This Is Not a Big Deal on a Few Times Mission Is a Constant though Then We'Re GonNa Have To Worry about this So if You Have a Air for Why Won't You Change the Constant Estimation in Here Regression You'D Have if You Knew It You Would So if I Know this Is for I Just Asked Them It's a Crack Board I'M all Set but if I Just Know that There's Probably a Nonzero B Mountain or Its Value Then I Can't I May Know this Design but Not in Magnitude

But if There's some Way To Actually Know this You Can't Get It out the Explanation because the Estimate So Here's a Line and It's Not Going To Tell You whether They Have a Zero Mean or Not so You Have To Get that for Operatory Information and It's Barely an Air So this Is Only a Problem if You Care about the Concept All Right Homoscedasticity What's Canasta City Mean Parents this Means Same Variance this Is the Assumption that the Variance of Your Errors Are Constant

That's Likely To Happen Your Most Basic Law the Quantity Demanded Is a Plus B Times the Price plus some Hair Quantity Supply in this Model It Turns Out that this π_i this α_i Are Going To Be Related They'Re Going To Be Correlated I Tried To Estimate this Model One Equation at a Time How Do You Do To Happen Effect the Same Day That You See There's One Problem We Have To Deal with Later to Is Simultaneous Equations these both Have a Cubit of π_i these Q_i 's Are the Same You Only See One Q Tomorrow but Anyway in this Model this V_i Is Going To Be a Random Variable and if It Is Then You'Ve Got Trouble We'LL Come Back to that Later I Should Introduce Them
