STEM for All Ages

The brothers who invented the first successful aircraft were not Orville and Wilbur. They were preceded by the Montgolfier brothers 120 years earlier in a type of aircraft still in wide use today. 150 years before them, the Celebi brothers made the first survivable rocket and intercontinental flights. With the goal of providing an interesting learning experience, the book's focus is not just on STEM (Science, Technology, Engineering, Math). Also included is analysis of Cause & Effect and a lot of surprising history. So it is not just about HOW things work, it is also about WHY they happened that way, and the consequences. Roughly every 500 years new technology completely disrupts society, changing borders, laws, and the way people live and work. It happened again with the emergence of the Digital Age. Because aviation involves many fields of science, it is a particularly interesting way to show how STEM is a continuum of mutually supporting elements. Applications of chemistry, physics, astronomy, navigation, programming, and paradigm paralysis are presented in a hands-on understandable way.

This textbook is written to thoroughly cover the topic of introductory chemistry in detail—with specific references to examples of topics in common or everyday life. It provides a major overview of topics typically found in first-year chemistry courses in the USA. The textbook is written in a conversational question-based format with a well-defined problem solving strategy and presented in a way to encourage readers to “think like a chemist” and to “think outside of the box.” Numerous examples are presented in every chapter to aid students and provide helpful self-learning tools. The topics are arranged throughout the textbook in a “traditional approach” to the subject with the primary audience being undergraduate students and advanced high school students of chemistry.
