channels to leverage more gender-equitable gains in sourcing countries.

Retail Planning Policies in Western Europe

Traditional shops are facing challenging and unprecedented times. Future-Ready Retail explains how changing consumer needs, the impact of digital and the issues around health, wellness and distancing

have transformed retail and provides compelling solutions to help reimagine the high street and out-of-town malls. Conventional high streets, shopping arcades and retail malls throughout the world no longer attract the crowds needed to sustain them as successful commercial spaces. Suffering from the effects of online shopping, changing consumer attitudes and expectations, and the legacy impact of social distancing, there's a sense of urgency and the need to address the decline in physical retail. Future-Ready Retail provides in-depth analysis of how consumers, health, data and new technologies will continue irreversibly to shake up physical shops and permanently shape the future of traditional retail. Arguing that to be future-ready, retail needs to be driven by people and places, not solely real estate, the book explains how brands can develop strategies to create shops whose main purpose is to recruit, retain and delight customers. Featuring case studies from successful global brand, retail futurist and designer Ibrahim Ibrahim identifies key retail-cultural trends, shows why it's important to make retail space physically smarter and how to use touch points such as social, website and apps alongside the physical space, to achieve a seamless, enjoyable and profitable retail experience.

The Impact of People's Growing Environmental Consciousness and Responsibility on Major Grocery Retailers in the UK

With over 25 detailed case studies of innovative and successful enterprises, this book offers a robust and practical guide to leaders tasked with understanding and delivering success in the new retail landscape.

Retail In A New World

In Retail and Social Change Steven Miles, presents a cross-disciplinary analysis of the evolution of retail and how in both its material and virtual guises it has come to reframe our relationship with the social world. Retail has become increasingly influential in homogenising the urban experience. And yet in reacting to trends in virtual consumption retailers are also becoming more and more conscious of the need to engage with consumers in more sophisticated ways. Retail and Social Change will interest students and scholars in geography, cultural studies, sociology, marketing and business studies interested in how and why retail pervades both our physical and emotional lives in increasingly unexpected ways. It will provide a lively, comparative and thought-provoking contribution that interrogates the implications of retail change, for what it means to be a citizen of a consumer society in the twenty-first century.

Policy Evaluation of the Effectiveness of PPG6

The way in which products and services are delivered to consumers, through branches and retail outlets, or more generally through a network of distribution channels, remains fundamentally important for maintaining a competitive advantage for a very wide range of businesses. This is true within domestic markets, but especially so for increasingly global corporations, as shareholder pressure for continued growth drives businesses into ever more widespread geographical markets. Arguing that more complex markets demand more sophisticated spatial analysis, this book discusses the application of location planning techniques to generate competitive advantage in a variety of business sectors in a changing retail environment. The series of techniques are analysed, from relatively straightforward branch scorecards to sophisticated applications of geographical information systems (GIS), spatial modelling and mathematical optimisation. Also explored are the changing dynamics of the impact of more restrictive planning environments in many countries on how retailers find new locations for growth and respond to changing consumer needs and wants. The book is essential reading for students and scholars alike working in geography, economics, business management, planning, finance and industry studies.
