Star Maps

Until the publication of the first edition of 'Star Maps,' books were either general histories of astronomy using examples of antiquarian celestial maps as illustrations, or catalogs of celestial atlases that failed to trace the flow of sky map development over time. The second edition focuses on the development of contemporary views of the heavens and advances in map-making. It captures the beauty and awe of the heavens through images from antiquarian celestial prints and star atlases. This book uniquely

combines a number of features: 1) the history of celestial cartography is traced from ancient to modern times; 2) this development is integrated with contemporary cosmological systems; 3) the artistry of sky maps is shown using beautiful color images from actual celestial atlases and prints; 4) each illustration is accompanied by a legend explaining what is being shown; and 5) the text is written for the lay reader based on the author's experience with writing articles for amateur astronomy and map collector magazines. This updated second edition of 'Star Maps' contains over 50 new pages of text and 44 new images (16 in color), including completely new sections on celestial frontispieces, deep-sky objects, playing card maps, additional cartographers, and modern computerized star maps. There is also expanded material about celestial globes, volvelles, telescopes, and planets and asteroids.

Celestial Charts

After the enormous international success of *The Phantom Atlas* and *The Golden Atlas*, Edward Brooke-Hitching's stunning new book unveils some of the most beautiful maps and charts ever created during mankind's quest to map the skies above us. This richly illustrated treasury showcases the finest examples of celestial cartography - a glorious genre of map-making often overlooked by modern map books - as well as medieval manuscripts, masterpiece paintings, ancient star catalogues, antique instruments and other appealing curiosities. This is the sky as it has never been presented before: the realm of stars and planets, but also of gods, devils, weather wizards, flying sailors, medieval aliens, mythological animals and rampaging spirits. The reader is taken on a tour of star-obsessed cultures around the world, learning about Tibetan sky burials, star-covered Inuit dancing coats, Mongolian astral prophets and Sir William Herschel's 1781 discovery of Uranus, the first planet to be found since antiquity. Even stranger are the forgotten stories from European history, like the English belief of the Middle Ages in ships that sailed a sea above the clouds, 16th-century German UFO sightings and the Edwardian aristocrat who mistakenly mapped alien-made canals on the surface of Mars. As the intricacies of our universe are today being revealed with unprecedented clarity, there has never been a better time for a highly readable book as beautiful as the night sky to contextualise the scale of these achievements for the general reader.

Astronomical Atlases, Maps & Charts

The beauty and awe generated by the celestial void captures our imagination and delights our aesthetic sense. Antiquarian map societies are prospering, and celestial maps are now viewed as a specialty of map collecting. This book traces the history of celestial cartography and relates this history to the changing ideas of man's place in the universe and to advances in map-making. Photographs from actual antiquarian celestial atlases and prints, many previously unpublished, enrich the text. The book describes the development and relationships between different sky maps and atlases as well as demonstrating contemporary cosmological ideas, constellation representations, and cartographic advances.

The Sky Atlas

The author's maps, which divide the sky into quadrants, and explanations of the constellations are designed to simplify study for the amateur astronomer.

Star Maps

In recent years, there has been increased interest in our Solar System. This has been prompted by the launching of giant orbiting telescopes and space probes, the discovery of new planetary moons and heavenly bodies that orbit the Sun, and the demotion of Pluto as a planet. In one generation, our place in the heavens has been challenged, but this is not unusual. Throughout history, there have been a number of such world views. Initially, Earth was seen as the center of the universe and surrounded by orbiting planets and stars. Then the Sun became the center of the cosmos. Finally, there was no center, just a vast array of galaxies with individual stars, some with their own retinue of planets. This allowed our Solar System to be differentiated from deep-sky objects, but it didn't lose its mystery as more and more remarkable bodies were discovered within its boundaries. This book tells the exciting story of how we have conceptualized and mapped our Solar System from antiquity to modern times. In addition to the complete text, this story is made more vivid by: • 162 Solar System and planetary maps, diagrams, and images (over a third in color); • direct quotes and figures from antiquarian, contemporary, and Space Age documents and photographs that allow the reader to track how humans have viewed the Solar System from original sources; • nine tables that compare the various world views, relative

planetary positions, and components of the Solar System with each other. Broad in scope and rich in imagery, this book will draw the reader into the story of our Solar System and how it has been mapped since the beginning of recorded time.

Star Maps for Beginners

Featuring a Preface by the translator, this new edition is a historically significant work on modern map projections and their mathematical underpinnings. Includes an expanded reference section as well as a new biographical sketch of J.H. Lambert.

Solar System Maps

In this volume all extant celestial maps and globes made before 1500 are described and analysed. It also discusses the astronomical sources involved in making these artefacts in antiquity, the Middle Ages, the Islamic world and the European Renaissance before 1500.

Notes and Comments on the Composition of Terrestrial and Celestial Maps

Throughout history, people have sought ways in which to "map" the heavens. These efforts have often resulted in very beautiful documents. The Mapping of the Heavens reproduces over eighty such documents in full color to reveal some of the ways in which the underlying structure of the universe has been conceived and explained. With examples ranging from the Stone Age to the Space Age, it offers a challenging and entertaining exploration of the tension between the rigors of science and the continuing search for cause, certainty, and harmony in the universe.

Illustrating the Phaenomena

Three-dimensional glasses packed inside each copy of this phenomenal new book offer an in-depth view of the universe as never before presented. 20 full-color photos and drawings; 27 3-D maps; 27 black-and-white maps. Includes 2 sets of 3-D glasses.

The Mapping of the Heavens

Featuring splendid illustrations of the most famous, rare, and impressive star atlases created from the sixteenth to the nineteenth centuries, this gorgeous book takes a journey through the constellations. Find out about the work of history's great astronomers, their sometimes-fantastic interpretations of extraterrestrial phenomena, and how our knowledge of the universe evolved. Merging art and scientific knowledge, Celestial Atlas offers a fascinating glimpse into the past.

Celestial Maps and Globes and Star Catalogues of the Sixteenth and Early Seventeenth Centuries

This guide charts the positions of over 1,000 stars and celestial objects, arrayed in easy-to-read maps. It includes a detailed introduction to stargazing, with explanations of the celestial sphere, coordinates, time, star names and other basic concepts. The author catalogs a list of eclipses of the sun and moon through the year 2012, and also supplies a complete list of constellation names and symbols. Fourteen color maps show both polar and equatorial projections of the sky. With additional data on the location of variable stars, the brightest stars, and clusters, this book is worth taking on your next nighttime sojourn across the sky.

3-D Star Maps

The first star guide of its kind in the southern hemisphere, this book features 96 star maps for observing the southern skies with the naked eye, standard binoculars or a small telescope. Divided into 12 sets, the maps cover all eight principal views of the sky (N, NE, E, SE, S, SW, W and NW) for each month of the year and for different times during each night. For each set of star maps, the reader is alerted to prominent stars and constellations visible during that period of viewing. Terms and concepts are explained and frequently asked questions addressed. Star Maps for Southern Africa provides thorough and extensive coverage of our night skies, enabling readers to track stars and related spectacles throughout the year. It will remain relevant for a lifetime.

Celestial Charts

Explains the myths and legends behind the most popular constellations, providing color maps of each and a guide to locating them in the heavens.

An Explanation of the Gnomonic Projection of the Sphere; and of Such Points of Astronomy as are Most Necessary in the Use of Astronomical Maps

Philip's Pocket Star Atlas is a highly practical atlas in a compact format for use out of doors. It contains a series of detailed maps showing the entire night sky, as well as a wealth of useful astronomical data. It is suitable for use anywhere in the world. This popular star atlas is now in its fifth edition, for which it has been fully revised and updated. It presents the sky in a series of 18 maps, showing stars down to magnitude 5.1. This includes all stars visible to the naked eye in semi-rural conditions. Accompanying the star maps is a brief round-up of the basics of astronomy, including celestial coordinates, the ecliptic, magnitudes, spectral types, constellation and star names, the Solar System, the movements of the Sun and the Moon, eclipses and deep-sky objects. Clear and colourful diagrams help to explain these sometimes complicated concepts for the less-experienced observer. In addition, Philip's Pocket Star Atlas includes a series of tables packed with useful practical information, such as the position and brightness of the deep-sky objects marked on the maps, dates of forthcoming solar and lunar eclipses, dates for when best to observe Mercury, Venus, Mars, Jupiter and Saturn, plus the dates of the major meteor showers.

Celestial Atlas

This is a practical atlas for observers using binoculars or a small telescope. It contains all the maps you need to learn your way around the night sky, whether you want to find remote galaxies, sketch lunar craters or make estimates of variable stars

The Globe of Martin Bylica of Olkusz and Celestial Maps in the East and in the West

The Philip's Star Chart - maps of the night sky which bring astronomy to life

Cambridge Pocket Star Atlas

A practical guide to binocular and small telescope observing. Night Sky Atlas combines clear, accurate star maps with reliable and informative text. This is a highly practical atlas for beginning sky gazers using binoculars or a small telescope. Sturdy binding makes it suitable for outdoor use. Cover flaps can be used as page-markers. The sewn binding allows the atlas to be opened flat. The star maps are drawn with black stars on a white background, allowing observers to pencil in their own observations. The high quality paper can withstand repeated use of an eraser. The book begins by presenting the whole sky in a series of six maps, showing stars down to magnitude 5.5 -- all visible with binoculars or a small telescope. Opposite each map is a photo-realistic image that shows how the same portion of sky looks to the naked eye, allowing less-experienced observers to quickly find specific objects of interest. The maps can be used for planning observations, navigating from one part of the sky to another and for a quick reference guide. Other features include: Forty large scale constellation charts A full set of seasonal charts Maps of the Moon and the planets Deep sky maps identifying double stars, nebula and more. A comprehensive index provides the location of information for all the night sky objects and features covered in the atlas. The Night Sky Atlas is the ideal portable reference for backyard astronomers.

Star Maps for Southern Africa

Although seeing is believing, sometimes what you feel is more important. Carl Thornton, seventeen-year-old stargazer and total nerd, resides in Reno, Nevada, and lives for watching the night sky. His dream—discover a UFO. His mantra—“Seeing is believing.” He meets Grace Paxton, and finds out through a series of circumstances, that she, her family and friends, aren’t exactly from around here. As well, he learns the reason why Area 51 exists, the secrets it holds, and the danger in finding out those secrets. Carl also falls for Grace, but realizes that he has to find a way to get her and her people home—even if it costs him his life.

Star Maps

From prehistoric times, mankind has looked up at the night sky, and puzzled at the changing positions of the stars. How far away they are is a question that has confounded scientists for centuries. Over the

last few hundred years, many scientific careers – and considerable resources – have been devoted to measuring their positions and motions with ever increasing accuracy. And in the last two decades of the 20th century, the European Space Agency developed and launched the Hipparcos satellite, around which this account revolves, to carry out these exacting measurements from space. What has prompted these remarkable developments? Why have governments been persuaded to fund them? What are scientists learning from astronomy's equivalent of the Human Genome Project? This book traces the subject's history, explains why such enormous efforts are considered worthwhile, and interweaves these with a first-hand insight into the Hipparcos project, and how big science is conducted at an international level. The involvement of amateur astronomers, and the Hipparcos contributions to climate research, 'death stars' passing close to the Sun, and the search for extra-solar planets and even intelligent life itself, are some of the surprising facets of this unusual space mission.

Philip's Pocket Star Atlas

The stars have never seemed closer than they do with the Astronomy Pack. Suitable for use in the Northern Hemisphere, the pack contains four essential items to introduce the beginner to the fascinating hobby of astronomy: a 'glow-in-the-dark' planisphere, an 80-page paperback book about the stars and planets, a colorful moon map, and newly updated star chart. **Glow-in-the-Dark Planisphere:** This planisphere has been specially made so that, after being held under a bright light, the stars and the names and shapes of the constellations will glow in the dark for a period. It is both a fun and practical star finder for identifying the stars and constellations visible on any night of the year from the US and Southern Canada (42 degrees North); the star map is drawn by the well-known celestial cartographer Wil Tirion. A sheet explaining how to use the planisphere is included in the pack. **Exploring Stars and Planets:** A colorful and entertaining introduction to the exciting world of astronomy, this 80-page paperback is illustrated with more than 200 color photographs, artworks and maps, as the author Ian Ridpath describes the latest developments in the fast-moving fields of space exploration and astronomy. Concise chapters introduce the Sun, the Earth and all the other planets in our Solar System. Then, moving further into space, the author examines the stars and galaxies, and explores the origin of the Universe. **Star Chart:** This Star Chart shows the stars and constellations of the night sky in three superb maps: the northern and southern hemispheres, and the equatorial region. All stars visible with the naked eye are shown, with the brightest stars shown in their true colours. Fainter star clusters and nebulae are marked for observers using binoculars or small telescopes. Constellations, double stars and variable stars are also listed, and an informative accompanying text explains how to use the charts throughout the year, at any latitude. In a convenient folded format, Star Chart is suitable for use in both northern and southern latitudes. **Moon Map:** In a convenient folded format, the Moon Map is a superbly detailed, large-format map of the near (visible) side of the Moon. Specially drawn for by Dr John Murray, an expert on the lunar surface, the map is not only a highly accurate and clear representation of the Moon but is also a practical guide for lunar observers. More than 500 physical features - craters, seas, mountain ranges, peaks, valleys and rilles (elongated depressions) - are named and indexed, and the landing sites of unmanned and manned spacecraft are also marked. The observer can thus readily identify objects seen through binoculars or a telescope, or pick targets for a program of observation. The accompanying text is a practical guide to Moonwatching, which explains how to use the map and highlights the most interesting lunar features. Close-up images of some of these objects show what the observer can expect to see. Also included are photographs of the Moon at each daily stage and a smaller map of the far side, as revealed by satellites. Guidelines on drawing or photographing the Moon are also included.

Philip's Night Sky Atlas

Published in 1905, this highly illustrated work by Sir Robert Stawell Ball (1840-1913) is a concise introduction to astronomy.

Familiar Astronomy, Or, An Introduction to the Study of the Heavens

The Ever-Changing Sky provides a comprehensive and non-mathematical guide to spherical astronomy. The reader is guided through terrestrial and celestial co-ordinate systems, time measurement and celestial navigation, to the prediction of the rising and setting of the stars, Sun and Moon. It focuses on the geometrical aspects of the night sky without using complex trigonometry. The book progresses to a general study of the Earth and sky, including the stars and constellations (with useful star maps provided), the motions and appearance of the Moon, tides and eclipses, the orbits of the planets and

the smaller bodies of the Solar System (asteroids, meteors, meteorites and comets). Finally, there is a brief overview of atmospheric phenomena (including rainbows and haloes). This text will be invaluable to students taking courses in naked-eye astronomy, amateur and professional astronomers, as well as more general readers wanting to know how the night sky changes.

Astronomical Maps

Philip's Month-by-Month Star Finder is a concise calendar for star watchers in the northern hemisphere. Star charts show the position of stars, constellations and other celestial objects for each month of the year, in both northerly and southerly directions. The introduction explains the basic facts that observers need to know: the apparent motions of the stars, seasonal changes, star brightnesses, the nature of the Milky Way, and how the night sky is represented on maps. In addition, location tables are provided for the four planets bright enough to be seen easily from the Earth with the naked eye: Venus, Mars, Jupiter and Saturn. The principal lunar features are also indicated on a pair of photographs showing the Moon at first quarter and at last quarter.

Star Maps for Beginners

About a millennium ago, in Cairo, an unknown author completed a large and richly illustrated book. In the course of thirty-five chapters, this book guided the reader on a journey from the outermost cosmos and planets to Earth and its lands, islands, features, and inhabitants. This treatise, known as *The Book of Curiosities*, was unknown to modern scholars until a remarkable manuscript copy surfaced in 2000. *Lost Maps of the Caliphs* provides the first general overview of *The Book of Curiosities* and the unique insight it offers into medieval Islamic thought. Opening with an account of the remarkable discovery of the manuscript and its purchase by the Bodleian Library, the authors use *The Book of Curiosities* to re-evaluate the development of astrology, geography, and cartography in the first four centuries of Islam. Their account assesses the transmission of Late Antique geography to the Islamic world, unearths the logic behind abstract maritime diagrams, and considers the palaces and walls that dominate medieval Islamic plans of towns and ports. Early astronomical maps and drawings demonstrate the medieval understanding of the structure of the cosmos and illustrate the pervasive assumption that almost any visible celestial event had an effect upon life on Earth. *Lost Maps of the Caliphs* also reconsiders the history of global communication networks at the turn of the previous millennium. It shows the Fatimid Empire, and its capital Cairo, as a global maritime power, with tentacles spanning from the eastern Mediterranean to the Indus Valley and the East African coast. As *Lost Maps of the Caliphs* makes clear, not only is *The Book of Curiosities* one of the greatest achievements of medieval mapmaking, it is also a remarkable contribution to the story of Islamic civilization that opens an unexpected window to the medieval Islamic view of the world.

Occupy

The term Occupy represents a belief in the transformation of the capitalist system through a new heterogenic world of protest and activism that cannot be conceived in terms of liberal democracy, parliamentary systems, class war or vanguard politics. These conceptualisations do not articulate where power is held, nor from where transformation may issue. This collection of essays by world-leading scholars of Deleuze and Guattari examines how capitalism can be understood as a global abstract machine whose effects pervade all of life and how Occupy can be framed as a response to this as a heterogenic movement based on new tactics, revitalised democratic processes and nomadic systems of organisation. Seeing the question as a political tactic aimed at delegitimizing their protest, Occupiers refused to answer the question 'what do you want?', produce manifestos, elect leaders or act as a vanguard. *Occupy: A People Yet to Come* goes some considerable way towards providing the terms upon which this refusal can be understood within a changed landscape of political activism

and the rewriting of the conventions of political protest. With essays by Claire Colebrook, Giuseppina Mecchia, John Protevi, Rodrigo Nunes, Verena Andermatt Conley, Nicholas Thoburn, Ian Buchanan, David Burrows, Eugene Holland and Andrew Conio, the volume examines the economic predicates of capitalist economics: liberal democracy and its alternatives, the conjugation of protest and aesthetics, how occupy experiments with different types of leadership and how power, hierarchies and resistance might be understood using Deleuze and Guattari's radical conceptualizations of debt; subjectivity, the minor and the molecular, occupation, dispersed leadership, territory, smooth space and the war machine.

The Magna Carta Manifesto

History.

Illuminatus!

What if you discovered that you come from an ancient family of Shadow Chasers, with a duty to protect others from an evil Army of Shadows. Nom is an outsider at school. When she and Zithembe become friends, life still seems - well - a little ordinary. But when an army of monsters threatens their world, it's all up to the two of them and the start of a journey into the dreamworld on a quest that will change their lives. Powers of the Knife is the first book in the Shadow Chasers trilogy. It's an African fantasy adventure, one part family saga, one part hero's quest.

The Powers of the Knife

Only the Shadow Chasers, with their magical knives, can save the world from the evil that lives in the dreamworld. The powerful Oyo has a Shadow Chasers knife ... and only the cleverest and bravest can withstand the Flame of Truth to win it back from her. With the guidance of Zulaika, a helpful ghost, Nom, Zithembe and Rosy travel through the unknown terrors of the dreamworld to find Oyo and regain the knife.

Flame of Truth

'A practical map for a flourishing life' (Daniel Goleman, author of Emotional Intelligence) In this ground-breaking, heart-lifting and deeply useful book, Martin Seligman, internationally esteemed psychologist and the father of Positive Psychology, shows us that happiness can be learned and cultivated. Using many years of in-depth psychological research he lays out the 24 strengths and virtues unique to the human psyche and teaches you how to identify the ones you possess. By calling upon your signature strengths, you will not only develop natural buffers against misfortune and negative emotion, but also improve the world around you - at work, in love and in raising children - achieving new and sustainable contentment, joy and meaning.

Following his two classics, *Ask the Fellows Who Cut the Hay* and *The Horse in the Furrow*, renowned oral historian George Ewart Evans continues his study of the vanishing customs, working habits and rich language of the farming communities of East Anglia with *The Pattern Under the Plough* (Faber, 1966). Although based on East Anglia, this book was and remains of wider interest, for - as the author pointed out at the time - similar changes were occurring in North America, and also happening with remarkable speed in Africa. In chronicling the old culture George Ewart Evans has taken its two chief aspects, the home and the farm. He describes the house with its fascinating constructional details, the magic invoked for its protection, the mystique of the hearth, the link of the bees with the people of the house, and some of their fears and pre-occupations. Among the chapters on the farm is one of Evans's most original pieces of research: the description of the secret horse societies. Beautifully illustrated by David Gentleman, this book is important not only for the material it reveals about the past but for the implications for present-day society. 'As real (and as valuable) as the evidence unearthed by the spadework of archaeology.' *Observer*

Authentic Happiness

Yet another novel about comedy, fame and madness. But with answers to the meaning of life thrown in for free. John Smith just died as a comedian but may have been reborn as a prophet of the present moment. Dr Hazel Cole has written a self-help book so good that it might even work on daytime

TV presenters. Behind the scenes, billionaire press baron Eric Hayle seems to be pressing all the buttons. But will this mysterious man spoil everything? God only knows. And what happens if you ask 644 professional philosophers about the meaning of life, the universe and everything? Caspar knows because he tried it. The results are included in this edition at no extra cost to you. But knowledge comes at a price. You will have to put up with some of Caspar's ranting at the universe.

The computer unlike other inventions is universal; you can use a computer for many tasks: writing, composing music, designing buildings, creating movies, inhabiting virtual worlds, communicating... This popular science history isn't just about technology but introduces the pioneers: Babbage, Turing, Apple's Wozniak and Jobs, Bill Gates, Tim Berners-Lee, Mark Zuckerberg. This story is about people and the changes computers have caused. In the future ubiquitous computing, AI, quantum and molecular computing could even make us immortal. The computer has been a radical invention. In less than a single human life computers are transforming economies and societies like no human invention before.

The Guru Guide to Entrepreneurship

It provides comprehensive coverage of developments in formal and informal education in Hong Kong from the end of 1941 to the beginning of the new millennium. As was true of its predecessor, each Part of this book is subdivided into three sections: Commentary, Chronicle, and Evidence. Such an organization facilitates flexible reading. Readers primarily interested in analysis, interpretation, and the identification of themes are likely to focus initially on the Commentary sections and to move, as they feel stimulated, to the relevant entries in the Chronicle and/or items of Evidence. Readers who seek either more encyclopedic understanding or detailed answers to specific questions may well wish to focus primarily or at least initially on the Chronicle sections, and then to search for substantiation in the Evidence section or for amplification in the author's Commentary. At times, some readers may wish to browse through the Evidence sections, reaching possibly serendipitous discoveries. Academic and general readers are likely to be particularly interested in Part I of the book, which deals with education in Hong Kong during the Japanese occupation, a topic that has received only very rare and generalization-bound treatment in other publications. The author offers insights into all levels of education. His conceptual scope incorporates many types of education - including the mainstream academic education, technical education, teacher education, special education, physical education, civic education, education that focuses on morals, that which focuses on culture, and the various sorts of non-formal and informal education.

The Universal Machine

Did you know that the leading killer in America, cardiovascular disease, is directly linked to meat consumption? Or that you save more water by not eating one pound of beef than you would by not showering for a whole year? *Diet for a New America* simply and eloquently documents these ecological concerns and more, as well as the little-known horrors that animals experience during factory farming. Few of us are aware that the act of eating can be a powerful statement of commitment to our own well-being, and at the same time to the creation of a healthier world. In *Diet for a New America*, you will learn how your food choices can provide ways to enjoy life to the fullest, while making it possible that life, itself, might continue. Heeding this message is without a doubt one of the most practical, economical, and potent things you can do today to heal not only your own life, but also the ecosystem on which all life depends. Reading this book will change your life.

Education in Hong Kong, 1941 to 2001

How deep learning—from Google Translate to driverless cars to personal cognitive assistants—is changing our lives and transforming every sector of the economy. The deep learning revolution has brought us driverless cars, the greatly improved Google Translate, fluent conversations with Siri and Alexa, and enormous profits from automated trading on the New York Stock Exchange. Deep learning networks can play poker better than professional poker players and defeat a world champion at Go. In this book, Terry Sejnowski explains how deep learning went from being an arcane academic field to a disruptive technology in the information economy. Sejnowski played an important role in the founding of deep learning, as one of a small group of researchers in the 1980s who challenged the prevailing logic-and-symbol based version of AI. The new version of AI Sejnowski and others developed, which became deep learning, is fueled instead by data. Deep networks learn from data in the same way that babies experience the world, starting with fresh eyes and gradually acquiring the skills needed to navigate novel environments. Learning algorithms extract information from raw data; information can be used to create knowledge; knowledge underlies understanding; understanding leads to wisdom. Someday a driverless car will know the road better than you do and drive with more skill; a deep learning network will diagnose your illness; a personal cognitive assistant will augment your puny human brain. It took nature many millions of years to evolve human intelligence; AI is on a trajectory measured in decades. Sejnowski prepares us for a deep learning future.

The Deep Learning Revolution

With his genre-defining work, *Space Raptor Butt Invasion*, Chuck Tingle proved that even gay dinosaur erotica could be nominated for a Hugo Award, the most prestigious honor in science fiction. Nobody could have expected what would happen when the story continued. Collected here is the entire trilogy of Chuck Tingle's history making *Space Raptor Butt* series. *SPACE RAPTOR BUTT INVASION* Space can be a lonely place, especially when you're stationed by yourself on the distant planet Zorbus. In fact, Lance isn't quite sure that can last the whole year before his shuttle pod arrives, but when a mysterious visitor appears at Lance's terraforming station, he quickly realizes that he might not be so alone after all. Soon enough, Lance becomes close with this mysterious new astronaut, a velociraptor. Together, they form an unlikely duo, which quickly begins to cross the boundaries of friendship into something much, much more sensual. It's not gay if it's a man and a dinosaur, is it? *SPACE RAPTOR BUTT REDEMPTION* After a year stationed on planet Zorbus, astronaut Lance Tanner and his raptor lover Orion return home to find that they are not greeted as heroes, but as villains. Unbeknownst to Lance, his space travels have been funded by the villainous Scoundrels Inc, a corporation that has deep ties to the illegal trade of unicorn tears and a destructive mining project at the core of the earth. Now Lance is on trial for a number of false charges; from having connections to the wicked Scoundrels, to being too strange for space. The opposing lawyer argues that space is only for serious astronauts, and that love between a raptor and a man is giving space travel a bad name. Lance is arguing that there's room to be weird in space. More importantly, Lance is arguing for the idea of love itself; that just because

something comes out of darkness doesn't mean it can't become a beacon of light. Of course, this all culminates in a hardcore dinosaur on astronaut pounding that will have your jaw on the courtroom floor! SPACE RAPTOR BUTT ASCENSION Soon after blasting off on their mission to find refuge for the people of Earth 1 on the dinosaur inhabited Earth 2, Orion and his space raptor lover Lance find a spaceship stow away, the notorious CEO of Scounrels Inc, Vam Dox. Vam claims that his intentions are pure, but it's hard to trust such a sad, strange man. After landing in Hugona, the planet capital of Earth 2, our heroes restrain Vam Dox and head off to secure an important diplomatic relationship with the pterodactyl president, but that's when all hell breaks loose. Soon, Vam Dox is storming the capital with a band of rabid dogs, and Lance and Orion are wrongly taking the blame! Fortunately, Lance and Orion know that the only cure for evil this strong is to prove their love in a hardcore gay encounter at the steps of the capital building. When the smoke clears, will Vam Dox be revealed as the super villain that he claims to be, or a meek, lonesome manbaby who is starved for attention?

Space Raptor Butt Trilogy

ONE BOY'S POWER TO SUMMON DEMONS WILL CHANGE THE FATE OF AN EMPIRE ... Demons, magic and epic adventure - introducing the first book in the New York Times bestselling Summoner Trilogy... Fletcher was nothing more than a humble blacksmith's apprentice, when a chance encounter leads to the discovery that he has the ability to summon demons from another world. Chased from his village for a crime he did not commit, he must travel with his demon to the Vocans Academy, where the gifted are trained in the art of summoning. The academy will put Fletcher through a gauntlet of gruelling lessons, training him as a battlemage to fight in the Hominum Empire's war against the savage orcs. Rubbing shoulders with the children of the most powerful nobles in the land, Fletcher must tread carefully. The power hungry Forsyth twins lurk in the shadows, plotting to further their family's interests. Then there is Sylva, an elf who will do anything she can to forge an alliance between her people and Hominum, even if it means betraying her friends. Othello is the first ever dwarf at the academy, and his people have long been oppressed by Hominum's rulers, which provokes tension amongst those he studies alongside. Fletcher will find himself caught in the middle of powerful forces, with nothing but his demon Ignatius to help him. As the pieces on the board manoeuvre for supremacy, Fletcher must decide where his loyalties lie. The fate of an empire is in his hands ... I was the Fool-king of Soho and the number-one slag in the Groucho Club, the second drunkest member of the world's drunkest band. This was no disaster, though. It was a dream coming true.' For Alex James, music had always been a door to a more eventful life. But as bass player of Blur - one of the most successful British bands of all time - his journey was more exciting and extreme than he could ever have predicted. In Bit of a Blur he chronicles his journey from a slug-infested flat in Camberwell to a world of screaming fans and private jets - and his eventual search to find meaning and happiness (and, perhaps most importantly, the perfect cheese), in an increasingly surreal world.

A take on the traditional German tale "Rapunzel" in a Southern African setting Zukiswa Wanner brings young readers a retelling of the classic fairy tale, "Rapunzel," with a uniquely South African twist. "Refilwe" is the story of the dreadlocked beauty who is stuck in a cave on top of a mountain awaiting her prince, Tumi. This take on the classic tale will have the children chanting, "Refilwe, Refilwe let down your locks . . . So I can climb the scraggy rocks " Based on the original version but reimagined for African children, the tale is enriched with magical illustrations by Tamsin Hinrichsen that will keep all children entranced and foster in them a love of reading.

Snitch2

This book analyses the language that ordinary people employ when discussing money, debt and financial behaviour. It documents and critiques this language from an array of disciplinary perspectives, with chapters on children's books, government infomercials, television poverty porn, the emotional experience of being indebted, and more. In doing so, it addresses common underlying questions concerning definitions of money and value, and scrutinises how people construct, negotiate and articulate meaning in these domains. This wide-ranging edited collection will be of interest to students and scholars of linguistics, sociology, communication, literature and anthropology.

Shaka Rising

Trans wizard Harriet Porber should be riding high after crafting one of the most powerful spells of all time, a magical effect that brings you exactly what you need, exactly when you need it. Unfortunately, once unleashed upon the world, this spell causes nothing but chaos and is promptly banned. Blacklisted from the wizarding community, Harriet moves to Las Vegas with her bad boy parasaurolophus husband, Snabe, moping around while Snabe performs a musical residency. But things change when the couple realize another book is starting, a sequel, and soon enough Harriet is rediscovering her love of magic with the help of old friends and mysterious new arrivals. Now Harriet is ready to stage her comeback magic show, affectionally titled The Theater of Love. Of course, this plan is easier said than done. A mega corporation named Just Kidding Recreation holds sway over all Las Vegas entertainment, using lawsuits and intimidation to squash the competition, and while a hypnotist serpent named The Great Magini insists she's there to help, it quickly becomes apparent her plans are much more sinister. Can trans wizard Harriet Porber thwart the dastardly plots of JK Recreation and The Great Magini? Maybe not on her own, but with a group of likeminded friends by her side, Harriet is about to discover the fourth-wall breaking strength of whole communities speaking truth to power and standing up against hate in the name of love.

DonBeing a firefighter is not just a job for me. It's a mission. As soon as that bell rings and I put on my protective gear, I'm all business. One false move could cost a life. Rescue Four is the best in Williamsport. One night a deadly fire almost kills my best friend and squad mate, Corey. A fire I know is the result of arson. As the squad investigator, it's my responsibility to get to the bottom of what happened that night. When the leading investigator at headquarters shows himself useless, I resort to working

with Jocelyn, Corey's twin sister. It's enough figuring out how I'm going to solve this case while also keeping her safe. The biggest challenge is figuring out how to get her to trust that I won't hurt her like the men in her past. Jocelyn Men can't be trusted when it comes to matters of the heart. That's not me being bitter. It's a reality that I've learned from experience. Now, I use my skills as a private investigator to help women find out the truth. I'm happy doing it, and it affords me a good living. While I don't hate all men, I do believe most are unapologetic cheaters. As such, I don't have any false notions of riding off into the sunset with one or getting my happily ever after. It's an easy stance to keep up as long as I stay away from the one man who brings out a longing in me I didn't know was still there. Distance proves difficult when I discover someone is after Rescue Four, and that same someone is responsible for my brother's injury. Once I step in to help Don, I have to remind myself falling for him is not an option. No matter how many nights he ends up in my bed. Love only leads to heartbreak. Unfortunately, I soon have to contend that Don is not only good at putting out fires. He's adept when it comes to starting them too. The fiery blaze of want and desire he ignites.

Trans Wizard Harriet Porber And The Theater Of Love

Trans wizard Harriet Porber is a master spellsmith who's found herself in a bit of a pickle. After finishing wizard college, Harriet made a name for herself by creating a hit viral spell, but has since failed to craft a follow up. Now Harriet's agent, Minerma, is breathing down her neck, suggesting that Harriet take a trip to an island off the coast of England for inspiration. Hoping for some peace and quiet to clear her head, Harriet Porber arrives to find that her new neighbor, an angsty bard named Snabe from the band Seven Inch Nails, is already there making a racket. This parasaurololphus spellcaster is a bad boy through and through, and with his incredible powers of metamagic, Snabe reveals that this layer of reality is much more than it seems. Could Harriet and Snabe really be characters in a parody romance novel? Soon enough, these two are discovering they have more similarities than differences: both trans, both strong, and both hoping to create a new spell that will change the world. But with the addition of two devious sentient motorcycles to the mix, Dellatrix and Braco, things start to get complicated. Now trans wizard Harriet Porber is caught up in a tale of magic and mystery where nothing is as it seems, except for one universal truth: love is real. This is a 52,000 word bad boy romance novel for adults. It contains some explicit scenes.

Triumph over adversity using proven Special Operations habits and mindsets with this inspiring guide from retired Navy SEAL and New York Times bestselling author Jason Redman. Adversity can often catch you by surprise and leave you struggling with what to do next. What if you could confront any adversity, from the biggest challenges -- the loss of your job, divorce, health issues, bankruptcy -- to normal daily challenges -- a late flight, a disappointing phone call, a missed promotion, a bad day -- and not just survive it, but thrive afterwards? Redman was horrifically wounded in Iraq in 2007 when he was shot at close range through the face and arm. After 40 surgeries, including extensive facial reconstruction and skin grafts, he came back from this experience stronger than ever -- despite carrying scars and injuries he will have for the rest of his life. Redman went on to launch two successful companies and speaks all over the country on how to build better leaders through his Overcome mindset. Overcome is based on extensive research and interviews with America's toughest warriors, including retired 4-star Admiral William McRaven, retired Navy SEAL Jocko Willink, retired 4-star General Stanley McChrystal, and others. In this book, Redman teaches: How to survive any life ambush How to move from defense to offense using the proactive techniques of SEAL teams How to strengthen your endurance during long-term trials How to rediscover and thrive in your life purpose How to lead your team (whether in business or family) to success How to compete with the top 1% in your field How to stay the course even when you want to quit And more Some people move through adversity and others fall underneath it. Learn how you can be counted among those who will Overcome.
