## Easy Language – Plain Language – Easy Language Plus

This book shows how accessible communication, and especially easy-to-understand languages, should be designed in order to become instruments of inclusion. It examines two well-established easy-to-understand varieties: Easy Language and Plain Language, and shows that they have complementary profiles with respect to four central qualities: comprehensibility, perceptibility, acceptability and stigmatisation potential. The book introduces Easy and Plain Language and provides an outline of their linguistic, sociological and legal profiles: What is the current legal framework of Easy and Plain

Language? What do the texts look like? Who are the users? Which other groups are involved in the production and use of Easy and Plain Language offers? Which qualities are a hazard to acceptability and, thus, enhance their stigmatisation potential? The book also proposes another easy-to-understand variety: Easy Language Plus. This variety balances the four qualities and is modelled in the present book.

Neuropsychotherapy is intended to inspire further development and continual empirical updating of consistency theory. It is essential for psychotherapists, psychotherapy researchers, clinical psychologists, psychiatrists, neuroscientists, and mental-health professionals. Profoundly important and innovative, this volume provides necessary know-how for professionals as it connects the findings of modern neuroscience to the insights of psychotherapy. Throughout the book, a new picture unfolds of the empirical grounds of effective psychotherapeutic work. Author Klaus Grawe articulates a comprehensive model of psychological functioning-consistency theory-and bridges the gap between the neurosciences and the understanding of psychological disorders and their treatment. Neuropsychotherapy illustrates that psychotherapy can be even more effective when it is grounded in a neuroscientific approach. Cutting across disciplines that are characteristically disparate, the book identifies the neural foundations of various disorders, suggests specific psychotherapeutic conclusions, and makes neuroscientific knowledge more accessible to psychotherapists. The book's discussion of consistency theory reveals the model is firmly connected to other psychological theoretical approaches, from control theory to cognitive-behavioral models to basic need theories.

This book studies the relationship between institutionalism and schizophrenia in the lives of mental patients. The authors observed schizophrenic patients in three different mental hospitals over a period of eight years. Their conclusions are important for the better management of institutions and for the future of extra-mural mental health services. The lives of long-term schizophrenic patients are strictly limited by their institutionalised environments, which often produce negative effects. For example, patients are especially vulnerable to social understimulation, reacting with apathy and withdrawal. On the positive side, symptoms such as delusions and hallucinations may actually decrease during institutionalisation. The interesting approach to the positive and negative effects of institutionalisation on schizophrenics will give this book a wide readership in psychiatry, social psychology and the social sciences as well as among social workers, nurses and occupational therapists.

During the International Congress for Hypnosis and Psychosomatic Medicine, held in Paris from April 28th to 30th 1965 under the patronage of the World Federation for Mental Health, about one hundred papers were presented and the following panel discussions held: Electroencephalography and Hypnosis, chairman Prof. H. FISCHGOLD (Paris); The Teaching of Hypnosis, chairmen Dr. C. CEDERCREUTZ (Hamina) and Dr. H. ROSEN (Baltimore); Hypnosis and Pain, chairman Dr. M.H. ERICKSON (Phoenix); Hypnosis and the Psychotropic Drugs, chairman Dr. B.B. RAGINSKY (Montreal). The official languages of the Congress (German, French and English) were not always the speakers' mother tongues. A certain amount of editing was therefore necessary before publication, and this retarded the printing. Approximately half of the papers appear in this volume. We wish to thank the following organizations for the help they granted the Congress. Prof. J. Challenging the Stigma of Mental Illness offers practical strategies for addressing the harmful effects of stigma attached to mental illness. It considers both major forms of stigma: public stigma, which is prejudice and discrimination endorsed by the general population; and self-stigma, the loss of self-esteem

Cultural Sociology of Mental Illness: An A to Z Guide looks at recent reports that suggest an astonishing rise in mental illness and considers such questions as: Are there truly more mentally ill people now or are there just more people being diagnosed and treated? What are the roles of economics and the pharmacological industry in this controversy? At the core of what is going on with mental illness in America and around the world, the editors suggest, is cultural sociology: How differing cultures treat mental illness and, in turn, how mental health patients are affected by the culture. In this illuminating multidisciplinary reference, expert scholars explore the culture of mental illness from the non-clinical perspectives of sociology, history, psychology, epidemiology, economics, public health policy, and finally, the mental health patients themselves. Key themes include Cultural Comparisons of Mental Health Disorders; Cultural Sociology of Mental Illness Around the World; Economics; Epidemiology; Mental Health Practitioners; Non-Drug Treatments; Patient, the Psychiatry, and Psychology; Psychiatry and Space; Psychopharmacology; Public Policy; Social History; and Sociology. Key Features This two-volume A-Z work, available in both print and electronic formats, includes close to 400 articles by renowned experts in their respective fields. An Introduction, a thematic Reader's Guide, a Glossary, and a Resource Guide to Key Books, Journals, and Associations and their web sites enhance this invaluable reference. A chronology places the cultural sociology of mental illness in historical context. 150 photos bring concepts to life. The range and scope of this Encyclopedia is vivid testimony to the intellectual vitality of the field and will make a useful contribution to the next generation of sociological research on the cultural sociology of mental illness.

#### Strategy for lifelong learning in the Federal Republic of Germany

This book introduces the novice reader to modern social theory through the creative exploration of eight major metaphors that have shaped Western understandings of human society. Rigney vividly yet concisely examines each major theoretical perspective in sociology, including functionalism, conflict theory, rational choice, and symbolic interactionism. He shows how each of these theories is rooted in a particular metaphorical tradition. Over decades and centuries, Rigney argues, social theorists have variously likened societies to organisms and living systems, to machines, battlefields, legal systems, marketplaces, games, theatrical productions, and discourses. Most interestingly, Rigney deftly shows how nearly all Western social theories fit with one or more of the metaphors. He emphasizes a humanistic understanding of society with an emphasis on the creative agency of social actors and communities. The book offers students a rich understanding of social theory, yet it is simultaneously concise and

broad ranging, allowing instructors to further pursue detailed exploration of any perspectives they choose.

### Neuropsychotherapy

Dr. McGraw spent a lifetime in the identification and study of human growth and development and in so doing laid the foundation of our understanding of early human behavior. This book, first published in 1945, was her outstanding contribution to our knowledge of development. This edition faithfully reproduces the original text and its value is enhanced by the addition of Dr. McGraw's own assessment of her work, written some three years before her death at the age of 89.

### Institutionalism and Schizophrenia

Attractively illustrated with over a hundred halftones and drawings, this volume presents a series of vibrant profiles that trace the evolution of our knowledge about the brain. Beginning almost 5000 years ago, with the ancient Egyptian study of "the marrow of the skull," Stanley Finger takes us on a fascinating journey from the classical world of Hippocrates, to the time of Descartes and the era of Broca and Ramon y Cajal, to modern researchers such as Sperry. Here is a truly remarkable cast of characters. We meet Galen, a man of titanic ego and abrasive disposition, whose teachings dominated medicine for a thousand years; Vesalius, a contemporary of Copernicus, who pushed our understanding of human anatomy to new heights; Otto Loewi, pioneer in neurotransmitters, who gave the Nazis his Nobel prize money and fled Austria for England; and Rita Levi-Montalcini, discoverer of nerve growth factor, who in war-torn Italy was forced to do her research in her bedroom. For each individual, Finger examines the philosophy, the tools, the books, and the ideas that brought new insights. Finger also looks at broader topics--how dependent are researchers on the work of others? What makes the time ripe for discovery? And what role does chance or serendipity play? And he includes many fascinating background figures as well, from Leonardo da Vinci and Emanuel Swedenborg to Karl August Weinhold--who claimed to have reanimated a dead cat by filling its skull with silver and zinc--and Mary Shelley, whose Frankenstein was inspired by such experiments. Wide ranging in scope, imbued with an infectious spirit of adventure, here are vivid portraits of giants in the field of neuroscience--remarkable individuals who found new ways to think about the machinery of the mind.

### Challenging the Stigma of Mental Illness

This second edition provides a review of the current flow research. The first, thoroughly revised and extended, part of the book, addresses basic concepts, correlates, conditions and consequences of flow experience. This includes the developments of the flow model, methods to measure flow, its physiological correlates, personality factors involved in the emergence of flow, social flow, the relationship of flow with performance and wellbeing, but also possible negative consequences of flow. The second, completely new, part of the book addresses flow in diverse contexts, in particular, work, development, sports, music and arts, and human computer interaction. As such, the book provides a broad overview on the current state of flow research – from the basics to specific contexts of application. It presents what has been learned since the beginning of flow research, what is still open, and how the mission to understand and foster flow should continue. The book addresses researchers and students who are interested in flow, as well as practitioners who seek for sound research on flow in their field of expertise.

### Paracelsus

In the twentieth century paradigms of linguistics have largely left language change to one side. Rudi Keller's book is an exciting contribution to linguistic philosophy because it puts language change back on the linguistics agenda and demonstrates that, far from being a remote mystery, it can and should be explained.

## Cultural Sociology of Mental Illness

There is a remarkable paucity of pictorial material to draw on when discussing human rights and the way they are respected or infringed, yet we are deluged everyday in every medium with images that openly show violence. The result is a surfeit of cynicism. The Face of Human Rights presents no such exotic cruelty; rather, the photographs it gathers together capture injustice and evoke real feelings, inviting the reader to participate in an emotionally and intellectually sincere manner. Images of normality in a peaceful world complete the picture and, though they risk losing the reader too tuned into spectacle, they are worth the risk. The Face of Human Rights takes a novel approach to a critical topic, interspersing a visual interpretation of individual legal aspects with textual collages from historical and current human rights discussions. It offers facts and figures, and acknowledges the efforts governmental and non-governmental organizations are making to defend human rights and stamp out their infringement. This publication is intended to help an international public to understand the complex demands, connections, and obstacles involved in a just and fair life together for all human beings. 300,000 children under the age of 18 serve in government forces or armed rebel groups / there is no country in the world where women's wages are equal to those of men / the U.S. government confirms that over 200 inmates have been wrongly convicted since 1973 / average life expectancy in the world is now 66 years, 20 years more than in 1960 / 1.3 billion people still lack access to safe water and 2.3 billion to sanitation / the adult literacy rate worldwide has increased by more than one-third since 1970, but 70% of illiterates are women / over a quarter of the worlds people do not get enough food / approximately one in every five black Americans is jailed at some time during their life. 500 illustrations

## The Neuromuscular Maturation of the Human Infant

This title provides a thorough theoretical and practical introduction to the application of neural networks to pattern recognition and intelligent signal processing. It has been tested on students, unfamiliar with neural networks, who were able to pick up enough details to successfully complete their masters or final year undergraduate projects. The text also presents a comprehensive treatment of a class of neural networks called common bandwidth spherical basis function NNs, including the probabilistic NN, the modified probabilistic NN, and the general regression NN.

## Pathologiae cerebri et nervosi generis specimen. In quo agitur de morbis convulsivis et de scorbuto

With over 350 illustrations, this impressive volume traces the rich history of ideas about the functioning of the brain from its roots in the ancient cultures of Egypt, Greece, and Rome through the centuries into relatively modern times. In contrast to biographically oriented accounts, this book is unique in its emphasis on the functions of the brain and how they came to be associated with specific brain regions and systems. Among the topics explored are vision, hearing, pain, motor control, sleep, memory, speech, and various other facets of intellect. The emphasis throughout is on presenting material in a very readable way, while describing with scholarly acumen the historical evolution of the field in all its amazing wealth and detail. From the opening introductory chapters to the concluding look at treatments and therapies, this monumental work will captivate readers from cover to cover. It will be valued as both an historical reference and as an exciting tale of scientific discovery. It is bound to attract a wide readership among students and professionals in the neural sciences as well as general readers interested in the history of science and medicine.

#### Madness: A Very Short Introduction

This collection contains twenty-one thought-provoking essays on the controversies surrounding the moral and legal distinctions between euthanasia and "letting die." Since public awareness of this issue has increased this second edition includes nine entirely new essays which bring the treatment of the subject up-to-date. The urgency of this issue can be gauged in recent developments such as the legalization of physician-assisted suicide in the Netherlands, "how-to" manuals topping the bestseller charts in the United States, and the many headlines devoted to Dr. Jack Kevorkian, who has assisted dozens of patients to die. The essays address the range of questions involved in this issue pertaining especially to the fields of medical ethics, public policymaking, and social philosophy. The discussions consider the decisions facing medical and public policymakers, how those decisions will affect the elderly and terminally ill, and the medical and legal ramifications for patients in a permanently vegetative state, as well as issues of parent/infant rights. The book is divided into two sections. The first, "Euthanasia and the Termination of Life-Prolonging Treatment" includes an examination of the 1976 Karen Quinlan Supreme Court decision and selections from the 1990 Supreme Court decision in the case of Nancy Cruzan. Featured are articles by law professor George Fletcher and philosophers Michael Tooley, James Rachels, and Bonnie Steinbock, with new articles by Rachels, and Thomas Sullivan. The second section, "Philosophical Considerations," probes more deeply into the theoretical issues raised by the killing/letting die controversy, illustrating exceptionally well the dispute between two rival theories of ethics, consequentialism and deontology. It also includes a corpus of the standard thought on the debate by Jonathan Bennet, Daniel Dinello, Jeffrie Murphy, John Harris, Philipa Foot, Richard Trammell, and N. Ann Davis, and adds articles new to this edition by Bennett, Foot, Warren Quinn, Jeff McMahan, and Judith Lichtenberg.

#### Advances in Flow Research

With 16 pages of photographs One of the most shocking aspects of the Nazi treatment of their prisoners was the wanton cruelty of the doctors assigned to the concentration camps that were dotted throughout occupied Europe. In an ironic perversion of their Hippocratic oath doctors, such as the infamous Mengele, carried out horrendous experiments on their captive victims in the name of science. As part of the Nuremberg trials the Nazi medical establishment was called to account for these crimes against humanity. Alexander Mitscherlich was the doctor assigned to carry out a full investigation into the crimes across all of Europe; in his report embodied in this book, reported on the awful scale and complicity of the Nazis. The terrible details have to be read to be believed in this shocking book.

Beatrice Forbes Manz uses the history of Iran under the Timurid ruler Shahrukh (1409–1447) to analyse the relationship between government and society in the medieval Middle East. She provides a rich portrait of Iranian society over an exceptionally broad spectrum - the dynasty and its servitors, city

elite and provincial rulers, and the religious classes, both ulama' and Sufi. The work addresses two issues central to pre-modern Middle Eastern history: how a government without the monopoly of force controlled a heterogeneous society, and how a society with diffuse power structures remained stable over long periods. Written for an audience of students as well as scholars, this book provides a broad analysis of political dynamics in late medieval Iran and challenges much received wisdom about civil and military power, the relationship of government to society, and the interaction of religious figures with the ruling class.

#### Das Bild der Menschenrechte

Between August 1918 and March 1919 the Spanish influenza spread worldwide, claiming over 25 million lives - more people than perished in the fighting of the First World War. It proved fatal to at least a half-million Americans. Yet, the Spanish flu pandemic is largely forgotten today. In this vivid narrative, Alfred W. Crosby recounts the course of the pandemic during the panic-stricken months of 1918 and 1919, measures its impact on American society, and probes the curious loss of national memory of this cataclysmic event. This 2003 edition includes a preface discussing the then recent outbreaks of diseases, including the Asian flu and the SARS epidemic.
