Handbook of Children and the Media

'Handbook of Children and the Media' brings together the best-known scholars from around the world to summarize the current scope of the research in this field.

Resounding International Relations

This book explores a provocative area of inquiry for critical theory and research into world politics and popular culture: music. Not just because political science barely engages with anything musical, but also because it is clear that many opportunities for critical scholarship and reflection on global politics and economics are present in the spaces and relationships created by organized sound. It is easy to focus on the textual elements of music, but there is more at stake than just the words. Critical reflection on the intersections between music and politics also need to take into account the visceral and non-verbal elements such as counterpoint and harmony, polyphony and dissonance, noise, rhymes, rhythms, performance and the visual/aural dimensions to music-making.

Care of the Combat Amputee

This resource addresses all aspects of combat amputee care ranging from surgical techniques to long-term care, polytrauma and comorbidities such as traumatic brain injury and burns, pain management, psychological issues, physical and occupational therapy, VA benefits, prosthetics and adaptive technologies, sports and recreational opportunities, and return to duty and vocational rehabilitation.

Warrior Transition Leader Medical Rehabilitation Handbook

NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT- OVERTOCK SALE -- Significantly reduced list price This book is targeted toward helping Army leaders of all levels to assist wounded. injured, and ill soldiers and their families while undergoing medical rehabilitation or interacting with essential healthcare and community reintegration services. Many facets are involved in the successful healing and reintegration of soldiers, whether they continue on active duty or become successful veterans. This book should serve as a valuable tool for learning about the resources and processes that will maximize each wounded, injured, or ill soldier s chances for success and be a resource for leaders. Information is provided about the Army Warrior Transition Command and key Army, federal agencies, veteran and military service organizations, and selected other organizations and their services and programs. Accessible information about essential principles, practices, and definitions in medical rehabilitation are included. Also presented are several vignettes on soldiers who have successfully adapted to their impairments to lead remarkable lives as soldiers or Army veterans. Although geared toward nonmedical personnel working with wounded, injured, and ill soldiers, the book has material of interest to a much broader audience. It is a must-read for anyone working within the Warrior Transition Command, or who is closely involved with or interested in assisting wounded, injured, and ill soldiers and their families. The European Agreement concerning the International Carriage of Dangerous Goods by Inland Waterways (ADN) was adopted at a conference held in May 2000 under the auspices of the United Nations Economic Commission for Europe (UNECE) and the Central Commission for the Navigation on the Rhine (CCNR). This two-volume publication includes the Final Act of the conference, the Resolution adopted, the Agreement and the annexed Regulations, as revised as of January 2007. It includes chapters on: general provisions; classification; dangerous goods list, special provisions and exemptions related to dangerous goods packed in limited quantities; provisions concerning the use of packagings, tank and bulk transport units; consignment procedures; requirements for the construction and testing of packagings, tanks and bulk transport units; requirements concerning the loading, carriage, unloading and handling of cargo; provisions for vessel crews, equipment, operation and documentation; and the rules for construction.

The study of provenance—the history of the creation and ownership of an artefact, work of art, or specimen—provides insights into the history of taste and collecting, illuminating the social, economic, and historic trends in which an object was created and collected. It is as much a history of people as it is of objects, and its study often reveals intricate networks of relationships, patterns of activity and motivations. This book promotes the study of the history of collecting and collections in all their variety through the lens of provenance, and explores the subject as a cross-disciplinary activity. Perhaps for the first time in a publication, it draws on expertise ranging from art history and anthropology, to natural

history and law, looking at periods from antiquity through the 18th century and the Holocaust era to the present, and materials from Europe and the Americas to China and the Pacific. The issues raised are wide-ranging, touching on aspects of authenticity, cultural meaning and material transformation and economic and commercial drivers, as well as collector and object biography. The book fills a gap in the study of collecting and provenance, taking the subject holistically and from multiple standpoints, better to reflect the widening interest in provenance from a range of disciplinary perspectives. This book will be a service to the field, from established scholars and museum professionals to students of collecting history, cultural heritage, and museum studies.

The PEERS® Curriculum for School-Based Professionals brings UCLA's highly acclaimed and widely popular PEERS program into the school setting. This sixteen-week program, clinically proven to significantly improve social skills and social interactions among teens with autism spectrum disorder, is now customized for the needs of psychologists, counselors, speech pathologists, administrators, and teachers. The manual is broken down into clearly divided lesson plans, each of which have concrete rules and steps, corresponding homework assignments, plans for review, and unique, fun activities to ensure that teens are comfortable incorporating what they've learned. The curriculum also includes parent handouts, tips for preparing for each lesson, strategies for overcoming potential pitfalls, and the research underlying this transformative program.

Why Critical Care Evolved METs? In early 2004, when Dr. Michael DeVita informed me that he was cons- ering a textbook on the new concept of Medical Emergency Teams (METs), I was surprised. At Presbyterian-University Hospital in Pittsburgh we int- duced this idea some 15 years ago, but did not think it was revolutionary enough to publish. This, even though, our fellows in critical care medicine training were all involved and informed about the importance of "C- dition C (Crisis)," as it was called to distinguish it from "Condition A (Arrest). "We thought it absurd to intervene only after cardiac arrest had occurred, because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems. The above thoughts were logical in Pittsburgh, where the legendary Dr. Peter Safar had been working since the late 1950s on improving current resuscitation techniques, ?rst ventilation victims of apneic from drowning, treatment of smoke inhalation, and so on. This was followed by external cardiac compression upon demonstration of its ef?ciency in cases of unexpected sudden cardiac arrest. Dr. Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation. He and many others emphasized the importance of getting the CPR team to o- of-hospital victims of cardiac arrest as quickly as possible.

The Gulf War bore witness to a number of deadly encounters between these two great adversaries. Heavily armoured, highly mobile and capable of killing at over 2500m the M1 Abrams is, to this day, a veritable fighting machine. Superior to both Iraq's Soviet era T-55 and T-62 tanks, nearly all sources claim that no Abrams tank has ever been destroyed by enemy fire. Despite entering service in 1980, the M1 Abrams remained untested in combat until the Gulf War in 1991, where it was to be confronted by its archenemy the Iraqi-assembled Soviet-designed T-72. Entering production in 1971, the T-72 arguably outstripped its contemporaries in a balance of mobility, protection and firepower. By the time of Operation Desert Storm, however, the tables had turned and the tank suffered due to low quality ammunition and poorly trained crews. In this fascinating study, Steven Zaloga pits these two great fighting machines against one another, plotting the development of the Cold War until both tanks met in combat in the deserts of Iraq and Kuwait.

A comprehensive resource on the recent developments of stem cell use in wound healing With contributions from experts in the field, Wound Healing offers a thorough review of the most recent findings on the use of stem cells to heal wounds. This important resource covers both the basic and translational aspects of the field. The contributors reveal the great progress that has been made in recent years and explore a wide range of topics from an overview of the stem cell process in wound repair to inflammation and cancer. They offer a better understanding of the identities of skin stem cells as well as the signals that govern their behavior that contributes to the development of improved therapies for scarring and poorly healing wounds. Comprehensive in scope, this authoritative resource covers a wealth of topics such as: an overview of stem cell regeneration and repair, wound healing and cutaneous wound healing, the role of bone marrow derived stems cells, inflammation in wound repair, role and function of inflammation in wound repair, and much more. This vital resource: Provides a comprehensive overview of stem cell use in wound healing, including both the basic and translational aspects of the field Covers recent developments and emerging subtopics within the field Offers an invaluable resource to clinical and basic researchers who are interested in wound healing, stem cells, and regenerative medicine Contains contributions from leading experts in the field of wound healing and care Wound Healing offers clinical researchers and academics a much-needed resource written by noted experts in the field that explores the role of stem cells in the repair and restoration of healing wounds.

The Carpatho-Balkan Geomorphological Commission and the International Association of Geomorphologists (IAG) Carpatho-Balkan-Dinaric Regional Working Group, promote networking between researchers and the exchange of research experience. Following a brief introduction into the geology, climate, hydrology and land cover of the Carpatho-Balkan-Dinaric region, the book provides detailed information on research applying both traditional and innovative techniques and summarizes contemporary knowledge on recent geomorphic processes. It also presents studies of exogenic geomorphic processes from each country. The chapters on Poland, the Czech Republic, Slovakia, Ukraine, Hungary, Romania, Slovenia, Croatia, Serbia, Bulgaria and Macedonia examine the geomorphic processes in shaping the topography of each country. This volume also examines key geomorphic processes influencing land use and economic activities as well as contributions discussing processes under climate change.

The baby boom generation's entry into old age has led to an unprecedented increase in the elderly population. The social and economic effects of this shift are significant, and in Research Findings in the Economics of Aging, a group of leading researchers takes an eclectic view of the subject. Among the broad topics discussed are work and retirement behavior, disability, and their relationship to the structure of retirement and disability policies. While choices about when to retire are made by individuals, these decisions are influenced by a set of incentives, including retirement benefits and health care, and this volume includes cross-national analyses of the effects of such programs on these decisions. Furthermore, the volume also offers in-depth analysis of the effects of retirement plans, employer contributions, and housing prices on retirement. It explores well-established relationships among economic circumstances, health, and mortality, as well as the effects of poverty and lower levels of economic development on health and life satisfaction. By combining micro and macro evidence, this volume continues a tradition of expanding the research agenda on the economics of aging.

Annotation Dairy products constitute one of the most important types of functional food. Edited by two of the leading authorities in this area, this major collection reviews how functional dairy products help to prevent such chronic diseases as cancer, osteoporosis and cardiovascular disease. Part 2 considers product development and such issues as clinical trials and safety evaluation. Part 3 examines particular types of product from oligosaccharides to lactic acid bacteria. CONTENTS Introduction: classifying functional dairy products. Part 1 The health benefits of functional dairy products: Cancer; Coronary heart disease; Osteoporosis; Probiotics and the management of food allergy; Dairy products and the immune function in the elderly; The therapeutic use of probiotics in gastrointestinal inflammation. Part 2 Functional dairy ingredients: Caseinophosphopeptides (CPPs) as functional ingredients; Oligosaccharides; Lactic acid bacteria (LAB) in functional dairy products; Conjugated linoleic acid (CLA) as a functional ingredient. Part 3 Product development: Enhancing the functionality of prebiotics and probiotics; Safety evaluation of probiotics; Clinical trials; Consumers and functional foods; European research in probiotics and prebiotics: the PROEUHEALTH cluster; The market for functional dairy products: the case of the United States.

C-XSC is a tool for the development of numerical algorithms delivering highly accurate and automatically verified results. It provides a large number of predefined numerical data types and operators. These types are implemented as C++ classes. Thus, C-XSC allows high-level programming of numerical applications in C and C++. The most important features of C-XSC are: real, complex, interval, and complex interval arithmetic; dynamic vectors and matrices; subarrays of vectors and matrices; dotprecision data types, predefined arithmetic operators with maximum accuracy; standard functions of high accuracy; multiple precision arithmetic and standard functions; rounding control for I/O data; error handling, and library of problem solving routines with automatic result verification. Thus, C-XSC makes the computer more powerful concerning the arithmetic. C-XSC is immediately usable by C programmers, easy to learn, user-extendable, and may also be combined with other tools. The book can be used as a textbook and as a reference manual. It consists of an introduction to advanced computer arithmetic, a chapter describing the programming languages C and C++, the major chapter "C-XSC Reference\

Recent Landform Evolution

Introduction Energy is necessary for a number of reasons, the most basic and obvious involve the preparation of food and the provision of heat to make life comfortable, or at least, bearable. Subsequently, a wide range of technological uses of energy have emerged and been developed, so that the availability of energy has become a central issue in society. The easiest way to acquire useful energy is to simply ?nd it as wood or a hydrocarbon fossil fuel in nature. But it has often been found to be advantageous to convert what is simply available in nature into more useful forms, and the processing and conversion of raw materials, especially petrochemicals have become a very large industry. Wood Wood has been used to provide heat for a great many years. In some cases, it can be acquired as needed by foraging, or cutting, followed by simple collection. When it is abundant there is relatively little need for it to be stored. However, many societies have found it desirable to collect more wood than is immediately needed during warm periods during the year, and to store it up for use in the winter, when the needs are greater, or its collection is not so convenient. One can still see this in some locations, such as the more remote communities in the Alps, for example. One might think of this as the oldest and simplest example of energy storage.

Classic and modern tools of genetics have been applied to hypertension research for some 20 years. This volume in the Handbook of Hypertension series aims to go beyond a simple summary of discoveries and provides a critical commentary on many controversial issues. It will be particularly useful for clinician scientists at all stages of their careers, graduate students and post-doctoral scientists as well as all those interested in cardiovascular medicine and research throughout the entire spectrum from bench to bedside. As in every relatively young area of research, the initial excitement over the early positive observations has not always been confirmed by subsequent larger studies with greater

statistical power. Issues related to current recommendations on design of studies and their analysis are therefore included. Pharmacogenetics and pharmacogenomics have been the subjects of many debates in recent years and are of particular importance in hypertension as life-long treatments, frequently with multiple drugs are given to millions of people world-wide. A critical appraisal of this controversial topic is provided. Several chapters on experimental genetics of hypertension with a special focus on physiological genomics are also included.

Since the Gulf War, the Abrams tank has undergone a transformation, while fighting in conflicts across the world. Its M1A1 and M1A2 variants have seen great improvements made to this iconic tank, including in fire-control, armour protection, and thermal imaging technology. Involvement in the conflicts in Iraq and Afghanistan necessitated a number of upgrades and modifications as the United States fought two of its longest wars. Recent years have seen new variants of the series such as the ABV Assault Breacher Vehicle and M104 Wolverine Heavy Assault Bridge. Over the past few decades, the M1A1 Abrams has also been extensively exported and is license produced in Egypt. The long-awaited follow-up to NVG 2 M1 Abrams Main Battle Tank 1982–92 (1993), this fully illustrated study examines the Abrams tanks' last quarter-century of service with both the United States and its various foreign operators with a focus on its combat history.

Cardiomyopathies are diseases of the heart muscle with diverse etiologies ranging from myocarditis to gene mutations. They are classified according to morphology and function, and then further categorized based on whether they are familial or non-familial and based on specific etiologies. This book examines the various cardiomyopathies, including arrhythmogenic cardiomyopathy, hypertrophic cardiomyopathy, and dilated cardiomyopathy, as well as their genetic basis.

In 1960, photographer William Claxton and noted German musicologist Joachim Berendt traveled the United States hot on the trail of jazz music. The result of their collaboration was an amazing collection of photographs and recordings of legendary artists as well as unknown street musicians. The book Jazzlife, the original fruit of their labors, has become a collector's item that is highly treasured among jazz and photography fans. In 2003, TASCHEN began reassembling this important collection of material? along with many never-before-seen color images from those trips. They are brought together in this updated volume, which includes a foreword by Claxton tracing his travels with Berendt and his love affair with jazz music in general. Utilizing the benefits of today's digital technology, a restored audio CD from Joachim Berendt's original recordings has been produced and is included in this package. Jazz fans will be delighted to be able to take a jazz-trip through time, both seeing and hearing the music as Claxton and Berendt originally experienced it. Featuring photographs of Charlie Parker, Count Basie, Duke Ellington, Muddy Waters, Gabor Szabo, Dave Brubeck, Stan Getz, Billie Holiday, Ella Fitzgerald, Miles Davis, Charlie Mingus, Thelonious Monk, John Coltrane, and many more Includes bonus CD of digitally remastered recordings of music made during Berendt and Claxton's journey (originally released in 1960 as two records)
