The **iodine clock experiment**, is a fun way to investigate ...

We will show you how to carry out a green chemistry version of the iodine clock reaction. It uses less toxic, more eco-friendly chemicals than traditional versions.

Put your safety goggles and gloves on.

Add 100 mL of distilled water to each cup.

Prepare the vitamin C solution: 1. Crush the vitamin C tablet with a spoon 2. Add the crushed tablet to the water in the vitamin C solution cup.

Label the two mini cups "H₂O," and "reaction mixture".

Place the reaction mixture cup on a white sheet of paper.

1. Add 2.5 mL of vitamin C solution 2. Add 1.5 mL of iodine tincture (2%). 3. Swirl the mixture until it is colorless, 4. Add 3 mL of starch solution.

Add 8 mL of hydrogen peroxide (3%) to the H₂O₂ mini cup.

Have your stopwatch or timer ready.

Pour the hydrogen peroxide all at once from the H₂O₂ mini cup into the reaction mixture. Immediately start the stopwatch.

Keep stirring the reaction mixture. Stop the stopwatch as soon as you see the solution turning blue.

How long did it take until the color change happened?

The time from when the reactants are combined until the color change happens is a measure of the iodine clock's reaction rate.

Repeat the reaction with different hydrogen peroxide concentrations

Does the reaction rate increase or decrease with decreasing hydrogen peroxide concentrations?

Challenge Can you find conditions that create a color change at exactly 20, 40, or 60 seconds?
