DIRECTORY OF CORPORATE COUNSEL.

"This startling, vital book deserves our attention." —San Francisco Chronicle For fans of War Dogs and Bad Blood, an explosive look inside the rush to profit from the COVID-19 pandemic, from the award-winning ProPublica reporter who saw it firsthand. The United States federal government spent over \$10 billion on medical protective wear and emergency supplies, yet as COVID-19 swept the nation, life-saving equipment such as masks, gloves, and ventilators was nearly impossible to find. In this brilliant nonfiction thriller, called "revelatory" by The Washington Post, award-winning investigative reporter J. David McSwane takes us behind the scenes to reveal how traders, contractors, and healthcare companies used one of the darkest moments in American history to fill their pockets. Determined to uncover how this was possible, he spent over a year on private jets and in secret warehouses, traveling from California to Chicago to Washington, DC, to interview both the most treacherous of profiteers and the victims of their crimes. Pandemic, Inc. is the story of the fraudster who signed a multi-million-dollar contract with the government to provide lifesaving PPE, and yet never came up with a single mask. The Navy admiral at the helm of the national hunt for additional medical resources. The Department of Health whistleblower who championed masks early on and was silenced by the government and conservative media. And the politician who callously slashed federal emergency funding and gutted the federal PPE stockpile. Winner of the Goldsmith Prize for Investigative Reporting, McSwane connects the dots between backdoor deals and the spoils systems to provide the definitive account of how this pandemic was so catastrophically mishandled. Shocking and monumental, Pandemic, Inc. exposes a system that is both deeply rigged, and singularly American.

Building Systems Magazine (BSM) is an award winning United States-based trade magazine read by builders, developers and general contractors using or considering using innovative construction technologies. Once commonly known as "pre-fab," today's modern building systems employ innovative materials and techniques to create residential or commercial structures in a factory setting in a fraction of the time it takes to site build. BSM focuses mainly on log, timber frame, modular, panel, and structural insulated panel building technologies. Since factory fabrication and site preparation take place simultaneously, structures are finished and ready for occupancy in weeks, rather than months or years as required by conventional site-building schedules.

In Detail Apex is an on-demand programming language providing a complete set of features for building business applications - including data models and objects to manage data. Apex being a proprietor programming language from Salesforce to be worked with multi tenant environment is a lot different than traditional OOPs languages like Java and C#. It acts as a workflow engine for managing collaboration of the data between users, a user interface model to handle forms and other interactions, and a SOAP API for programmatic access and integration. Apex Design Patterns gives you an insight to several problematic situations that can arise while developing on Force.com platform and the usage of Design patterns to solve them. Packed with real life examples, it gives you a walkthrough from learning design patterns that Apex can offer us, to implementing the appropriate ones in your own application. Furthermore, we learn about the creational patterns that deal with object creation mechanism and structural patterns that helps to identify the relationship between entities. Also, the behavioural and concurrency patterns are put forward explaining the communication between objects and multi-threaded programming paradigm respectively. We later on, deal with the issues regarding structuring of classes, instantiating or how to give a dynamic behaviour at a runtime, with the help of anti-patterns. We learn the basic OOPs principal in polymorphic and modular way to enhance its capability. Also, best practices of writing Apex code are explained to differentiate between the implementation of appropriate patterns. This book will also explain some unique patterns that could be applied to get around governor limits. By the end of this book, you will be a maestro in developing your applications on Force.com for Salesforce

Go Beyond the FAR! The guidance contained in the almost 2000 pages of the Federal Acquisition Regulation and the various agency supplements are just a part of the resources government acquisition professionals need to do their jobs effectively. Accessing and understanding case law is equally impor-

tant to a thorough understanding of government contracting. Legal decisions explain the Government Accountability Office's and the courts' views on how procurement statutes and regulations apply in a wide range of situations. Case law also gives potential bid protesters and agencies a way to gauge the likely outcome of a protest. Until now, it has been difficult to find and understand the legal decisions that could be relevant to a particular situation. Key Case Law Rules for Government Contract Formation changes that by organizing and explaining the most important protest grounds in a readily accessible and comprehensible way. With an emphasis on more recent cases, the book is organized around the key protest grounds, such as pricing issues, allegations that the government wrongfully prevented competition, or improper sealed-bidding procedures. Bridging the gap of understanding between the legal and the contracting communities, this book is a much-needed addition to the essential resources for acquisition professionals.
