The full version of Introduction Development Economics is available here, free of charge.

Development Economics

Following the 2007–2009 financial and economic crises, there has been an unprecedented demand among economics students for an alternative approach, which offers a historical, institutional and multidisciplinary treatment of the discipline. Economic development lends itself ideally to meet this demand, yet most undergraduate textbooks do not reflect this. This book will fill this gap, presenting all the core material needed to teach development economics in a one semester course, while also addressing the need for a new economics and offering flexibility to instructors. Rather than taking the typical approach of organizing by topic, the book uses theories and debates to guide its structure. This will allow students to see different perspectives on key development questions, and therefore to understand more fully the contested nature of many key areas of development economics. The book can be used as a standalone textbook on development economics, or to accompany a more traditional text.

Development Economics

Gerard Roland's new text, Development Economics, is the first undergraduate text to recognize the role of institutions in understanding development and growth. Through a series of chapters devoted to specific sets of institutions, Roland examines the effects of institutions on growth, property rights, market development, and the delivery of public goods and services and focuses. With the most comprehensive and up to date treatment of institutions on development, Roland explores the important questions of why some countries develop faster than others and why some fail while others are successful.

Development Economics

This second edition of Development Economics: Theory and Practice continues to provide students and practitioners with the perspectives and tools they need to think analytically and critically about

the current major economic development issues in the world. Alain de Janvry and Elisabeth Sadoulet identify seven key dimensions of development—growth, poverty, vulnerability, inequality, basic needs, sustainability, and quality of life—and use them to structure the contents of the text. The book gives a historical perspective on the evolution of thought in development. It uses theory and empirical analysis to present readers with a full picture of how development works, how its successes and failures can be assessed, and how alternatives can be introduced. The authors demonstrate how diagnostics, design of programs and policies, and impact evaluation can be used to seek new solutions to the suffering and violence caused by development failures. In the second edition, more attention has been given to ongoing developments, such as: pursuit of the Sustainable Development Goals continuously rising global and national inequality health as a domestic and international public good cash transfers for social protection carbon trading for sustainability This text is fully engaged with the most cutting-edge research in the field and equips readers with analytical tools for impact evaluation of development programs and policies, illustrated with numerous examples. It is underpinned throughout by a wealth of student-friendly features, including case studies, quantitative problem sets, end-of-chapter questions, and extensive references. The companion website contains Excel and Stata exercises for students alongside materials for instructors. This unique text is ideal for those taking courses in development economics, economic growth, and development policy, and will provide an excellent foundation for those wishing to pursue careers in development.

Empirical Development Economics

Understanding why so many people across the world are so poor is one of the central intellectual challenges of our time. This book provides the tools and data that will enable students, researchers and professionals to address that issue. Empirical Development Economics has been designed as a hands-on teaching tool to investigate the causes of poverty. The book begins by introducing the quantitative approach to development economics. Each section uses data to illustrate key policy issues. Part One focuses on the basics of understanding the role of education, technology and institutions in determining why incomes differ so much across individuals and countries. In Part Two, the focus is on techniques to address a number of topics in development, including how firms invest, how households decide how much to spend on their children's education, whether microcredit helps the poor, whether food aid works, who gets private schooling and whether property rights enhance investment. A distinctive feature of the book is its presentation of a range of approaches to studying development questions. Development economics has undergone a major change in focus over the last decade with the rise of experimental methods to address development issues; this book shows how these methods relate to more traditional ones. Please visit the book's website for more information: www.empiricalde.com

Development Economics

Development Economics: Theory, Empirical Research, and Policy Analysis by Julie Schaffner teaches students to think about development in a way that is disciplined by economic theory, informed by cutting-edge empirical research, and connected in a practical way to contemporary development efforts. It lays out a framework for the study of developing economies that is built on microeconomic foundations and that highlights the importance in development studies of transaction and transportation costs, risk, information problems, institutional rules and norms, and insights from behavioral economics. It then presents a systematic approach to policy analysis and applies the approach to policies from around the world, in the areas of targeted transfers, workfare, agricultural markets, infrastructure, education, agricultural technology, microfinance, and health.

Handbook of Development Economics

This handbook organizes chapters by sets of policies that are important components of discussions about how to facilitate development. In each chapter, authors identify and discuss the relevant theoretical and empirical literature that describes the fundamental problems that the policies seek to remedy or ameliorate, as well as the literature that evaluates the effects of the policies. It presents an accurate, self-contained survey of the current state of the field. It summarizes the most recent discussions, and elucidates new developments. Although original material is also included, the main aim is the provision of comprehensive and accessible surveys

Teaching of Development Economics

First Published in 1967. This volume includes papers and proceedings presented on the Teaching of development economics (Its Position in the Present State of Knowledge), at the MANCHESTER CONFERENCE ON TEACHING ECONOMIC DEVELOPMENT, APRIL 1964.

Development Economics

A result of more than four decades of teaching experience, this book deals with the problems of economic growth, development and eradication of poverty and unemployment. The book also includes an analytical study of important issues of environment and sustainable development. The book not only explains the models and theories of economic growth but also critically evaluates their relevance to developing countries. A major highlight of discussion in the context is the exploration of the widely accepted Amartya Sen's Capability Approach to development.

Development Economics in the Twenty-First Century

Development Economics has been identified as a homogeneous body of theory since the 1950s, concerned both with the study of development issues and with the shaping of more effective policies for less advanced economies. Development Economics in the Twenty-First Century brings together an international contributor team in order to explore the origins and evolution of development economics. This book highlights the different elements of 'high development theory' through a precise reconstruction of the different theoretical approaches that developed between the 1950s and the 1970s. These include the theory of balanced and unbalanced growth theory, the debate on international trade, the concept of dualism, dependency theory, structuralism and the analysis of poverty and institutions. The chapters highlight the relevance and usefulness of these analyses for the contemporary theoretical debate on development issues. Comparative perspectives are explored and analysed, including those of Keynes, Hirschman, Krugman and Stiglitz. The chapters situate development economics within current debates among economists and historians of economic thought, providing a platform for future research. This book is suitable for researchers and students with an interest in Development Economics, the History of Economic development and the Economics of Developing Countries.

Essentials of Development Economics, Third Edition

Written to provide students with the critical tools and approaches used by development economists, Essentials of Development Economics represents an alternative approach to traditional textbooks on the subject. Compact and less expensive than other textbooks for undergraduate development economics courses, Essentials of Development Economics offers a broad overview of key topics and methods in the field. Its fourteen easy-to-read chapters introduce cutting-edge research and present best practices and state-of-the-art methods. By mastering the material in this time-tested book, students will have the conceptual grounding needed to move on to more advanced development economics courses. This new edition includes: updated references to international development policy process and goals substantial updates to several chapters with new and revised material to make the text both current and policy relevant replacement of several special features with new ones featuring widely cited studies

The Development Economics Reader

This book draws together the most authoritative articles on development economics published in the past few years, is aimed at undergraduate level and is suitable for students with little or no background in economics. The main themes include poverty, foreign aid, agriculture and human capital and amongst those whose work appears can be counted Amartya Sen, Jeffrey Sachs, Jagdish Bhagwati, Joseph Stiglitz, Paul Romer, Dani Rodrik, William Easterly, Robert Barro, Kenneth Arrow, Hernando de Soto, Daron Acemoglu, Muhammad Yunus, Anne Krueger, Abhijit Banerjee, Esther Duflo, Michael Kremer and Martin Feldstein. The reader focuses on the most recent and up-to-date contributions to the field of development economics. Instead of collecting "classic" contributions which are already available through many sources the articles chosen reflect recent developments in the discipline (for instance, in the area of geography and development) and include contributions that address recent events (the dramatic resurgence of a debt relief movement). "The Development Economics Reader" should be an invaluable resource for all students of the discipline.

Development Economics

Interest in the problems of underdeveloped economies has increased since the early 1950s, and is now a primary topic in university courses. When this book was originally published, it reflected a sense among some economists that current, orthodox economic theory is inadequate in this field. The volume includes leading American and non-American economists. The discussion of the content of courses was, in the nature of things, an extension of the discussion on the state of knowledge and reflects the period immediately prior to initial publication. Some of the issues continue to be debated, including the balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages, political science, sociology or even engineering. Development economics is now an established subject in the teaching curricula of most universities. The attention of the volume is focused on the problems of creating courses of study in subjects relevant to development within some framework specially designed for the purpose. The problems of organizing such courses concerned the length of courses, the type of students to which they would cater, the qualifications and standards required for admission and successful completion of courses, and so on. The balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages (in connection with area studies), political science, sociology or even engineering, the merits of methods like case studies, workshops and training in field work, are all discussed.

Development Economics: A Policy Analysis Approach

This innovative textbook focuses upon economic policy in the context of developing countries. The aim is to show how economic theory can be applied to the real and urgent challenges facing the developing world. To achieve its unique policy focus the text includes seventeen country case studies (in the form of assigned questions) as well as comprehensive theoretical coverage. The topics covered by the book are those most relevant to the developing world such as how to accelerate economic growth, ways in which foreign savings can be used to promote development, and the choice of policies to successfully stabilize inflationary and debt-burdened economies. The country case studies featured are those most closely illustrative of the theory. Solutions for nine of the cases are provided in the text; solutions for the other eight are made available to instructors. Development Economics: A Policy Analysis Approach is ideal for undergraduate and introductory graduate courses. It provides a hands-on guide to making and assessing economic policy decisions in the developing world.

Economics and Development Studies

Development studies textbooks and courses have sometimes tended to avoid significant economic content. However, without an understanding of the economic aspects of international development many of the more complex issues cannot be fully comprehended. Economics and Development Studies makes the economic dimension of discourse around controversial issues in international development accessible to second and third year undergraduate students working towards degrees in development studies. Following an introductory chapter outlining the connections between development economics and development studies, this book consists of eight substantive chapters dealing with the nature of development economics, economic growth and structural change, economic growth and developing countries, economic growth and economic development since 1960, the global economy and the Third World, developing countries and international trade, economics and development policy, and poverty, equality and development economists, with a tenth concluding chapter. This book synthesizes existing development economics literature in order to identify the salient issues and controversies and make them accessible and understandable. The concern is to distinguish differences within the economics profession, and between economists and non-economists, so that the reader can make informed judgments about the sources of these differences, and about their impact on policy analysis and policy advice. The book features explanatory text boxes, tables and diagrams, suggestions for further reading, and a listing of the economic concepts used in the chapters.

Chinese Economic Development

This book outlines and analyzes the economic development of China between 1949 and 2007. Rather than being narrowly economic, the book addresses many of the broader aspects of development, including literacy, morality, demographics and the environment. The distinctive features of this book are its sweep and that it does not shy away from controversial issues. For example, there is no question that aspects of Maoism were disastrous but Bramall argues that there was another side to the whole

programme. More recently, the current system of government has presided over three decades of very rapid economic growth. However, the author shows that this growth has come at a price. Bramall makes it clear that unless radical change takes place, Chinese growth will not be sustainable. This large, comprehensive text is relevant to all those studying the economic history of China as well as its contemporary economy. It is also useful more generally for students and researchers in the fields of international and development economics.

Teaching of Development Economics

First Published in 1967. This volume includes papers and proceedings presented on the Teaching of development economics (Its Position in the Present State of Knowledge), at the MANCHESTER CONFERENCE ON TEACHING ECONOMIC DEVELOPMENT, APRIL 1964.

Factors in Economic Development

First published in 1961, this work is a compendium of essays written by esteemed economist Sir Alexander Cairncross, pertaining to the theme of economic development. A wide cross-section of factors are taken into account in this extensive collection of articles, amongst which are the importance of investment and technical progress; trade; administration and planning; and the role of education.

Handbook of Development Economics

The field of development economics has evolved since volume 3 of the Handbook of Development Economics was published more than a decade ago. Volume 4 takes stock of some of the newer trends and their implications for research in the field and our understanding of economic development. The handbook is divided into four sections which reflect these developments, of which the first deals with agricultural and rural development. Section two is concerned with developments in the theory and evidence regarding public goods and political economy. The third section is focused on the behavior of households and individuals regarding various aspects of human capital investments, in the face of the various constraints, particularly market incentives and public goods. The final section contains papers that describe the different methods now available, both experimental and non-experimental, to conduct program evaluations, as well as describing papers that implement these methods. The authors of the chapters are all experts in the fields they survey and extend, and this volume promises to be an invaluable addition to the Handbooks in Economics series and a useful reference to graduate students, researchers and professionals in the field of development economics. * Presents an accurate, self-contained survey of the current state of the field. * Summarizes the most recent discussions in journals, and elucidates new developments. * Although original material is also included, the main aim is the provision of comprehensive and accessible surveys.

Encyclopedia of the Developing World

A RUSA 2007 Outstanding Reference Title The Encyclopedia of the Developing World is a comprehensive work on the historical and current status of developing countries. Containing more than 750 entries, the Encyclopedia encompasses primarily the years since 1945 and defines development broadly, addressing not only economics but also civil society and social progress. Entries cover the most important theories and measurements of development; relate historical events, movements, and concepts to development both internationally and regionally where applicable; examine the contributions of the most important persons and organizations; and detail the progress made within geographic regions and by individual countries.

Development Economics

Broad beliefs about the economics of "developing countries"™ and of the development process have changed considerably since the subject became of wide interest in the 1950s; due largely to changes in the world and in the application of economic policies within developing countries. Subjects such as environment, gender, poverty, famine and globalization have come to be of increasingly important public interest. The extreme divergence of experience among regions of the world has also made it more and more questionable whether it even makes sense to think of a single and distinctive "economics of developing countries"™. This textbook presents a concise and up-to-date examination of the field of development economics, bringing together historical perspectives, current

issues and policy implications. Each chapter can be read as a stand-alone unit, or as part of the wider economic debates presented throughout the book.

Contemporary Issues in Development Economics

This new collection of articles puts the very latest issues in economic development under the microscope, exploring them from a variety of perspectives. Beginning with an assessment of the current state of play in development, the authors move forward to examine neglected issues such as human development, gender, brain drain, military expenditure and post-colonial theory. While analysing the problems of external debts, technology transfer and new theories of international trade, the relationship between developing and developed economies is fully explored. The book also examines the important topics of financial reform, structural adjustments and the role of the IMF in the new financial architecture. The highly respected contributors subject these critical issues to thorough analysis with suggestions towards resolving some of these problems, making this an indispensable book that researchers and students of development economics cannot afford to miss.

Essentials of Development Economics

Written to provide students with the critical tools used in today's development economics research and practice, *Essentials of Development Economics* represents an alternative approach to traditional textbooks on the subject. Compact and less expensive than other textbooks for undergraduate development economics courses, *Essentials of Development Economics* offers a broad overview of key topics and methods in the field. Its fourteen easy-to-read chapters introduce cutting-edge research and present best practices and state-of-the-art methods. Each chapter concludes with an embedded QR code that connects readers to ancillary audiovisual materials and supplemental readings on a website curated by the authors. By mastering the material in this book, students will have the conceptual grounding needed to move on to higher-level development economics courses.

Development Economics

Development Economics: Theory and Practice provides students and practitioners with the perspectives and the tools they need to think analytically and critically about the current major economic development issues in the world. Alain de Janvry and Elisabeth Sadoulet identify seven key dimensions of development; growth, poverty, vulnerability, inequality, basic needs, sustainability, and quality of life, and use them to structure the contents of the text. This book gives a historical perspective on the evolution of thought in development. It uses theory and empirical analysis to present readers with a full picture of how development works, how its successes and failures can be assessed, and how alternatives can be introduced. The authors demonstrate how diagnostics, design of programs and policies, and impact evaluation can be used to seek new solutions to the suffering and violence caused by development failures. This text is fully engaged with the most cutting edge research in the field, and equips readers with analytical tools for the impact evaluation of development programs and policies, illustrated with numerous examples. It is underpinned throughout by a wealth of student-friendly features including case studies, quantitative problem sets, end-of-chapter questions, and extensive references. This unique text aims at helping readers learn about development, think analytically about achievements and alternative options, and be prepared to compete on the development job market.

Disasters and the Networked Economy

Mainstream quantitative analysis and simulations are fraught with difficulties and are intrinsically unable to deal appropriately with long-term macroeconomic effects of disasters. In this new book, J.M. Albala-Bertrand develops the themes introduced in his past book, *The Political Economy of Large Natural Disasters* (Clarendon Press, 1993), to show that societal networking and disaster localization constitute part of an essential framework to understand disaster effects and responses. The author's last book argued that disasters were a problem of development, rather than a problem for development. This volume takes the argument forward both in terms of the macroeconomic effects of disaster and development policy, arguing that economy and society are not inert objects, but living organisms. Using a framework based on societal networking and the economic localization of disasters, the author shows that societal functionality (defined as the capacity of a system to survive, reproduce and develop) is unlikely to be impaired by natural disasters. This book will be of interest to scholars and practitioners involved in disaster analysis and response policy, and will also be relevant to students of development economics.

Development Economics

Since the inception of development economics in the post-World War II period, most of its proponents have prescribed the adoption of western institutions as the path for prosperity – the unequivocal solution for poverty, illiteracy, hunger, inequality, and violence in the world. Seventy years of attempts, or at least the pretense thereof, to reproduce the western model in completely different historical and cultural contexts have proven to be no more than a mirage for most. Faced with this scenario, why do economists insist on the ideas of development, convergence, and emulation of the lifestyle of western countries? Is it possible to disassociate development from multidimensional instability, dependency, subordination, and exploitation? Is the current social, political, ecological, and economic organized destabilization observed in the western countries a model to follow, a desirable end of history? These questions raised earlier by some fellow economists, have become ever more pressing in the present context of generalized instability. The book questions how ethical and professionally responsible it is for economists to continue to undiscerningly prescribe miraculous one-size-fits-all market-oriented models to solve socio-economic problems everywhere. The contributors of this edited volume invite the readers to consider these questions and further similar inquiries in the future. The chapters in this book were originally published as a special issue of the journal *Review of Political Economy*.

African Economic Development

Sub-Saharan Africa is at a turning point. The barriers to economic growth seen in the 1980-2000 era are disappearing and new optimism is spreading. However, difficult goals of eliminating poverty, achieving equity and overcoming environmental threats continue. This much-needed and insightful textbook has been written to help us understand this combination of emerging improvements and significant challenges. Opening with an analysis of the main theories relating to development in Sub-Saharan Africa, the book explores all the key issues, including: Human development; Rapid urbanization; Structural and gender dimensions; Sustainable development and environmental issues; and Africa's role in the world economy. The authors use economic tools and concepts throughout, in a way that makes them accessible to students without an economics background. Readers are also aided by a wide range of case studies, on-the-ground examples and statistical information, which provide a detailed analysis of each topic. This text is also accompanied by an e-resource, featuring additional sources for students and instructors. *African Economic Development* is a clear and comprehensive textbook suitable for courses on African economic development, development economics, African studies and development studies.

Targeting Regional Economic Development

Targeting regional economic development (TRED) has a long and rich tradition among academic economists and in the world of economic development practitioners. This book builds on a series of workshops and papers organized by The Northeast Regional Center for Rural Development (NERCRD) at the Pennsylvania State University and the Rural Policy Research Centre (RUPRI) at the University of Missouri. Through the coordinated efforts of NERCRD and RUPRI, a network of university based researchers and Extension education specialists was developed and provides the foundation of this new edited volume. For the first time in a single book, Goetz, Deller and Harris present an innovative

approach through a collection of chapters discussing industry targeting and the relevance of TRED as an important analytical tool for practical targeting purposes. The papers present issues surrounding community economic development, clusters in industry and rural communities and the role of agglomeration economies. The book provides the reader with insights into not only the theoretical foundations of targeting as well as empirical methods, but also approaches for using the community-level analysis to affect policy directions.

The Economics of Industrial Development

The spread of the manufacturing industry is an important part of economic development, creating jobs, new products and trade and investment links between countries. Understanding this process is an important part of understanding how countries develop and how they are affected by current globalization. The economic geography of the world has been changing significantly in the last few decades with old established industrial centres in the developed countries in decline, and new centres emerging in countries that were once thought of as poor and still developing. However, this process has been very uneven with some parts of the developing world still largely non-industrial. This book aims to explain this process from the perspective of developing countries. It charts current trends in industrial development drawing on available statistics and explores different perspectives on the role the manufacturing industry can play. The book covers topics including: aspects of trade policy as they affect industry the international rules of the World Trade Organisation the network of links between firms in different parts of the world economy. Separate chapters examine: the special role of small firms and of technology in industrialisation government policy towards the encouragement of industry, drawing particularly on the experience of economies in East Asia (the original Asian Tigers) recent developments in China and India and their implications for other countries. The book draws on simple concepts of economic theory but avoids a technical mathematical approach and should be accessible to a wide audience. It extends and updates the author's earlier work on industrialisation published by Routledge (Industry in Developing Countries, 1990 and Industrialisation and Globalisation, 2002) and aims to present a comprehensive overview of these important contemporary issues. The book is suitable for both undergraduate and graduate level courses, but will also be invaluable to professionals working in development.

Economics of Development

This classic, bestselling textbook provides a comprehensive introduction to the field of development economics. The 10th edition of Tony Thirlwall's book, now co-written with Penélope Pacheco-López, provides a clear, comprehensive and rigorous introduction to the theory of development economics and the experience of developing countries. Balancing a historic approach with current data and references, it provides a wide-ranging analysis of the subject. This all-inclusive methodology succeeds at representing different schools of thought with a balance of micro and macro topics. An ideal textbook for undergraduate students of economics and other social sciences, it is also suitable for upper undergraduate and master's level modules on development economics as an option on a non-economics degree. New to this Edition: - A brand new chapter on human capital: education, nutrition, health, and the role of women in development - New material on the Sustainable Development Goals, the measurement of poverty, and the multidimensional poverty index - Discussion of randomized control trials - The role of structural change in economic development - New IMF lending facilities

Development Economics

Interest in the problems of underdeveloped economies has increased since the early 1950s, and is now a primary topic in university courses. When this book was originally published, it reflected a sense among some economists that current, orthodox economic theory is inadequate in this field. The volume includes leading American and non-American economists. The discussion of the content of courses was, in the nature of things, an extension of the discussion on the state of knowledge and reflects the period immediately prior to initial publication. Some of the issues continue to be debated, including the balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages, political science, sociology or even engineering. Development economics is now an established subject in the teaching curricula of most universities. The attention of the volume is focused on the problems of creating courses of study in subjects relevant to development within some framework specially designed for the purpose. The problems of organizing such courses concerned

the length of courses, the type of students to which they would cater, the qualifications and standards required for admission and successful completion of courses, and so on. The balance of instruction between macro- and micro-economics, the place of mathematics and econometrics, the question of the desirability of linking the study of economics with studies in administration, languages (in connection with area studies), political science, sociology or even engineering, the merits of methods like case studies, workshops and training in field work, are all discussed.

Small Enterprises and Economic Development

Micro and small enterprises (MSEs) have been recognized as a major contemporary source of employment and income in a growing number of developing countries. Yet, relatively little is known about the characteristics and patterns of change in these enterprises. This volume examines the dynamics of MSEs in the development process. Drawing on a unique set of surveys conducted in twelve countries in Africa and Latin America the authors map the patterns of change in MSEs in the developing world. Subjects covered include: * significance of new start and closure rates of MSEs * factors involved in expansion rates and growth patterns of MSEs * the role of gender in MSEs evolution.

Development Economics in Action

First published in 1978, *Development Economics in Action* is a renowned study of policies in Ghana, one of Africa's most closely watched economies. In this new edition three additional chapters provide a detailed account of 1978-2008.

Latin American Economic Development

Latin America is one of the most intriguing parts of the world. The region's illustrious history, culture, and geography are famous internationally, but in terms of economics, Latin America has been generally associated with problems. For many, the combination of a resource rich region and poor economic conditions has been a puzzle. This extensively revised and updated second edition of *Latin American Economic Development* continues to provide the most up to date exploration of why the continent can be considered to have underperformed, how the various Latin American economies function, and the future prospects for the region. The book addresses the economic problems of Latin America theme by theme. Changes and new features in this new edition include: Expanded coverage of how institutions affect economic growth in Latin America Many new boxes and questions for review and discussion New material on how climate change affects the region Updated material to reflect the ongoing macroeconomic stability of the past decade A new chapter on the political economy of Latin America The book provides a comprehensive text for undergraduate economics courses on Latin America, and is also suitable for use by students in other disciplines looking for a wide-ranging guide to the region. This book will continue to be an invaluable resource for undergraduates looking at Latin American economics, growth, and development.

Thoughts on Economic Development in China

This book is about mutual influences of thinking about economic development in China and in the West, from the 18th century until the present. Its chapters are contributed by development economists and historians of thought from China and other parts of the world. The book describes important stages in the evolution, cross-fertilization and contextual modification of ideas about economic order, development and institutional change. It illustrates how Western concepts and theories have been adopted and adapted to Chinese conditions in different waves of modernization from the late 19th century until the present and that this was and is no one-way traffic. The book examines to what extent pre-classical thinking in the West, in particular French Physiocracy in mid-18th century, was influenced by China as an ideal and a source of ideas, at a time when China was the largest and most advanced economy in the world. It discusses to what extent different approaches of modern Western-style economics, in particular in the fields of development economics and institutional economics, can be used to understand the rapid transitions and developments of the Chinese economy in recent decades, and to what extent they need to be modified in the light of new experiences and insights. Against this background, several contributions to the volume provide assessments of the current state of economic science and teaching in China, in particular with regard to Chinese views on Western economics. The book should be of interest to those who are interested in the economic history of China.

Institutions, Social Norms and Economic Development

In order for economic specialization to develop, it is important that well-defined property rights are established and that suspicion and fear of fraud do not pervade transactions. Such conditions cannot be created ex abrupto, but must somehow evolve. What needs to develop is not only suitable practices and rules themselves, but also the public agencies and moral environment without which generalized trust is difficult to establish. The cultural endowment of societies as they have developed over their particular histories is bound to play a major role in this regard, and the matter of cultural endowment is one of the central themes of this book. On the other hand, division of labour does not only require well-enforced property rights and trust in economic dealings. It is also critically conditioned by the thickness of economic space, itself dependent on population density. This provides the second major theme of the volume: market development, including the development of private property rights is not possible, or will remain very incomplete, if populations are thinly spread over large areas of land. The book makes special reference to sub-Saharan Africa.

Social Capital and Economic Development

This immensely readable book by Patrick François provides an original insight into the increasingly fashionable topic that is social capital. In a unique, original study, the author emphasises trustworthiness as a vital feature of social capital and argues that standard economic treatments of this phenomenon are inadequate. The book's richer evolutionary treatment of this is embedded in a neoclassical model and will prove to be essential reading for economic development scholars as well as those interested in development studies and economic thought in general.

Diverse Paths of Economic Development

This book is designed as a core textbook for graduate students and advanced undergraduates of development economics. Richard Pomfret uses the theme of the diverse experiences of developing countries to illustrate the full range of topics conventionally studied in development economics courses - industrialization, agriculture, labour, trade policy, and others. a single entity. In fact, the countries conventionally considered to form this group contain countries with widely divergent circumstances and prospects. The newly industrialized countries of South-East Asia have as much in common, if not more, with Western Europe as they do with the poverty stricken countries of sub-Saharan Africa. The problems faced by Latin American countries are very different from those of the Middle East or the Indian sub-Continent. Pomfret's extensive use of case studies from a wide variety of countries demonstrates these different paths of economic development and brings the subject alive for students.

Theories of Economic Development and Growth

First published in 1966, this work summarises the theories of economic growth, both ancient and modern, and presents them in a form particularly suitable for university students, both in the developing world and elsewhere. The objective is to enable students to assess the major factors making for economic development and to encourage them to think about ways of applying their knowledge to the particular problems of their own countries. In addition there is a special survey of growth and of limiting factors in the economies of underdeveloped countries, with an important analysis of the economic results of planning in the USSR.

Development Studies and Colonial Policy

Sussex has a worldwide reputation for excellence in the field of development studies, and the University's Culture, Development and Environment Centre (CDE) within the School of Social Sciences and Cultural Studies plays a strong role in graduate teaching in this field. CDE is concerned not simply with 'development', but also more broadly with the common problems that have arisen through globalisation and the social, cultural, political, economic and environmental change that characterises our world. Our focus is also on the relationship between the 'North' and the 'South', including colonial.

The Process of Economic Development

This textbook includes discussions of such topics as the environment, the debt case, export-led industrialization, import substitution industrialization, growth theory and technological capability.
